1 62 ada unit history: The HAWK Air Defense Missile System Marc Romanych, Jacqueline Scott, 2022-08-18 This is the first history of the legendary US Army's HAWK missile system, the world's first mobile air-defense missile system, which saw service and combat around the world. Designed to counteract the threat posed by advanced 1950s Soviet-built aircraft, the first HAWK unit became operational in 1959. At its peak, it saw frontline service in the Far East, Panama, Europe, and in the Middle East. Units were also used during the Cuban Missile Crisis, Vietnam War, and Persian Gulf War. In the hands of other nations, HAWK proved its efficacy in combat during the Arab-Israeli Wars, Iran-Iraq War, Chadian-Libyan War, and the Iraqi invasion of Kuwait. Credited with shooting down more than 100 aircraft during its combat career, the HAWK system was respected for its lethality. Such was Soviet concern, that the USSR developed electronic jammers, anti-radiation missiles, and other countermeasures specifically to degrade its effectiveness. The US retired its HAWK systems soon after the Cold War ended in 1991 when air defense priorities shifted from aircraft to ballistic missile defense, yet a modernized version of the system remains in service to this day in many nations. Packed with archive photos and original artwork, this is the first book about the HAWK system. Featuring research from HAWK technical and field manuals, interviews with HAWK veterans, and detailing the authors' personal experiences with HAWK missile units, it provides a comprehensive study of one of the most lethal and effective air missile systems of all time.

1 62 ada unit history: Ploughing New Ground Getnet Bekele, 2017 In October 2016, the Ethiopian administration declared a State of Emergency in response to anti-Government demonstrations and mass riots. Officially said to result from subversive activities channelled from Eritrea, Egypt and diasporic populations in the West, the evidence in fact suggests that the riots stemmed from widespread internal dissatisfaction. Large-scale land dispossessions following bilateral deals with transnational agribusiness, damming of major rivers, construction of sugar estates and industry parks as well as urban sprawl have put pressure on agricultural and rural areas. Today, displacement, drought and widening inequalities surround fears of severe food shortages and political instability. Drawing on informant testimonies, court archives, field reports and other sources, the author examines these developments in Ethiopia's lake region. He shows how transformations over time in spatial politics, state-society relations and the organization of production and exchange have influenced the situation today, and reveals the impact of these changes on a population of smallholder farmers for which agriculture is not only the mainstay of the national economy but a way of life. Getnet Bekele is Associate Professor of History at Oakland University, MI, where he teaches African History and the Environmental and Economic History of Africa and the Global South.
