Caloric Content and Macronutrients

Understanding the calorie and macronutrient composition of 1 pound ground turkey nutrition facts is fundamental for dietary planning. Ground turkey is primarily composed of protein, fat, and a small amount of carbohydrates. The total calorie content can vary depending on the fat percentage of the turkey used.

Calories in 1 Pound of Ground Turkey

On average, 1 pound (16 ounces) of raw ground turkey contains approximately 600 to 800 calories. This variation depends largely on the fat content, with leaner options providing fewer calories. For example, 93% lean ground turkey typically contains around 640 calories per pound, while higher fat blends may approach 800 calories.

Protein Content

Protein is the most abundant macronutrient in ground turkey. A pound of 93% lean ground turkey delivers about 90 to 100 grams of protein, making it an excellent source to support muscle maintenance and overall body function. Protein from turkey is complete, containing all essential amino acids needed by the human body.

Carbohydrates

Ground turkey contains negligible carbohydrates, usually less than 1 gram per pound. This makes it suitable for low-carb, ketogenic, and other carbohydrate-restricted diets.

Fat Content and Types of Ground Turkey

The fat content in 1 pound ground turkey nutrition facts varies by the specific type of ground turkey purchased. Fat influences not only the calorie content but also the flavor and texture of the meat.

Lean vs. Regular Ground Turkey

Ground turkey is often labeled according to its leanness, such as:

- 99% lean (1% fat)
- 93% lean (7% fat)
- 85% lean (15% fat)

Choosing a leaner turkey will reduce fat and calorie intake but may result in a drier texture when cooked.

Types of Fat in Ground Turkey

The fat found in ground turkey consists mainly of monounsaturated and polyunsaturated fats, which are considered healthier fats compared to saturated fat. However, turkey also contains some saturated fat, which should be consumed in moderation.

Fat Content per Pound

For 1 pound of 93% lean ground turkey, the fat content is approximately 35 to 45 grams. In comparison, 99% lean turkey contains roughly 10 to 15 grams of fat per pound.

Promotes Heart Health

Weight Management

Due to its high protein and relatively low-calorie profile, ground turkey is effective in promoting satiety and supporting weight control efforts.

Considerations and Cooking Tips

Several factors should be taken into account when selecting and preparing ground turkey to maximize its nutritional benefits.

Safe Handling Practices

Ground turkey must be cooked to an internal temperature of 165°F (74°C) to ensure food safety and prevent foodborne illnesses.

Choosing the Right Fat Content

Depending on dietary goals, selecting the appropriate fat percentage in ground turkey can balance nutrition with taste and texture preferences.

Cooking Methods
