beth hart mental health: Reframing Trauma Through Social Justice Catrina Brown, 2024-07-31 This cross-disciplinary volume examines and reframes trauma as a social and political issue in the context of wider society, critiquing the widely accepted pathologizing of trauma and violence in current discourse. Rooted in critical social theory, this insightful text reinvokes the critiques and analysis of the women's movement and the personal is political framing of trauma to unpack the mainstreaming of trauma discourse which has emerged today. Accomplished contributors address the social construction of femininity and masculinity in relation to trauma and violence, and advocate for a broader framing of trauma away from the constrained focus on pathologizing and diagnosing trauma, individual psychologizing and therapy. Instead, the book offers a fresh and compelling look at how discursive resistance, alternative feminist and narrative approaches to emotional distress and the mental health effects of violence can be developed alongside community-based, preventive, political and policy-based actions to create effective shifts in discourse, practice, policy and programming. This is fascinating reading for upper-level undergraduate and postgraduate students, researchers and academics in a broad range of fields of study, including psychology, social work, gender and women's studies and sociology, as well as for professionals, including policy makers, clinical psychologists and social workers.

beth hart mental health: *Bipolar for Psychotherapists and Their Clients* C. Raymond Lake, 2023-10-05 This unique book is needed because it aims to improve the care of Bipolar clients while strengthening the clinical practices of non-MD psychotherapists. What is different is the proposal that psychotherapists manage the overall care of Bipolar clients. The increased number of publications about Bipolar over the past decades has enhanced the recognition of Bipolar. As many as 16 million individuals in the US may have a Bipolar episode at some point. Psychiatrists have traditionally managed Bipolar clients but there are not enough psychiatrists and they generally spend only 10 to 15 minutes every one to six months with their clients—often not enough time to recognize oncoming Bipolar episodes. Therapeutic strategy has changed from treating acute episodes to postponing next episodes. Psychotherapists see their clients for 50 minutes every week and are in a better position to recognize developing episodes. Psychotherapists do not prescribe and medicines are usually needed along with psychotherapy for best results. This book encourages psychotherapists to vet and collaborate with prescribers in caring for the therapists' Bipolar clients. Lacking in the psychotherapists' armamentarium for treating Bipolar clients is education regarding diagnostic signs, symptoms, and treatment including the most productive medications. This book provides therapists and clients the needed information and encourages academic departments and other psychotherapy programs to institute training about Bipolar Disorders.

beth hart mental health: Handbook of Evidence-Based Mental Health Practice with Sexual and Gender Minorities John E. Pachankis, Steven A. Safren, 2019-04-01 Historically, mental health clinical research has taken inadequate account of psychosocial disorders experienced by those who identify as sexual and gender minorities, however, researchers have recently begun developing and adapting evidence-based mental health treatment approaches for use with these groups. Handbook of Evidence-Based Mental Health Practice with Sexual and Gender Minorities offers a comprehensive array of evidence-based approaches for treating sexual and gender minority clients' mental health concerns. The interventions detailed here span a diverse spectrum of populations, including sexual and gender minority youth, transgender populations, same-sex couples, sexual minority parents, and bisexual individuals. Chapters also address numerous mental and behavioral health problems, including anxiety disorders, depression, substance abuse, trauma, body image disturbance, and sexual health. In addition to an overview of the research evidence supporting each clinical presentation and approach, chapters contain practical how-to guidance for therapists to use in their clinical practice. This book reflects a true integration of the best of sexual and gender minority research and the best of evidence-based practice research, presented by the leading experts in the field. As such it is essential reading for mental health professionals who work with these groups, as well as trainees in social work, counseling, and clinical psychology.

beth hart mental health: Psychiatric Oppression in Women's Lives Emma Tseris, Scarlett Franks, Eva Bright Hart, 2024-10-12 This book provides a comprehensive analysis of women's experiences within mental health services, demonstrating the need for a radical paradigm shift in how women's distress and experiences are understood. Drawing on extensive fieldwork on coercive mental health treatment, including interviews, participatory action research, arts-based research, and public sociology, the book centres the knowledge, skills, and creativity of psychiatrised women. Informed by intersectional feminism and critical mental health theory, the book explores the interlocking oppressions of psychiatric harm and patriarchal power, alongside women's survivorship and resistances. Areas covered include the pathologisation of women's emotions within mental health services, violence and deprivations in involuntary treatment, the surveillance of mothering, and social exclusions arising from psychiatric diagnoses. The book highlights the ability of collective and creative research processes to move beyond the task of documenting psychiatric harm, towards imagining rich alternatives to biomedical, therapeutic, and carceral practices in mental health. It offers a critique of the notions of 'benevolence' and 'expertise', which are commonly used to justify psychiatric coercion. It will appeal to students and scholars working across the fields of critical mental health, sociology, social work, psychiatry, mental health nursing and gender studies. Emma Tseris is senior lecturer in Social Work and Policy Studies at the University of Sydney, Australia, researching feminist and critical mental health theory. She is the author of *Trauma, Women's Mental Health and Social Justice: Pitfalls and Possibilities* (2019) and co-author of *Using Social Research for Social Justice* (2023). Scarlett Franks is a survivor researcher from the University of Sydney, Australia, who also serves on the Survivor College of the National Centre for Action on Child Sexual Abuse, the board of directors of the Grace Tame Foundation, and the Advisory Panel of the NSW Office of the Anti-Slavery Commissioner. Eva Bright Hart is a feminist survivor researcher from the University of Sydney, Australia. She is a senior social worker and public health professional from a rural area. Eva is also known as a mother, teacher, gardener, cook, author, activist and artist. As a survivor of psychiatric and gendered violence Eva uses a protective pseudonym so she can contribute without the fear of further discrimination, disablement and involuntary psychiatric treatment for herself and her family. Eva means living one.

beth hart mental health: Care of the Mentally Disordered Offender in the Community Alec Buchanan, Lisa Wootton, 2017-10-05 This revised and updated edition of *Care of the Mentally Disordered Offender in the Community* provides a comprehensive, evidence-based guide to theory and practice. The social and clinical context within which mental health care is provided to offenders in community settings has changed significantly in recent years. An increasing proportion of all mental health care is provided in the community and our knowledge of the links between violence and mental illness has advanced. Existing psychological and pharmacological treatments have been refined and new treatments have been introduced. Epidemiological and intervention-based research has evaluated these changes and suggested new avenues for clinical development. Over three sections, the second edition of *Care of the Mentally Disordered Offender in the Community* explores the key areas of the field. Part 1 describes the social, administrative and clinical context within which care is now given. Part 2 discusses treatment and the evaluation of violence risk when determining the most appropriate treatment. Part 3 explores psychiatric services and their relationship with other agencies. The text has been updated to cover recent developments in theory and practice. New chapters have been added that cover US provision for people with mental disorders leaving prison, the community management of sexual offenders, the relationship between care and coercion and the treatment of personality disorders. Written by a global team of experts, the book provides critical insights into the social, clinical, and institutional aspects of an increasingly important part of psychiatric community care.

beth hart mental health: Mental Illness in Popular Media Lawrence C. Rubin, 2014-01-10 Whether in movies, cartoons, commercials, or even fast food marketing, psychology and mental

illness remain pervasive in popular culture. In this collection of new essays, scholars from a range of fields explore representations of mental illness and disabilities across various media of popular culture. Contributors address how forms of psychiatric disorder have been addressed in film, on stage, and in literature, how popular culture genres are utilized to communicate often confusing and conflicted relationships with the mentally ill, and how popular cultures around the world reflect mental illness and disability. Analyses of sources as disparate as the Batman films, Broadway musicals and Nigerian home movies reveal how definitions of mental illness, mental health, and of psychology itself intersect with discourses on race, gender, law, capitalism, and globalization. beth hart mental health: The American Psychiatric Publishing Textbook of Personality Disorders John M. Oldham, Andrew E. Skodol, Donna S. Bender, 2014-05-05 This new edition of The American Psychiatric Publishing Textbook of Personality Disorders has been thoroughly reorganized and updated to reflect new findings, expanded treatment options and considerations, and future directions, such as translational research, enhancing the text's utility while maintaining its reputation as the foremost reference and clinical guide on the subject. In four exhaustive and enlightening sections, the book covers basic concepts of personality disorders, etiology, clinical assessment, diagnosis, and treatment, and it addresses special issues that may arise with specific populations or settings. In addition, the text offers many features and benefits: Several chapters describe the intense efforts to identify the scientifically strongest -- and clinically relevant -- approaches to conceptualizing and enumerating personality traits and pathology. The book does not sidestep ongoing controversies over classification but addresses them head-on by including chapters by experts with competing perspectives. The hybrid dimensional/categorical alternative model of classification for personality disorders included in the DSM-5 is included in an appendix and thoroughly referenced throughout the volume and discussed in detail in several chapters. Coverage of current research is up-to-date and extensive. Longitudinal naturalistic studies, which have shown surprising patterns of improvement in patients with selected personality disorders, as well as new and more rigorous treatment studies, have yielded critical findings in recent years, all of which are thoroughly addressed. Dozens of vivid and detailed case examples are included to illustrate diagnostic and treatment concepts. The editors have selected a roster of contributors second to none, and the text has been scrupulously edited for consistency of language, tone, and coverage. As clinical populations become better defined, new and more rigorous treatment studies are being conducted with increasingly promising results. The American Psychiatric Publishing Textbook of Personality Disorders offers clinicians, residents, and trainees in all disciplines a front row seat for the latest findings and clinical innovations in this burgeoning field.

It's a new publication format in which state-of-the-art computer algorithms are applied to select the most relevant articles published in Springer Nature journals and create machine-generated literature reviews by arranging the selected articles in a topical order and creating short summaries of these articles.
