better me trauma quiz: *Trauma Informed Teaching through Play Art Narrative (PAN)* Karen O. Wallace, Patrick J. Lewis, 2020-06-02 Trauma affects the lives of many children who we teach in school. It effects the students, teachers who teach them, the administration, and the school community as it is part of the school environment and culture. Teachers and administrators have great potential to set up an environment and adopt an attitude that can help heal the trauma in the lives of their students. Schools need to become trauma-informed to be able to provide for the growing number of refugee children who have experienced terrorism, crime, war, and abuse, to better help some Indigenous children who due to systemic racism and discriminatory policies have been traumatised and live daily with trauma, and the growing number of all children who have experienced various kinds of trauma during their life span. Trauma informed schools means that all students can feel safe enough to learn, succeed academically and thrive after having undergone a traumatic event. Trauma Informed Teaching demonstrates how Play Art Narrative (PAN) can be instrumental in creating trauma informed schools. The authors provide play, art, and narrative techniques and activities that educators can use to safely work therapeutically with traumatised children and youth.

better me trauma quiz: The Make-or-Break Year Emily Krone Phillips, 2019-01-08 A Washington Post Bestseller An entirely fresh approach to ending the high school dropout crisis is revealed in this groundbreaking chronicle of unprecedented transformation in a city notorious for its failing schools In eighth grade, Eric thought he was going places. But by his second semester of freshman year at Hancock High, his D's in Environmental Science and French, plus an F in Mr. Castillo's Honors Algebra class, might have suggested otherwise. Research shows that students with more than one semester F during their freshman year are very unlikely to graduate. If Eric had attended Hancock—or any number of Chicago's public high schools—just a decade earlier, chances are good he would have dropped out. Instead, Hancock's new way of responding to failing grades, missed homework, and other red flags made it possible for Eric to get back on track. The Make-or-Break Year is the largely untold story of how a simple idea—that reorganizing schools to get students through the treacherous transitions of freshman year greatly increases the odds of those students graduating—changed the course of two Chicago high schools, an entire school system, and thousands of lives. Marshaling groundbreaking research on the teenage brain, peer relationships, and academic performance, journalist turned communications expert Emily Krone Phillips details the emergence of Freshman OnTrack, a program-cum-movement that is translating knowledge into action—and revolutionizing how teachers grade, mete out discipline, and provide social, emotional, and academic support to their students. This vivid description of real change in a faulty system will captivate anyone who cares about improving our nation's schools; it will inspire educators and families to reimagine their relationships with students like Eric, and others whose stories affirm the pivotal nature of ninth grade for all young people. In a moment of relentless focus on what doesn't work in education and the public sphere, Phillips's dramatic account examines what does.

better me trauma quiz: *When Trauma Survivors Return to Work* Barbara Barski-Carrow, 2010-04-27 *When Trauma Survivors Return To Work* explains how managers and co-workers can help foster the process of emotional recovery for employees who have been traumatized and are returning to work. No other source clearly and positively teaches managers and co-workers how to

treat fellow workers returning to the workplace after experiencing a rape, a burglary, an armed assault, a violent accident, or witnessing a brutal crime. No one explains what to say to those who have just been told they have a terminal illness, or how to treat an employee whose close family member has committed suicide. It is not helpful for co-workers to deny such traumatic events or remain silent, which is what often happens, or for managers to avoid directly communicating with the traumatized employee. Is there something that managers and co-workers can do to be truly helpful to such sensitively wounded people? The answer is yes. In this illuminating educational approach, Dr. Barski-Carrow shows how managers and co-workers can learn simple ways to make the workplace a better environment for emotional healing. Barski-Carrow offers a simple, well-researched way to provide those basic practical skills and, with absorbing stories, shows how relationships in the workplace can indeed provide a healing force for traumatic experiences.
