big bang theory relationships: Romantic Relationships and Media Valerie Ellen Kretz, 2024-12-15 In this book, Valerie Kretz utilizes examples from pop culture and everyday life to provide an examination of current research on romantic relationships and media, with an emphasis on entertainment and digitally-mediated communication. By dividing the book into two major sections - relationship trajectories and different aspects of relationships - Kretz establishes a framework through which to explore relevant theoretical and empirical findings, drawing on established literature, examples in the media, and the lived experiences of interview participants. Kretz covers a wide range of topics through these frameworks, including online dating, representations of love in film and television, social media and romantic jealousy, parasocial romance, and digital breakups, among others. Ultimately, Kretz argues that all available evidence demonstrates the complexity of this intersection, due to the separate roles that several distinct factors like medium, content, social context, frequency of use, and individual differences all play a role in how these intersections are constructed in the real world. Finally, the book identifies potential directions for future research as scholars continue to unpack this complex relationship.

big bang theory relationships: *The Routledge Companion to Masculinity in American Literature and Culture* Lydia R. It is an examination of the ways in which gender affects our capacity to engage ethically with each other in complex human societies. This volume offers essays from a range of established, global experts in American masculinity as well as new and upcoming scholars in order to explore not just what masculinity once meant, has come to mean, and may mean in the future in the U.S.; it also articulates what is at stake with our conceptions of masculinity.

big bang theory relationships: *The Interdependence of Teaching and Learning* Bryant Griffith, Douglas J. Loveless, 2013-03-01 The varied chapters of this book seek to capture the complexities of teaching and learning in today's schools, and they share an interest in exploring the influences of knowledge construction in the moment and over time. Teaching and learning are human processes, interrelated and dynamic. We assembled this collection to unpack what it means to teach and to learn, teasing out some of the implications and challenges of such complicated educational processes that are often misconstrued as causal or linear. As educators currently residing in the United States, we find this a particularly pressing agenda, given the current focus on common core standards and reducing teaching and learning to conceptual and pedagogical step-by-step procedures. Our primary concern in putting together this book was to provide a conceptual and political foundation from which to construct and defend understandings and practices of teaching and learning that embody the complexity of educational endeavors and relationships. The isolation of teaching from learning, and the othering of both teachers and students, one from the other, suggests that knowledge is synonymous with information. This book challenges such assumptions. The project underlying this text can be seen as a means of rethinking how teachers' and students' perspectives of practice and curriculum influence what learning opportunities are provided to students. Chapters written by established and new thinkers in the field of education demonstrate the ways in which teachers reformulate relationships between teaching and learning in school settings. Our second objective is to examine local constructions of knowledge over time and how those constructions are consequential for teacher and student learning. By examining patterns of practice and processes of knowledge construction in elementary, secondary, and undergraduate classrooms, the authors of these chapters lay a foundation for examining commonalities and differences in the construction of knowledge and practices across educational levels, disciplines, and in-school and out-of-school settings.

big bang theory relationships: *Postmillennial Trends in Anglophone Literatures, Cultures and Media* Soňa Šnircová, 2019-02-08 The book offers a collection of papers that draw on contemporary developments in cultural studies in their discussions of postmillennial trends in works of Anglophone literature and media. The first section of the book, "Addressing the Theories of a New Cultural Paradigm", comprises ten essays that present, respectively, performatist, metamodernist, digimodernist, and hypomodernist readings of selected texts in order to test the usefulness of recent theories in explorations of the new paradigm in literary, media and food studies. The papers cover a wide variety of genres, including the novel, the film, the documentary, the cookbook, the food magazine, and the food commercial, and present a number of themes which shed light on the nature of the new paradigm. The second part of the volume, "Mapping the Dynamics of a New Sensibility", offers a wider perspective and presents seven papers that search for evidence of a new sensibility in selected examples of postmillennial texts. These contributions move beyond the frameworks of the theories explored in the first part in order to offer new perspectives in the contributors' respective fields of interest.

big bang theory relationships: *Television Comedy and Femininity* Rosie White, 2018-11-30 Can comedy on television harbour elements of gender transgression or subversion? If a man is permitted to be 'funny peculiar' – playing the underdog or misfit – does a woman seem stranger in his place? Mapping examples from British and American comedy television over the past 60 years, from *I Love Lucy* to *The Big Bang Theory* and *Smack the Pony* to *Waiting For God*, this book asks: are particular forms of television comedy gendered in specific ways? Paying attention to series

which have not been addressed in academic work, as well as more established shows, White offers fresh insights for the fields of television studies, gender and women's studies, cultural history and comedy.

big bang theory relationships: Love Story D. A. Fletcher, 2012-06-20 Being a Christian does not mean never having to say you're sorry - that's ridiculous. In fact, we American Christians may have so much to apologize for before we can begin to mount an apologetic, we seem to have lost our voice with the lost and all credibility for the Gospel. In each our own individual act of idolatry, we have each chosen our own Jesus to match our beliefs, rather than choosing our beliefs to match Jesus. We have recreated God in our own image and we have lost our way. Love Story isolates on some large, vitally important ways that we have drifted from our faith, making it much more American than Godly - we have become idolators of individualism, freedom, democracy, capitalism and even idolators of America itself. We have little understanding of suffering, little to say about the meaning of life, and we've missed entirely the spectacular nature of the universe and life. We have much to unlearn before we can dare to speak of our faith.

This collection of new essays first situates the millennials within their historical context and then proceeds to an examination of specific characteristics--as addressed in the television and film narratives created about them, including their relationship to work, technology, family, religion, romance and history. Drawing on a multiplicity of theoretical frameworks, the essays show how these cultural products work at a number of levels, and through a variety of means, to shape our understanding of the millennials.
