In this fresh, carefully researched book, New York Times reporter Steven Greenhouse explores the economic, political, and social trends that are transforming America's workplaces, including the decline of the social contract that created the world's largest middle class and guaranteed job security and good pensions. Bouza, 2013-11-11 No segment of American society is spared from Bouza's critical gaze in exposing the systemic excesses that are poisoning the heart of our nation. He unmask the politicians, on both ends of the political spectrum, whose arrogance and hypocrisy speak volumes. He demonstrates how organized crime, while catering to our sinful, illicit cravings, affects our daily lives from buying a fish dinner to building a house. He uncloaks the televangelists and other fraudulent religious leaders who have transformed the ministry from a shepherd's leading the flock into a huckster's fleecing the gullible. Moreover, he reveals the abuses that have permeated the medical and other helping professions

biggest lawsuits in us history: Laws of Image Samantha Barbas, 2015-09-30 Americans have long been obsessed with their images—their looks, public personas, and the impressions they make. This preoccupation has left its mark on the law. The twentieth century saw the creation of laws that protect your right to control your public image, to defend your image, and to feel good about your image and public presentation of self. These include the legal actions against invasion of privacy, libel, and intentional infliction of emotional distress. With these laws came the phenomenon of personal image litigation—individuals suing to vindicate their image rights. *Laws of Image* tells the story of how Americans came to use the law to protect and manage their images, feelings, and reputations. In this social, cultural, and legal history, Samantha Barbas ties the development of personal image law to the self-consciousness and image-consciousness that has become endemic in

our media-saturated culture of celebrity and consumerism, where people see their identities as intertwined with their public images. The laws of image are the expression of a people who have become so publicity-conscious and self-focused that they believe they have a right to control their images—to manage and spin them like actors, politicians, and rock stars.

biggest lawsuits in us history: Career Movies Jack Boozer, 2010-01-01 Achieving the American Dream became inextricably linked with career/business success after World War II, as an increasingly consumerist America learned to define the dream through possessions and status. Not surprisingly, Hollywood films in the postwar years reflected the country's preoccupation with work and career success, offering both dramatic and comedic visions of the career quest and its effects on personal fulfillment, family relations, women's roles, and the creation (or destruction) of just and caring communities. In this book, Jack Boozer argues that the career/business film achieved such variety and prominence in the years between 1945 and 2001 that it should be considered a legitimate film genre. Analyzing numerous well-known films from the entire period, he defines the genre as one in which a protagonist strives for career success that often proves to be either elusive despite hard work, or unfulfilling despite material rewards and status. Boozer also explores several distinct subgenres of the career movie—the corporate executive films of the 1950s; the career struggles of (single, married, and/or parenting) women; the entrepreneurial film as it is also embodied in texts about immigrants and racial and ethnic minorities and business-oriented femmes fatales; the explosion of promotionism and the corporatization of employment; and, finally, the blurring of work and private life in the brave new world of the televirtuality film.

biggest lawsuits in us history: Corporations and Human Rights Niels Beisinghoff, 2009 Can human rights be enforced against corporations? This work analyses different enforcement mechanisms. It examines one of the most powerful instruments: the Alien Tort Claims Act (ATCA) litigation in the United States. The ATCA has been used as one of the chief weapons in a 21st-century battle over corporate responsibility in the age of globalization. For instance, the ATCA has been invoked to seek compensation from German companies in respect of forced labor during the Holocaust. Further examples include claims relating to genocide against a Canadian company, forced labor claims against a US company and numerous others. The ATCA litigation often refers to the «law of nations», but do the US courts interpret this term consistently with other accepted interpretations of international law? The short answer to that question is 'no'. However, in the absence of enforceable international law mechanisms, this lacuna needs to be filled. Domestic litigation of matters that are inherently transnational in character, as occurs in ATCA human rights litigation, represents a viable mechanism to enforce human rights.
