Notable Multi-Vehicle Pileups

Multi-vehicle pileups are among the most notorious types of car crashes in history due to their scale and complexity. These accidents often occur on highways or freeways with heavy traffic and can involve dozens of vehicles. Poor visibility, high speeds, and sudden braking are common factors that contribute to these pileups. Some of the biggest car crashes in history have involved more than 100 vehicles, resulting in extensive damage and numerous injuries.

California Freeway Pileup (2007)

One of the largest multi-vehicle crashes occurred on a foggy morning on a busy California freeway. The accident involved over 100 vehicles, including cars, trucks, and motorcycles. Reduced visibility and slippery road conditions led to a chain reaction of collisions. Fortunately, emergency responders were able to manage the situation relatively quickly, but the incident caused significant traffic disruption and highlighted the dangers of driving in adverse weather conditions.

Texas Pileup on I-35 (2013)

In Texas, a massive pileup on Interstate 35 involved more than 50 vehicles during heavy fog. The pileup resulted in multiple fatalities and dozens of injuries. This crash underscored the importance of reduced speeds and heightened caution in poor weather conditions. Several trucks were involved, which exacerbated the severity of the collision and complicated rescue efforts.

Other Significant Pileups

Other notable pileups include accidents in European countries, such as a 200-car pileup in Belgium during a snowstorm, and a 70-vehicle crash in South Korea caused by icy roads. These incidents collectively illustrate how environmental factors and driver behavior can combine to produce some of the biggest car crashes in history.

Deadliest Car Crashes in History

The deadliest car crashes in history often involve a combination of factors including excessive speed, impaired driving, and poor road conditions. These catastrophic events have led to high fatality counts and have driven significant changes in traffic regulations and vehicle safety standards.

The 1988 Dhaka Bus Crash

One of the deadliest car-related crashes occurred in Dhaka, Bangladesh, where a bus collided with a speeding truck on a narrow road. The accident resulted in over 50 fatalities and numerous injuries. Overcrowded vehicles and inadequate road infrastructure were key contributors to the severity of this crash.

Mexico City Highway Crash (2006)

A tragic accident on a busy highway in Mexico City involved a passenger bus colliding with multiple vehicles during rush hour. The crash claimed more than 40 lives and injured many more. Investigations highlighted driver fatigue and vehicle maintenance issues as major contributing factors.

Fatal Pileup in Poland (2014)

biggest car crashes in history: Saving Ourselves from Big Car David Obst, 2025-09-16 Cars are killing people and making the planet uninhabitable. Crashes take the lives of more than a million people around the world each year. Air pollution linked to motor vehicles contributes to even more untimely deaths. Highways and unsafe streets have devastated cities, yet traffic congestion still swallows up countless hours. And carbon emissions from transportation are a key driver of climate change, which now threatens to make the world unlivable. Why do we still worship at the altar of the car? How can we find alternatives that are healthier for the planet and ourselves? This book exposes how "Big Car"—the complex of companies in the automobile, oil, insurance, media, and concrete industries that promote and entrench car dependence—has pursued profit at the expense of the common good. David Obst explores how Big Car gained almost immeasurable influence over our lives, weighing the benefits and the costs of reliance on private automobiles. He details how industry covered up the harms of lead additives, fought against seatbelts, and continues to fund climate-change denialism. Obst considers the future of mobility, surveying how cities—from Taipei to Tempe, Copenhagen to Chicago—are experimenting with forms of transportation that offer alternatives to the dominance of cars. Provocative and comprehensive, *Saving Ourselves from Big Car* is a powerful wake-up call for us to change how we use cars before it's too late.

biggest car crashes in history: EMI Films and the Limits of British Cinema Paul Moody, 2018-10-19 This book is the first of its kind to trace the development of one of the largest and most important companies in British cinema history, EMI Films. From 1969 to its eventual demise in 1986, EMI would produce many of the key works of seventies and eighties British cinema, ranging from popular family dramas like *The Railway Children* (Lionel Jeffries, 1970) through to critically acclaimed arthouse successes like *Britannia Hospital* (Lindsay Anderson, 1982). However, EMI's role in these productions has been recorded only marginally, as footnotes in general histories of British cinema. The reasons for this critical neglect raise important questions about the processes involved

in the creation of cultural canons and the definition of national culture. This book argues that EMI's amorphous nature as a transnational film company has led to its omission from this history and makes it an ideal subject to explore the 'limits' of British cinema.

Earthquakes give us natural springs; volcanoes produce fertile soil. It is only when these forces exceed our ability to withstand them that they become disasters. Together they have shaped our cities and their architecture; elevated leaders and toppled governments; influenced the way we think, feel, fight, unite, and pray.

The history of natural disasters is a history of ourselves. In *The Big Ones*, leading seismologist Dr. Lucy Jones offers a bracing look at some of the world's greatest natural disasters, whose reverberations we continue to feel today. At Pompeii, Jones explores how a volcanic eruption in the first century AD challenged prevailing views of religion. She examines the California floods of 1862 and the limits of human memory. And she probes more recent events--such as the Indian Ocean tsunami of 2004 and the American hurricanes of 2017--to illustrate the potential for globalization to humanize and heal. With population in hazardous regions growing and temperatures around the world rising, the impacts of natural disasters are greater than ever before. *The Big Ones* is more than just a work of history or science; it is a call to action. biggest car crashes in history: Sanctuary Patrick Barrett, Susy Flory, 2022-03-15 For decades, his family rescued lost and forgotten donkeys in the Irish countryside. He had no idea that one day, the donkeys would rescue him. Patrick Barrett grew up on the back of a donkey. In the small village of Liscarroll, the young boy helped his family run a sanctuary for abandoned and abused donkeys. Struggling in school, Patrick only felt truly accepted in the presence of these funny, fuzzy, touching animals. It was like magic, how he and the donkeys understood each other. He became a true “donkey whisperer”—reading their body language, communicating with them in ways they could understand, and teaching himself how to “speak” in their distinctive calls. But when Patrick was of age, he shipped out with the Irish Army and encountered unimaginable wartime horrors in Lebanon and Kosovo. In the aftermath, he returned home a broken man, sinking into the depths of PTSD and addictions. He believed nothing could save him. But he hadn't counted on the donkeys. *Sanctuary* is the remarkable true story of how faith turned one lost man's life around with

the help of the rescue animals who loved him. It's an antidote to despair and a call to hope, revealing the beauty and wonder of Ireland as you've never seen it before.

biggest car crashes in history: The Real Crash Peter Schiff, 2024-03-26 This book is one of the best assets conservatives can turn to in making the case for fiscal responsibility and capitalism. —Grover Glen Norquist, president of Americans for Tax Reform In The Real Crash, New York Times–bestselling author Peter D. Schiff argues that America is enjoying a government-inflated bubble, one that reality will explode . . . with disastrous consequences. Schiff demonstrates how the infusion of billions of dollars of stimulus money has only dug a deeper hole: the United States government simply spends too much and does not collect enough money to pay its debts, and in the end, Americans from all walks of life will face a crushing consequence. Our system is broken, Schiff says, and there are only two paths forward. The one we're on now leads to a currency and sovereign debt crisis that will utterly destroy our economy and impoverish the vast majority of our citizens. If we want to avoid complete collapse, we must drastically reduce government spending—eliminate entire agencies, end costly foreign military escapades and focus only on national defense—and stop student loan or mortgage interest deductions, as well as drug wars and bank-and-business bailouts. We must also do what no politician or pundit has proposed: America should declare bankruptcy, restructure its debts, and reform our system from the ground up. Persuasively argued and provocative, The Real Crash explains how we got into this mess, how we might get out of it, and what happens if we don't. And, with wisdom born from having predicted the Crash of 2008, Peter Schiff explains how to protect yourself, your family, your money, and your country against what he predicts.

biggest car crashes in history: *A Big Fat Crisis* Deborah Cohen, 2013-12-24 Obesity is the public health crisis of the twenty-first century. Over 150 million Americans are overweight or obese, and across the globe an estimated 1.5 billion are affected. In *A Big Fat Crisis*, Dr. Deborah A. Cohen has created a major new work that will transform the conversation surrounding the modern weight crisis. Based on her own extensive research, as well as the latest insights from behavioral economics and cognitive science, Cohen reveals what drives the obesity epidemic and how we, as a nation, can overcome it. Cohen argues that the massive increase in obesity is the product of two forces. One is the immutable aspect of human nature, namely the fundamental limits of self-control and the unconscious ways we are hard-wired to eat. And second is the completely transformed modern food environment, including lower prices, larger portion sizes, and the outsized influence of food advertising. We live in a food swamp, where food is cheap, ubiquitous, and insidiously marketed. This, rather than the much-discussed food deserts, is the source of the epidemic. The conventional wisdom is that overeating is the expression of individual weakness and a lack of self-control. But that would mean that people in this country had more willpower thirty years ago, when the rate of obesity was half of what it is today! The truth is that our capacity for self-control has not shrunk; instead, the changing conditions of our modern world have pushed our limits to such an extent that more and more of us are simply no longer up to the challenge. Ending this public health crisis will require solutions that transcend the advice found in diet books. Simply urging people to eat less sugar, salt, and fat has not worked. *A Big Fat Crisis* offers concrete recommendations and sweeping policy changes-including implementing smart and effective regulations and constructing a more balanced food environment-that represent nothing less than a blueprint for defeating the obesity epidemic once and for all.
