biggest mechanical engineering companies: *The Caste of Merit* Ajantha Subramanian,

2019-12-03 How the language of "merit" makes caste privilege invisible in contemporary India. Just as Americans least disadvantaged by racism are most likely to endorse their country as post-racial,

Indians who have benefited from their upper-caste affiliation rush to declare their country post-caste. In *The Caste of Merit*, Ajantha Subramanian challenges this comfortable assumption by illuminating the controversial relationships among technical education, caste formation, and economic stratification in modern India. Through in-depth study of the elite Indian Institutes of Technology (IITs)—widely seen as symbols of national promise—she reveals the continued workings of upper-caste privilege within the most modern institutions. Caste has not disappeared in India but instead acquired a disturbing invisibility—at least when it comes to the privileged. Only the lower castes invoke their affiliation in the political arena, to claim resources from the state. The upper castes discard such claims as backward, embarrassing, and unfair to those who have earned their position through hard work and talent. Focusing on a long history of debates surrounding access to engineering education, Subramanian argues that such defenses of merit are themselves expressions of caste privilege. The case of the IITs shows how this ideal of meritocracy serves the reproduction of inequality, ensuring that social stratification remains endemic to contemporary democracies.

biggest mechanical engineering companies: Big Little Breakthroughs Josh Linkner, 2021-04-20 The pressure to generate big ideas can feel overwhelming. We know that bold innovations are critical in these disruptive and competitive times, but when it comes to breakthrough thinking, we often freeze up. Instead of shooting for a \$10-billion payday or a Nobel Prize, the most prolific innovators focus on Big Little Breakthroughs—small creative acts that unlock massive rewards over time. By cultivating daily micro-innovations, individuals and organizations are better equipped to tackle tough challenges and seize transformational opportunities. How did a convicted drug dealer launch and scale a massively successful fitness company? What core mindset drove LEGO to become the largest toy company in the world? How did a Pakistani couple challenge the global athletic shoe industry? What simple habits led Lady Gaga, Banksy, and Lin-Manuel Miranda to their remarkable success? Big Little Breakthroughs isn't just for propeller-head inventors, fancy-pants CEOs, or hoodie-donning tech billionaires. Rather, it's a surpassingly simple system to help everyday people become everyday innovators.

biggest mechanical engineering companies: Doing Engineering Joyce Tang, 2000-01-12 The first to systematically compare Caucasians, African Americans, and Asian Americans in engineering, this study of the career attainment and mobility of engineers in the United States tells how these

three groups fare in the American engineering labor market and what they can look forward to in the future. The numbers of black and Asian engineers recently have grown at a much faster rate than the number of Caucasian engineers. With a projected steady increase in engineering jobs and demographic shifts, this trend should continue. Yet, recent writings on the engineering profession have said little about career mobility beyond graduation. This book identifies and explores key issues determining whether minorities in the US will attain occupational equality with their Caucasian counterparts. Highlighting implications for theory, policy making, and the future of the profession, *Doing Engineering* offers important insights into labor, race and ethnicity that will be of interest to anyone studying stratification in a wide range of professional occupations.
