Overview of Big Hill Bayou Wildlife Management Area

The Big Hill Bayou Wildlife Management Area (WMA) is situated in southwestern Arkansas and encompasses thousands of acres of forested wetlands, bayous, and upland hardwoods. This WMA is managed by the Arkansas Game and Fish Commission (AGFC) to preserve native wildlife habitats and provide sustainable outdoor recreation. The diverse landscape includes bottomland hardwood forests, cypress-tupelo swamps, and mixed pine and hardwood uplands, creating a mosaic of habitats that support a wide range of species. The area plays a crucial role in protecting water quality and maintaining biodiversity in the region. Moreover, Big Hill Bayou WMA contributes to the conservation of migratory birds along the Mississippi Flyway, making it an essential stopover for waterfowl and other migratory species.

Geographic Location and Size

Big Hill Bayou WMA covers approximately 7,000 acres, primarily located in Sevier County and parts of neighboring counties. The bayou itself is a slow-moving waterway that meanders through this landscape, providing vital wetland habitat. The location's proximity to other conservation lands enhances its ecological connectivity, allowing wildlife to move freely across a broader range.

Historical Background

The area was originally acquired by the state in the mid-20th century to protect waterfowl habitat and promote hunting opportunities. Since then, it has been managed carefully to balance habitat restoration with public access. Over the decades, restoration projects have improved wetland function and forest health, supporting ecosystem resilience and diversity.

Flora and Fauna of the Area

Big Hill Bayou Wildlife Management Area boasts a rich variety of plant and animal species adapted to its wetland and upland environments. The combination of bayous, swamps, and forested areas creates ideal conditions for diverse ecosystems. This section explores the key species and their habitats within the WMA.

Native Plant Communities

The dominant vegetation includes bottomland hardwood species such as oak, hickory, sweetgum, and maple, which thrive in the moist soils along the bayou. Cypress and tupelo trees are prominent in the swampy sections, providing critical habitat for aquatic and arboreal species. The upland areas feature loblolly pine and shortleaf pine stands, mixed with hardwoods, supporting a different set of wildlife and maintaining ecological diversity.

Wildlife Species

The Big Hill Bayou WMA supports numerous species of mammals, birds, reptiles, amphibians, and fish. Key wildlife includes white-tailed deer, wild turkey, feral hogs, raccoons, and various small mammals. The wetland areas are especially important for waterfowl such as mallards, wood ducks, and teal during migration seasons. The presence of endangered species like the red-cockaded woodpecker has also been documented, indicating the area's conservation value.

- White-tailed deer
- Wild turkey
- Waterfowl species (mallards, wood ducks)
- Red-cockaded woodpecker
- Various amphibians and reptiles

Recreational Activities

The Big Hill Bayou Wildlife Management Area is a popular destination for outdoor activities that include hunting, fishing, birdwatching, and hiking. The area's management supports sustainable use of natural resources, ensuring that recreation can coexist with habitat conservation.

Hunting Opportunities

Hunting is one of the primary recreational uses of Big Hill Bayou WMA. The area is well-known for deer and turkey hunting, with regulated seasons established by the Arkansas Game and Fish Commission. Waterfowl hunting during migration seasons also attracts hunters due to the abundance of ducks and geese utilizing the wetlands. Feral hog hunting is permitted year-round, contributing to invasive species control.

Fishing and Boating

The bayou and associated wetlands provide excellent fishing opportunities. Anglers can target species such as largemouth bass, catfish, and crappie. While the slow-moving waters of the bayou support small watercraft such as canoes and kayaks, motorized boating is limited to protect sensitive habitats.

Birdwatching and Wildlife Viewing

Birdwatchers and nature enthusiasts frequent Big Hill Bayou WMA to observe migratory and resident bird species. The diversity of habitats attracts songbirds, raptors, and waterfowl, especially during spring and fall migrations. Wildlife viewing trails and observation points are available for visitors to enjoy the area's natural beauty quietly and respectfully.

Hiking and Trails

Several informal trails wind through the WMA, allowing hikers to explore the bayou's forested and wetland environments. These trails offer opportunities to experience diverse plant communities and spot wildlife in their natural settings.

Conservation and Management Efforts

Effective management and conservation are essential to maintaining the ecological integrity of Big Hill Bayou Wildlife Management Area. The Arkansas Game and Fish Commission employs various strategies to balance public use with habitat preservation.

Habitat Restoration

Restoration projects focus on reestablishing native plant species, controlling invasive plants, and improving wetland hydrology. These efforts help sustain the diverse habitats that support wildlife populations. Controlled burns and selective timber harvesting are used to maintain healthy forest structures.

Wildlife Population Management

Population monitoring and regulation ensure that game species remain abundant while protecting non-game species and endangered wildlife. Hunting regulations, including bag limits and seasonal restrictions, help maintain balanced populations. Programs targeting invasive species, such as feral hog control, are also critical components of management.

Water Quality Protection

Maintaining water quality in the bayou and associated wetlands is a priority to support aquatic life and overall ecosystem health. Monitoring programs track water conditions, and efforts are made to reduce pollution and sedimentation from surrounding land uses.

Access and Visitor Information

Big Hill Bayou Wildlife Management Area is accessible to the public year-round, with specific regulations to ensure safety and conservation compliance. Visitors should be aware of guidelines to maximize their experience while protecting natural resources.

Location and Directions

The WMA is located near Lockesburg, Arkansas, with access points off state highways and local roads. Parking areas and signage guide visitors to key access points for hunting, fishing, and hiking.

Rules and Regulations

Visitors must adhere to state regulations regarding hunting seasons, fishing licenses, and permitted activities. The use of motorized vehicles is restricted to designated roads and parking areas to minimize habitat disturbance. Camping and fires are generally prohibited to protect the environment and reduce wildfire risk.

Visitor Amenities

While the area is primarily managed for wildlife conservation, some basic amenities such as parking areas, informational kiosks, and trails are available. Visitors are encouraged to bring necessary supplies and practice Leave No Trace principles to preserve the natural state of the WMA.

big hill bayou wildlife management area: Waterfowl in Winter Milton Webster Weller, 1988
Waterfowl in Winter was first published in 1988. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. The emphasis in research on waterfowl has traditionally focused on breeding as opposed to migrant or wintering birds. Scientists have long been interested in courtship, nest sites, laying, and brood-rearing, and they have also been concerned about losses of

eggs, young, nesting hens, and breeding habitats, especially as they have affected the goal of increasing populations. But lately there has been an upsurge of interest and research on the migratory and wintering phases, and this volume offers ample evidence of the knowledge gained. The authors—105 waterfowl biologists—have contributed 47 chapters that range geographically from Alaska to northern South America, and from the Pacific Northwest to Nova Scotia and Florida. Their subjects include: distributional changes due to human influence; population trends and concerns over less common species; pairing and other behavior that occurs in the wintering areas and is vital to the success of the species; feeding ecology and body condition during winter; new habitats created by such activities as aquaculture and park development; losses of habitat due to development and drainage for alternate uses; lead poisoning and pollutants that are detrimental to waterfowl; habitat management for maintenance of successful populations now and in the future. Also presented are reports of workshop discussions outlining current issues and future research needs. Preparation of this volume was assisted by an editorial board comprising Bruce J. J. Batt, Robert H. Chabreck, Leigh H. Fredrickson, and Dennis G. Raveling.
