bio questions to ask: Never Ask for the Sale Sue Heilbrunner, 2025-09-09 A tech leader and executive coach's actionable guide for anyone looking to supercharge their selling prowess and close the deal with authenticity and integrity. Sue Heilbrunner launched an executive coaching, facilitation, and speaking solo entrepreneurial venture which grew from zero to \$1 million in annual revenue in six years. Now, she offers her insight into salespersonship in an irreverent, direct, and actionable guide to success in sales. Never Ask For The Sale goes beyond simple tips, and influences the reader's overall understanding of selling. Sue Heilbrunner shares decades of experience, stories, tools, and exercises to coach people to be more successful at achieving their goals by aligning their work with their greatest strengths, and marketing that cohesive story with a winning sales strategy: passionate ambivalence. Heilbrunner introduces this concept as the strategic yet honest practice of presenting oneself as selective in the work they take on while enthusiastic about their area of expertise. At the heart of the book is the notion that any successful seller, in any context, is fantastic at selling themselves—whether that is within services in a solopreneur business, an early-stage startup, a college application, or a nonprofit mission. Never Ask For The Sale prompts deep self-awareness admixed with highly pragmatic calls to action at the intersection of coaching, personal growth, conscious leadership, and sales.

bio questions to ask: Bioarchaeological Analyses and Bodies Pamela K. Stone, 2018-01-16 This volume features bioarchaeological research that interrogates the human skeleton in concert with material culture, ethnographic data and archival research. This approach provides examples of how these intersections of inquiry can be used to consider the larger social and political contexts in which people lived and the manner in which they died. Bioarchaeologists are in a unique position to develop rich interpretations of the lived experiences of skeletonized individuals. Using their skills in multiple contexts, bioarchaeologists are also situated to consider the ethical nature and inherent humanity of the research collections that have been used because they represent deceased for whom there are records identifying them. These collections have been the basis for generating basic information regarding the human skeletal transcript. Ironically though, these collections themselves have not been studied with the same degree of understanding and interpretation that is applied to archaeological collections.

bio questions to ask: Reframing Aging Melissa K. Melby, 2025-09-10 How do we age? Why do we age? How and why does menopause happen? Do different cultures have different approaches and attitudes to, and experiences of, aging and menopause? Reframing Aging: Insights from Biology and Culture of Midlife Japanese uses a biocultural framework to try to answer these questions, and gain insights on aging and menopause in Japan, the United States, and beyond. Drawing on years of fieldwork and lab work in Japan, and over a decade of living and working in Japan at several universities and the National Institute of Health and Nutrition, with follow-up interviews spanning over 20 years, Melissa Melby challenges what are often considered "normal" experiences of aging and menopause. This book introduces a proximate-ultimate biocultural framework to guide the reader through questions of how (proximate) and why (ultimate) we age, and experience menopause, as we do. Drawing insights from evolutionary biology and societal-level phenomena, and the language of lived experience, it explores how cross-cultural variation in expectations, medicalization, collectivism, lifestyles, and other factors may influence how symptoms of aging and menopause are perceived, experienced, and treated. Reframing Aging: Insights from Biology and Culture of Midlife Japanese offers new approaches and insightful perspectives for students of biological/cultural/medical anthropology, gerontology, Asian studies, women and gender studies,

medicine, and public health.

bio questions to ask: Towards a Semiotic Biology Kalevi Kull, 2011 This book presents programmatic texts on biosemiotics, written collectively by world leading scholars in the field (Deacon, Emmeche, Favareau, Hoffmeyer, Kull, Markos, Pattee, Stjernfelt). In addition, the book includes chapters which focus closely on semiotic case studies (Bruni, Kotov, Maran, Neuman, Turovski). According to the central thesis of biosemiotics, sign processes characterise all living systems and the very nature of life, and their diverse phenomena can be best explained via the dynamics and typology of sign relations. The authors are therefore presenting a deeper view on biological evolution, intentionality of organisms, the role of communication in the living world and the nature of sign systems - all topics which are described in this volume. This has important consequences on the methodology and epistemology of biology and study of life phenomena in general, which the authors aim to help the reader better understand.

bio questions to ask: Biopolitics, Geopolitics, Life René Dietrich, Kerstin Knopf, 2023-03-10 The contributors to Biopolitics, Geopolitics, Life investigate biopolitics and geopolitics as two distinct yet entangled techniques of settler-colonial states across the globe, from the Americas and Hawai'i to Australia and Aotearoa/New Zealand. Drawing on literary and cultural studies, social sciences, political theory, visual culture, and film studies, they show how biopolitics and geopolitics produce norms of social life and land use that delegitimize and target Indigenous bodies, lives, lands, and political formations. Among other topics, the contributors explore the representations of sexual violence against Native women in literature, Indigenous critiques of the carceral state in North America, Indigenous elders' refusal of dominant formulations of aging, the governance of Indigenous peoples in Guyana, the displacement of Guaraní in Brazil, and the 2016 rule to formally acknowledge a government-to-government relationship between the US federal government and the Native Hawaiian community. Throughout, the contributors contend that Indigenous life and practices cannot be contained and defined by the racialization and dispossession of settler colonialism, thereby pointing to the transformative potential of an Indigenous-centered decolonization. Contributors René Dietrich, Jacqueline Fear-Segal, Mishuana Goeman, Alyosha Goldstein, Sandy Grande, Michael R. Griffiths, Shona N. Jackson, Kerstin Knopf, Sabine N. bio questions to ask: Critical Resistance David Couzens Hoy, 2005-08-12 This book serves as both an introduction to the concept of resistance in poststructuralist thought and an original contribution to the continuing philosophical discussion of this topic. How can a body of thought that mistrusts universal principles explain the possibility of critical resistance? Without appeals to abstract norms, how can emancipatory resistance be distinguished from domination? Can there be a poststructuralist ethics? David Hoy explores these crucial questions through lucid readings of Nietzsche, Foucault, Bourdieu, Derrida, and others. He traces the genealogy of resistance from Nietzsche's break with the Cartesian concept of consciousness to Foucault's and Bourdieu's theories of how subjects are formed through embodied social practices. He also considers Levinas, Heidegger, and Derrida on the sources of ethical resistance. Finally, in light of current social theory

from Judith Butler to Slavoj Žižek, he challenges poststructuralism as a category and suggests the term post-critique as a more accurate description of contemporary Continental philosophy. Hoy is a leading American scholar of poststructuralism. *Critical Resistance* is the only book in English that deals substantively with the topical concept of resistance in relation to poststructuralist thought, discussions of which have dominated Continental social thought for many years.

bio questions to ask: *Biolinguistics* Lyle Jenkins, 2000 This book investigates the nature of human language and its importance for the study of the mind. In particular, it examines current work on the biology of language. Lyle Jenkins reviews the evidence that language is best characterized by a generative grammar of the kind introduced by Noam Chomsky in the 1950s and developed in various directions since that time. He then discusses research into the development of language which tries to capture both the underlying universality of human language, as well as the diversity found in individual languages (Universal Grammar). Finally, he discusses a variety of approaches to language design and the evolution of language. An important theme is the integration of biolinguistics into the natural sciences - the 'unification problem'. Jenkins also answers criticisms of the biolinguistic approach from a number of other perspectives, including evolutionary psychology, cognitive science, connectionism and ape language research, among others.

bio questions to ask: *A Biosemiotic Ontology* Felice Cimatti, 2018-11-14 Giorgio Prodi (1928-1987) was an important Italian scientist who developed an original philosophy based on two basic assumptions: 1. life is mainly a semiotic phenomenon; 2. matter is somewhat a semiotic phenomenon. Prodi applies Peirce's cenopythagorean categories to all phenomena of life and matter: Firstness, Secondness, and Thirdness. They are interconnected meaning that the very ontology of the world, according to Prodi, is somewhat semiotic. In fact, when one describes matter as "made of" Firstness and Secondness, this means that matter 'intrinsically' implies semiotics (with Thirdness also being present in the world). At the very heart of Prodi's theory lies a metaphysical hypothesis which is an ambitious theoretical gesture that places Prodi in an awkward position with respect to the customary philosophical tradition. In fact, his own ontology is neither dualistic nor monistic. Such a conclusion is unusual and weird, but much less unusual in present time than it was when it was first introduced. The actual resurgence of various "realisms" make Prodi's semiotic realism much more interesting than when he first proposed his philosophical approach. What is uncommon, in Prodi perspective, is that he never separated semiotics from the materiality of the world. Prodi does not agree with the "standard" structuralist view of semiosis as an artificial and unnatural activity. On the contrary, Prodi believed semiosis (that is, the interconnection between Firstness, Secondness and Thirdness) lies at the very bottom of life. On one hand, Prodi maintains a strong realist stance; on the other, a realism that includes semiosis as 'natural' phenomena. This last view is very unusual because all forms, more or less, of realism exclude semiosis from nature but they frequently "reduce" semiosis to non-semiotic elements. According to Prodi, semiosis is a completely natural phenomenon.

bio questions to ask: *Research Methodologies for Auto/biography Studies* Kate Douglas, Ashley Barnwell, 2019-06-03 This collection of short essays provides a rigorous, rich, collaborative space in which scholars and practitioners debate the value of different methodological approaches to the study of life narratives and explore a diverse range of interdisciplinary methods. Auto/biography studies has been one of the most vibrant sub-disciplines to emerge in the humanities and social sciences in the past decade, providing significant links between disciplines including literary studies, languages, linguistics, digital humanities, medical humanities, creative writing, history, gender studies, education, sociology, and anthropology. The essays in this collection position auto/biography as a key discipline for modelling interdisciplinary approaches to methodology and ask: what original and important thinking can auto/biography studies bring to discussions of methodology for literary studies and beyond? And how does the diversity of methodological interventions in auto/biography studies build a strong and diverse research discipline? In including some of auto/biography's leading international scholars alongside emerging scholars, and exploring key subgenres and practices, this collection showcases knowledge about what we do when engaging in auto/biographical research.

Research Methodologies for Auto/biography Studies offers a series of case studies that explore the research practices, reflective behaviours, and ethical considerations that inform auto/biographical research.
