It is packed with guarantees so completely irrelevant to the problem it purports to “solve” (like “free college” and incomes for everyone “unable or unwilling to work”) that even its boosters have admitted it’s not really about the climate. The intrepid Marc Morano, author of the bestselling *Politically Incorrect Guide to Climate Change*, breaks down the science and the politics to expose the truth about the Green New Deal: • The science is settled: copious evidence—and prominent defections from the “climate consensus”—make clear we are not facing a man-made climate disaster • “Climate change” is the perfect Trojan horse for the socialist agenda of the Left • Fossil fuels lifted the West out of poverty—but our elites now want to deny them to the world’s poor • The Green New Deal is on a collision course with self-government and our fundamental rights Climate change has already been “solved” multiple times over the past two decades—with highly touted international agreements—and yet it never goes away as an excuse for leftist policies that will cripple our economy, impoverish the world, and take away our freedoms. Packed with telling statistics, damning quotations, and real science, *Green Fraud* is your source for all the facts you need to understand—and resist—the threat.

bill nye the science guy energy answer key: *Unstoppable* Bill Nye, 2015-11-10 “Climate change is coming. What can we do about it? TV’s ‘Science Guy’ has some answers. . . . An important message delivered in a winning manner.” —Kirkus Reviews Just as World War II called an earlier generation to greatness, so the climate crisis is calling today’s rising youth to action: to create a better future. In *Unstoppable*, Bill Nye expands the message for which he is best known and beloved. That message is that with a combination of optimism and scientific curiosity, obstacles become opportunities, and the possibilities of our world become limitless. With a scientist’s thirst for

knowledge and an engineer's vision of what can be, Bill Nye sees today's environmental issues not as insurmountable problems but as chances for our society to rise to the challenge and create a cleaner, healthier, smarter world. We need not accept that transportation consumes half our energy, and that two-thirds of the energy you put into your car is immediately thrown away out the tailpipe. We need not accept that dangerous emissions are the price we must pay for a vibrant economy and a comfortable life. Above all, we need not accept that we will leave our children a planet that is dirty, overheated, and depleted of resources.
