bill nye the science guy images: The Greatest Lie on Earth (Expanded Edition) Edward Hendrie, 2018-09-12 This book reveals the mother of all conspiracies. It sets forth biblical proof and irrefutable evidence that will cause the scales to fall from your eyes and reveal that the world you thought existed is a myth. The most universally accepted scientific belief today is that the earth is a globe, spinning on its axis at a speed of approximately 1,000 miles per hour at the equator, while at the same time it is orbiting the sun at approximately 66,600 miles per hour. All of this is happening as the sun, in turn, is supposed to be hurtling through the Milky Way galaxy at approximately 500,000 miles per hour. The Milky Way galaxy, itself, is alleged to be racing through space at a speed ranging from 300,000 to 1,340,000 miles per hour. What most people are not told is that the purported spinning, orbiting, and speeding through space has never been proven. In fact, every scientific experiment that has ever been performed to determine the motion of the earth has proven that the earth is stationary. Yet, textbooks ignore the scientific proof that contradicts the myth of a spinning and orbiting globe. Christian schools have been hoodwinked into teaching heliocentrism, despite the clear teaching in the bible that the earth is not a sphere and does not move. This book reveals the evil forces behind the heliocentric deception, and why scientists and the Christian churches have gone along with it.

bill nye the science guy images: Constructionism in Practice Yasmin B. Kafai, Mitchel Resnick, 2012-11-12 The digital revolution necessitates, but also makes possible, radical changes in how and what we learn. This book describes a set of innovative educational research projects at the MIT Media Laboratory, illustrating how new computational technologies can transform our

conceptions of learning, education, and knowledge. The book draws on real-world education experiments conducted in formal and informal contexts: from inner-city schools and university labs to neighborhoods and after-school clubhouses. The papers in this book are divided in four interrelated sections as follows: * Perspectives in Constructionism further develops the intellectual underpinnings of constructionist theory. This section looks closely at the role of perspective-taking in learning and discusses how both cognitive and affective processes play a central role in building connections between old and new knowledge. * Learning through Design analyzes the relationship between designing and learning, and discusses ways that design activities can provide personally meaningful contexts for learning. This section investigates how and why children can learn through the processes of constructing artifacts such as games, textile patterns, robots and interactive devices. * Learning in Communities focuses on the social aspects of constructionist learning, recognizing that how people learn is deeply influenced by the communities and cultures with which they interact. It examines the nature of learning in classroom, inner-city, and virtual communities. * Learning about Systems examines how students make sense of biological, technological, and mathematical systems. This section explores the conceptual and epistemological barriers to learning about feedback, self-organization, and probability, and it discusses new technological tools and activities that can help people develop new ways of thinking about these phenomena.

bill nye the science guy images: Technology, Science Teaching, and Literacy Kenneth P. King, 2005-12-27 This book deals with the use of technology in science teaching. The author is not, nor has ever had an intention of being a "techie." Rather, I spent the first decade of my professional life as a high school physics teacher, making occasional uses of technology to further student understanding and to automate my own teaching practices. During my graduate work, my interest in

the use of technology continued. Catalyzed, to some extent by the increasing availability of graphical interfaces for computers, the realization struck that the computer was more and more becoming a tool that all teachers could use to support their teaching practice—not simply those with a passion for the technology itself. The rapid changes in the hardware and software available, however, frequently caused me to reflect on the usefulness of technology—if it were to change at such a rapid pace, would anyone, save for those who diligently focused on the development of these tools, be able to effectively use technology in science teaching? Was change too rapid to yield a useful tool for teachers? To address this interest, I examined the nature of science teaching during this century—using the equally fluid notion of “scientific literacy”—which formed the organizing principle for this study. The result is an examination of how technology was used to accomplishing this goal of producing scientifically literate citizens. What was observed is that technology, indeed, consistently came to the service of teachers as they attempted to achieve this goal.

Semantically, the titles are nearly synonymous—prom queen, homecoming queen, winterfest princess—as all denote the longstanding tradition in the United States of conferring royal status upon teenage popularity. Yet whatever we call it, high school royalty remains one of the most paradoxical realities of youth culture, for as fervently as it gets dismissed and discredited, it is just as frequently revered and respected. A physical manifestation of the student body’s collective hegemonic efforts, the campus queen occupies a significant space in literature and culture, excavating truths both timeless and telling. A signature survey of the genre, this study traces the historical underpinnings and cultural implications of the campus queen, examining the longevity of the archetype and ultimately reimagining the narrative for future generations.

bill nye the science guy images: *The Craft of Scientific Films* Lauren Murphy, Michael Alley, 2023-08-31 This book, the first of its kind, helps scientists and engineers of all stages and disciplines share their work in a new way—with movies. Today, much of scientific communication is embedded in papers and presentations, but these documents don’t often extend outside of a specific academic field. By adding movies as a medium of communication, scientists and engineers can better communicate with their colleagues while also increasing their reach to students, professors, peers, potential collaborators, and the public. Scientific films help translate complex technical topics into more accessible and consumable messages. By following Lauren Murphy’s filmmaking formula – planning, shooting, and editing – readers will create their very own scientific films that look professional and polished. Using tools as simple as a smartphone, readers can develop short, personal stories with no cost or experience needed. This book will guide readers through all steps of the movie making process to a finished product. Readers will evolve their creative thinking skills and use their movies to improve classroom presentations, network across student organizations, present at conferences, recruit students for their labs, secure grant money, and more. Adding a movie to your body of work can be the tool that sparks interest in audiences to learn more—driving traffic to your publications, research projects, and websites. This book will help you develop new skills to become a better communicator while spreading your ideas and research to new audiences.

bill nye the science guy images: *Science in the Media* Paul R Brewer, Barbara L Ley, 2021-09-30 This timely and accessible text shows how portrayals of science in popular media—including television, movies, and social media—influence public attitudes around messages from the scientific community, affect the kinds of research that receive support, and inform perceptions of who can become a scientist. The book builds on theories of cultivation, priming, framing, and media models while drawing on years of content analyses, national surveys, and experiments. A wide variety of media genres—from Hollywood blockbusters and prime-time television shows to cable news channels and satirical comedy programs, science documentaries and children’s cartoons to Facebook posts and YouTube videos—are explored with rigorous social science research and an engaging, accessible style. Case studies on climate change, vaccines, genetically modified foods, evolution, space exploration, and forensic DNA testing are presented alongside reflections on media stereotypes and disparities in terms of gender, race, and other social identities. *Science in the Media* illuminates how scientists and media producers can bridge gaps between the scientific community and the public, foster engagement with science, and promote an inclusive vision of science, while also highlighting how readers themselves can become more active and critical consumers of media messages about science. *Science in the Media* serves as a supplemental text for courses in science communication and media studies, and will be of interest to anyone concerned with publicly engaged science.

bill nye the science guy images: *Flat Earth Clues* Mark Sargent, 2023-12-04 Is the Flat Earth theory that has been burning through the internet now ushering in the End of the World? Take a look at how we got here with Mark Sargent, star of the Netflix documentary *Behind the Curve* and creator of *Flat Earth Clues*. Go behind the scenes in tell-all chapters covering many of the major players in the Flat Earth community, both friend and foe. Break down some of the experiments being conducted by the activists, and find answers to the most common Flat Earth questions posed today. What role will NASA and the government have to play in the upcoming conflict? Where will religion stand when the dust settles? Will science be able to do anything to stem the tide of anti-scientism?

ABOUT THE AUTHOR Mark Sargent started out playing software games professionally. As a part time hobby he'd investigate and debunk conspiracy theories. The 'Flat Earth Theory' was the last on the list. Thinking this would be an easy case he was surprised to discover that the rabbit hole extended further than he ever could have imagined. In 2015, Mark put his thoughts together in a series of You Tube videos as 'Flat Earth Clues' which have been utilised by other You Tube creators and seen by millions in some format or other. This bought the opportunity to publish his first book *Flat Earth Clues: The Sky's the Limit* which delves into the possibility of our human civilization being inside a Truman Show like enclosed system and how it's been hidden from the public since 1956. Since then Mark has produced over 1,000 Flat Earth videos, been interviewed hundreds of times, and speaks to groups in different countries regarding this extraordinary claim. He hosts a weekly radio show on Truth Frequency Radio where you can hear more of his thoughts on this subject.
