cummins child development center: Watershed Eric R. Riddle, 2009 *Watershed: Service in the Wake of Disaster* was written with the help of many individuals who have the same goal of describing how Indiana was able to recover from devastating 2008 flooding and tornadoes. With three presidentially declared disasters, nearly every county in the state of Indiana was directly affected. A goal for the book is to help other communities prepare for and recover from disaster. Bartholomew County was not prepared for the flood. The majority of *Watershed* focuses on Columbus as a case study for coping with disaster without the benefit of a pre-established response and recovery plan. Columbus has learned and will be prepared for future disaster situations. The key learning from the flood recovery and improvements to our local community are also discussed. After failing to find available resources on the subject of local disaster recovery, I felt God call me to write *Watershed*. I was at a unique place in my life because my employer, Columbus Regional Hospital, was closed for four months due to the flood and allowed me to pursue my passion of flood recovery during that time. The research from the book includes extensive coverage from the Columbus newspaper *The Republic*, minutes that I took as Secretary of the Bartholomew County Long Term Flood Recovery Team, and over 40 recorded interviews. I interviewed flood-affected individuals, leaders of nonprofit agencies, and members of the Indiana Volunteer Organizations Active in Disaster (INVOAD). The book highlights 17 nonprofit leaders whose organizations played a key role in recovering from the 2008 disasters. From the proceeds of *Watershed*, I will donate 90% of the net profits to these organizations. The 17 essays in the book add variety and depth to a disaster recovery that requires more than one perspective to accurately convey the complexity of the experience.

cummins child development center: *Bilingual Competence and Bilingual Proficiency in Child Development* Norbert Francis, 2011-11-18 A study of first and second language development in an indigenous community with implications for broader linguistic and cognitive issues. When two or more languages are part of a child's world, we are presented with a rich opportunity to learn

something about language in general and about how the mind works. In this book, Norbert Francis examines the development of bilingual proficiency and the different kinds of competence that come together in making up its component parts. In particular, he explores problems of language ability when children use two languages for tasks related to schooling, especially in learning how to read and write. He considers both broader research issues and findings from an ongoing investigation of child bilingualism in an indigenous language-speaking community in Mexico. This special sociolinguistic context allows for a unique perspective on some of the central themes of bilingualism research today, including the distinction between competence and proficiency, modularity, and the Poverty of Stimulus problem. Francis proposes that competence (knowledge) should be considered as an integral component of proficiency (ability) rather than something separate and apart, arguing that this approach allows for a more inclusive assessment of research findings from diverse fields of study. The bilingual indigenous language project illustrates how the concepts of modularity and the competence-proficiency distinction in particular might be applied to problems of language learning and literacy. Few investigations of indigenous language and culture approach bilingual research problems from a cognitive science perspective. By suggesting connections to broader cognitive and linguistic issues, Francis points the way to further research along these lines.

cummins child development center: IEPs for ELs John J. Hoover, James R. Patton, 2017-03-22 Develop and monitor high-quality IEPs for diverse learners High-quality IEPs are fundamental for guiding the educational process of and developing goals for students who require special education services. English learners (ELs) and other students with learning, emotional, or behavioral disabilities present unique challenges to educators responsible for referring, assessing, and placing them. IEPs for ELs provides educators with numerous research-based strategies and examples of how to write effective IEPs for these K-12 learners. John J. Hoover and James Patton, leading professionals in the areas of special education and linguistic diversity, share their research and how they have supported ELs who have, or are suspected of having, learning and intellectual disabilities. Readers will find: Practical guidance for developing and monitoring culturally and linguistically responsive IEPs Checklists, guides, and other reproducibles that support IEP development Case studies and vignettes highlighting examples of appropriate IEPs for diverse learners Filled with expert practical advice that covers the IEP process and walks the reader through the procedure for creating high-quality IEPs that take individual differences into account, this guide is essential for special educators and bilingual/EL specialists. A major strength for this book is its unique tie to English learners, while providing a dual focus on IEP writing. This is a great tool to use when training new special education teachers and IEP facilitators. There are direct connections to writing legally defensible plans with a user-friendly focus on IEP writing. I see this book as a tool to support teachers and students in ensuring that language and cultural considerations are included when developing and updating individual plans. —Renee Bernhardt, Supervisor, Special Education Cherokee County School District, GA

McLaughlin, 2013-10-28 First published in 1987. Throughout human history, learning a second language has been an important part of the educational process. From ancient times to the present, school children have had to struggle to learn a second language (and in many cases third and fourth languages). To be educated meant to know a language other than the language of one's family and community. The contemporary American educational system is one of the few in recorded history that allows its products to remain monolingual.

cummins child development center: Promoting the Educational Success of Children and Youth Learning English National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Division of Behavioral and Social Sciences and Education, Board on Science Education, Board on Children, Youth, and Families, Committee on Fostering School Success for English Learners: Toward New Directions in Policy, Practice, and Research, 2017-09-25 Educating dual language learners (DLLs) and English learners (ELs) effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELs—who account for more than 9 percent of enrollment in grades K-12 in U.S. schools—are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. Promoting the Educational Success of Children and Youth Learning English: Promising Futures examines how evidence based on research relevant to the development of DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational outcomes. This report makes recommendations for policy, practice, and research and data collection focused on addressing the challenges in caring for and educating DLLs/ELs from birth to grade 12.

cummins child development center: Bilinguality and Bilingualism Josiane F. Hamers, Michel Blanc, 1989-02-16 The study of bilingualism - the subject of this important textbook - is no longer exclusively an academic preoccupation but is a practical necessity in today's multilingual world. Over the past decades, researchers from a wide range of disciplines - linguistics, psychology, neurology and sociology - have been fragmented and often inaccessible to students. Bilinguality and Bilingualism (a thoroughly revised and updated version of the authors' textbook published in French) provides a comprehensive, critical review of current research, focusing on the need for genuinely explanatory accounts and the development of satisfactory theoretical models. The book explores the way in which bilingualism develops in childhood or later, on its social, neurological and psychological foundations, and on the social and cultural consequences of bilingualism. It also explores the wider issues of languages in contact; both psycholinguistic research to language teaching, translation and interpreting, and also language planning and policy-making. The multidisciplinary material is deftly and logically organised to provide a refreshingly clear synthesis which will be invaluable to students and also to specialists who want an up-to-date account of research in different disciplines. It will also be an important reference work for language teachers and for professionals involved in language planning and multilingual education.

cummins child development center: The Bilingual Advantage Diane Rodríguez, Angela Carrasquillo, Kyung Soon Lee, 2014 This comprehensive account of bilingualism examines the importance of using students' native languages as a tool for supporting higher levels of learning. The authors highlight the social, linguistic, neuro-cognitive, and academic advantages of bilingualism, as well as the challenges faced by English language learners and their teachers in schools across the United States. They describe effective strategies for using native languages, even when the teacher lacks proficiency in a language. This resource addresses both the latest research and theory on native language instruction, along with its practical application (the what, why, and how) in K-8 classrooms. Key features include: Examples of programs that address the needs of learners from diverse language backgrounds, including Spanish, Chinese, Korean, Haitian Creole, Hindi, Bengali, and Russian. Teaching strategies, activities, and student tasks geared toward current academic standards. The role of primary language in ESL, dual language, special education, and general education programs.
