current physical therapy kuna: Asthma and Rhinitis William W. Busse, Stephen T. Holgate, 2008-04-30 The second edition of this highly acclaimed text has been extensively revised and greatly expanded to reflect the considerable advances made in our understanding of the mechanisms of asthma and rhinitis. Containing the contributions of 242 experts of international standing, presented in 133 chapters, Asthma and Rhinitis provides an up-to-date, authoritative reference for both the clinician and scientist. The global approach given in this book mirrors the universal approach to the understanding of allergic disease. The editors have carried out a thorough and radical revision of the content by adding 6 new sections and 44 new chapters. Most of this expansion is due to greatly increased coverage of the clinical aspects of asthma, with new sections on childhood asthma and on drug treatment (each drug class has its own chapter). Also, the expansion of research into the genetic basis of asthma has necessitated a whole new section on Genetics, comprising some six chapters. There are also new chapters on adult-onset asthma and the relationship of asthma to sinusitis. A new section on Asthma in Special Circumstances includes chapters on asthma in pregnancy, asthma and surgery, asthma in the elderly and asthma in the context of critical care. In bringing the Second Edition fully up to date, the book has inevitably increased in size, and is now presented in two volumes. The second edition of Asthma and Rhinitis will continue the tradition of its predecessor of providing an up-to-the-minute reference for all those involved in the management of, and research into, asthma and rhinitis.

current physical therapy kuna: Depression in Later Life Deborah Serani, 2016-06-09 The geriatric population, defined as men and women 65 years and older, is the fastest growing population in the world. While gerontology, the study of the aging process in human beings, has brought insights about the physical, emotional, and social needs of this population, little attention has been given to the mental health of the aging, and often treatable disorders are overlooked entirely. Depression is one of the leading mental disorders in any age group, but among the elderly it is often viewed as a normal part of aging. But it's not. Depression at any age requires attention and treatment. For sufferers and their families and caregivers, this go-to guide introduces readers to depression among the aging and elderly. It looks at both sufferers who've been diagnosed in their younger years as well as those with a new diagnosis, and reviews the symptoms, the diagnostic process, treatment options including alternative and holistic approaches, and long term care for those experiencing mild, moderate, or severe depression. With real stories throughout, the book illustrates the many forms depression can take, and Serani offers a compassionate voice alongside practical advice for sufferers, caregivers, and families. An extensive resource section rounds out the book. Anyone suffering from depression in later life, and anyone who cares for someone suffering, will want to read this important guide to living well with depression in the golden years.

current physical therapy kuna: Davidson's 100 Clinical Cases E-Book Mark W J Strachan, Surendra K. Sharma, John A. A. Hunter, 2012-03-04 Davidson's 100 Clinical Cases was awarded First Prize in Medicine in the 2009 British Medical Association Medical Book Awards. This book reflects the real world in which doctors practise medicine. The selection of clinical problems guides

the reader, step by step, through the correct path in the maze between the presenting complaint of a patient and the final diagnosis. The text emphasises the value of interpreting available clinical and investigative information in a logical way before considering a definitive diagnosis. The 100 cases are based on the 'presenting problems' of Davidson's Principles and Practice of Medicine. The book provides an international outlook reflecting the differences in the practice of medicine in the developing world and in low-resource settings, and addresses the epidemiological, economic and other reasons for many of these important differences. The cases are written by a team of senior doctors, from 12 countries, with considerable teaching experience. The book now includes 100 cases all closely linked to the 'presenting problems' sections of the latest 21st Edition of Davidson's Principles and Practice of Medicine. In this expanded new edition there are many new cases including aluminium phosphide poisoning; occupational lung disease; tremor; and drug interactions.
