Overview of CVS Pharmacy Technician Starting Pay

The CVS pharmacy technician starting pay varies depending on several aspects such as geographic location, store type, and experience level. Typically, new pharmacy technicians at CVS can expect an hourly wage that aligns with entry-level pharmacy technician salaries nationwide. The company aims to offer competitive compensation to attract qualified candidates and retain skilled employees.

On average, CVS pharmacy technician starting pay ranges from approximately \$13 to \$17 per hour. This range reflects the diversity of market conditions and cost of living differences across various regions. Some locations with higher living expenses may offer starting pay at the upper end of this spectrum, whereas smaller markets might fall toward the lower end.

It is important to note that CVS often provides training programs for new hires, which may include paid on-the-job training. This ensures that pharmacy technicians develop the necessary skills while earning an income. Starting pay during the training period might differ slightly but generally remains competitive within the retail pharmacy industry.

Typical Hourly Wage and Salary Estimates

The starting hourly wage for CVS pharmacy technicians typically falls between \$13 and \$17 per hour. When calculated on an annual basis, assuming full-time employment with 40 hours per week, this translates to an estimated salary between \$27,000 and \$35,000 per year. These figures can fluctuate due to overtime hours or part-time schedules.

Entry-level pharmacy technicians at CVS are often eligible for periodic wage reviews based on

performance and tenure, which can lead to incremental pay increases over time. This structure encourages continuous skill development and long-term commitment to the company.

Paid Training and Its Impact on Starting Pay

CVS Health invests in thorough training programs for newly hired pharmacy technicians. Typically, these training sessions are compensated, allowing new employees to earn starting pay even while acquiring essential knowledge and skills. This approach differs from unpaid internships or externships found in other industries.

Paid training benefits new technicians by providing financial stability during the onboarding phase, which often lasts several weeks. This also helps CVS maintain a high standard of service and compliance with pharmacy regulations.

Factors Affecting CVS Pharmacy Technician Starting Pay

Several variables influence the exact starting pay a pharmacy technician receives at CVS. Understanding these factors can help prospective employees anticipate their compensation and negotiate effectively if applicable.

Geographic Location

One of the primary factors affecting CVS pharmacy technician starting pay is the geographic location of the store. Urban areas and regions with a higher cost of living typically offer higher wages to offset living expenses. Conversely, rural or less populated areas may provide lower starting pay rates.

- High-cost metropolitan areas often exceed the national average starting pay.
- Rural locations may offer wages closer to the minimum starting rate.
- Regional economic conditions and local labor market demand impact pay scales.

Experience and Certification

While CVS employs many entry-level pharmacy technicians, those with prior experience or pharmacy technician certification may be eligible for higher starting pay. Certifications such as the Pharmacy Technician Certification Board (PTCB) credential demonstrate competence and can justify increased wages.

Experience in retail pharmacy or healthcare settings enhances a candidate's value, often resulting in starting pay above the baseline. CVS values certified and experienced technicians as they contribute to efficient pharmacy operations and improved customer service.

Store Type and Size

The specific CVS store location, including its size and customer volume, can influence starting pay. Larger stores or those with higher prescription volumes may offer better compensation due to increased responsibilities and workload. Specialty stores or those located within larger retail complexes may also provide differential pay rates.

cvcs pharmacy technician starting pay: A New U Ryan Craig, 2018-09-11 Every year, the cost of a four-year degree goes up, and the value goes down. But for many students, there's a better answer. So many things are getting faster and cheaper. Movies stream into your living room, without ticket or concession-stand costs. The world's libraries are at your fingertips instantly, and for free. So why is a college education the only thing that seems immune to change? Colleges and universities operate much as they did 40 years ago, with one major exception: tuition expenses have risen dramatically. What's more, earning a degree takes longer than ever before, with the average time to graduate now over five years. As a result, graduates often struggle with enormous debt burdens. Even worse, they often find that degrees did not prepare them to obtain and succeed at good jobs in growing sectors of the economy. While many learners today would thrive with an efficient and affordable postsecondary education, the slow and pricey road to a bachelor's degree is starkly the opposite. In *A New U: Faster + Cheaper Alternatives to College*, Ryan Craig documents the early days of a revolution that will transform—or make obsolete—many colleges and universities. Alternative routes to great first jobs that do not involve a bachelor's degree are sprouting up all over the place. Bootcamps, income-share programs, apprenticeships, and staffing models are attractive alternatives to great jobs in numerous growing sectors of the economy: coding, healthcare, sales, digital marketing, finance and accounting, insurance, and data analytics. *A New U* is the first roadmap to these groundbreaking programs, which will lead to more student choice, better matches with employers, higher return on investment of cost and time, and stronger economic growth.
