cvs employee handbook 2023: The Art of Compassionate Business Bruno R. Cignacco, 2023-12-01 There are several well-ingrained assumptions regarding the dynamics of work and business activities, which can be refuted. Some examples of these widespread assumptions in business and work environments are employees being viewed as commodities, competitors perceived as threats, companies' resources seen as limited, and customers perceived as scarce and difficult. All this leads to the question: Is there a way to perform business activities more humanely? The second edition of this book challenges the reader to change the way they perform in business situations and become more focused on the human aspects of business activities. The users of this knowledge and those affected by them will undergo a profound transformation in the way they perform business activities. They will benefit from gradually testing and implementing the guidelines conveyed in this book, both in the business environment and in the workplace. When readers put these principles into practice, positive ripple effects are bound to affect other stakeholders of the organisation they work for or own. The author has refreshed all the concepts and examples introduced in the first edition which include aspects related to mission and vision, passion, business mindset, organisational learning, improvement of business conversations, use of constructive criticism, and betterment of relationships with the most relevant stakeholders (customers, suppliers, intermediaries, community, employees, etc.). The author also includes a discussion of creativity and the innovation process as well as other relevant aspects related to a healthy business environment and provides various real-life examples of companies which have adopted a loving attitude towards their stakeholders – which has become so important in the current business environment.

cvs employee handbook 2023: Workplace Health Promotion, 2nd edition Danijela

Gasevic, Leah Okenwa-Emegwa, 2023-01-09 Work-related factors have implications for health and wellbeing. Due to the amount of time spent at the workplace and the impact of work on health over an individual's life course, the workplace has evolved as an important arena for population health promotion. Risk factors within the physical and psychosocial working environment, as well as inadequate organizational support, are associated with increasing work-related health problems, which result in psychosocial and economic implications for the individual, the family, the organization and the society. Recent estimates revealed an increasing level of sickness absence due to work related factors, among others. In recognition of the importance of worker health and a healthy working life, but also in line with numerous occupational health goals, many organisations set aside significant amounts of financial resources annually to promote work well-being. However, studies have shown that despite this positive disposition among employers, both employee participation and the impact of such programs remain minimal. According to the Ottawa declaration for health promotion and the Luxembourg declaration for Workplace Health Promotion (WHP), WHP should be strategic. It is recommended that WHP be conducted in a systematic and continuous process of needs analysis, priority setting, planning, implementation and evaluation. Unfortunately, available studies show that many companies have policies currently in place but lack knowledge regarding proper implementation and evaluation. The foregoing phenomenon raises questions regarding the level of knowledge of and attitudes towards WHP among people in management positions. This Research Topic aims to address factors affecting workplace health promotion. - What does WHP mean for employers? - What forms of WHP packages exist? - Is there evaluation and follow up of such interventions? - What are the barriers and facilitators relating to the uptake of WHP interventions among employees? - Do people in relevant managerial positions possess adequate knowledge regarding WHP? Manuscripts that explore factors crucial for WHP, including individual and organizational level factors, crucial for WHP are welcomed. Manuscripts on barriers, evidence-based interventions, best practices, analysis of existing policy documents and those with a life course perspective etc. are also welcomed. Manuscripts can be of national, international and global perspectives.
