Comparison with Other Salmon Varieties

While all salmon species offer nutritional benefits, Fremont wild caught pink salmon has distinctive qualities that differentiate it from other types such as sockeye, chinook, or Atlantic salmon. Understanding these differences can help consumers make informed choices based on nutritional needs and taste preferences.

fremont wild caught pink salmon nutrition: Improving the Sensorial and Nutritional Attributes of Canned Alaska Pink Salmon (*Oncorhynchus Gorbuscha*) with Salmon Oil Trina J. Lapis, 2010 Natural variation in the lipid content of wild-caught Pacific salmon causes inconsistency in the omega-3 fatty acid (FA) content per serving of canned product. An increase in product value may result from advertising the DHA and EPA contents per serving in the nutritional label. The objectives of this study were to add different levels of salmon oil (SO) to canned bright or dark pink salmon, to investigate the variability in the lipid content within and between groups, to

determine nutritionally important parameters, and to evaluate the sensorial properties of the products. Six groups of canned product were produced either using bright (0%, 1% and 2% SO) or dark (0%, 2% and 4% SO) pink salmon. Consumer sensory tests were conducted at the UAF campus. Proximate composition, FAME profiles, free FA content, lipid oxidation parameters, and essential amino acid and minerals were determined per serving (100 g). Compositional analysis revealed large variability in the lipid content within groups. The ranges of lipid content for the control groups (0%) were 4.39 to 8.13% and 2.96 to 4.91% for bright and dark pink salmon, respectively. Sensory evaluations indicated that 4% SO imparts negative sensorial attributes to dark pink salmon. However, 1% and 2% SO did not significantly affect the sensorial characteristics of bright and dark pink salmon, respectively. Adding 1% SO to bright pink salmon and 2% SO to dark pink salmon resulted to quantities of 1.24 and 1.45 g of omega-3 FA per serving, respectively--Leaf iii.
