freeway technology park irvine spectrum: Suburban Gridlock Robert Cervero, 2017-09-04 Robert Cervero documents the rise in suburban traffic around the country and examines the role of various planning, design, and management approaches in defining the automobile's growing presence in suburbia. The book highlights suburban business complexes and mixed-use centers throughout the United States that have been planned and designed to reduce auto dependency and to promote ridesharing, transit usage, and other commuting alternatives. Steps taken by various municipalities to enlist the support of private interests in reducing employee trip-making and financing area-wide roadway improvements are also examined. While the analysis is national in scope, detailed case studies offer in-depth insights into the many institutional and logistical problems involved in mitigating the impact of suburban congestion. The transportation planning profession has historically focused its attention and resources on downtown access and mobility problems. Suburbs, and places beyond, have long been considered havens for travel, free from traffic jams, and ideal for leisurely weekend excursions. Over the years, transportation planning in suburbia has involved little more than adding new projects to five-year capital improvement programs. This book remains essential for planners, administrators, and citizens interested in the future of suburbia and safeguarding it from the coming transportation crisis.

freeway technology park irvine spectrum: Coast of Dreams Kevin Starr, 2011-06-22 In this extraordinary book, Kevin Starr—widely acknowledged as the premier historian of California, the scope of whose scholarship the Atlantic Monthly has called “breathtaking”—probes the possible collapse of the California dream in the years 1990–2003. In a series of compelling chapters, Coast of Dreams moves through a variety of topics that show the California of the last decade, when the state was sometimes stumbling, sometimes humbled, but, more often, flourishing with its usual panache. From gang violence in Los Angeles to the spectacular rise—and equally spectacular fall—of Silicon Valley, from the Northridge earthquake to the recall of Governor Gray Davis, Starr ranges over myriad facts, anecdotes, news stories, personal impressions, and analyses to explore a time of unprecedented upheaval in California. Coast of Dreams describes an exceptional diversity of people, cultures, and values; an economy that mirrors the economic state of the nation; a battlefield where industry and the necessities of infrastructure collide with the inherent demands of a unique and stunning natural environment. It explores California politics (including Arnold Schwarzenegger’s election in the 2003 recall), the multifaceted business landscape, and controversial icons such as O. J. Simpson. “Historians of the future,” Starr writes, “will be able to see with more certainty whether or not the period 1990-2003 was not only the end of one California but the beginning of another”; in the meantime, he gives a picture of the place and time in a book at once sweeping and riveting in its details, deeply informed, engagingly personal, and altogether fascinating.

freeway technology park irvine spectrum: The Irvine Ranch: a Time for People Martin A.

Brower, 2013-06-03 *The Irvine Ranch: A Time for People* describes the excitement, the accomplishments and the conflicts during the first 50 years of development of the 90,000-acre Irvine Ranch in Orange County, California, into the largest master-planned new community in the United States. The book highlights The Irvine Company, the privately held corporation which developed the Ranch under three ownerships during the post World War II years, focusing on the firms seven presidents and current chairman. Here is the dramatic transformation of an agricultural dynasty into an urban empire told in eight engrossing chapters wrapped around the actions and personalities of Myford Irvine, Arthur McFadden, Charles Thomas, William Mason, Raymond Watson, Peter Kremer, Thomas Nielsen and Donald Bren. The book provides the reader with an intimate perspective of the workings of the sometimes mysterious and frequently misunderstood Irvine Company.

freeway technology park irvine spectrum: *The Futures of the City Region* Michael Neuman, Angela Hull, 2013-09-13 Does the 'city region' constitute a new departure in urbanisation? If so, what are the key elements of that departure? The realities of the urban in the 21st century are increasingly complex and polychromatic. The rise of global networks enabled by supranational administrations, both governmental and corporate, strongly influences and structures the management of urban life. How we conceive the city region has intellectual and practical consequences. First, in helping us grasp rapidly changing realities; and second in facilitating the flow of resources, ideas and learning to enhance the quality of life of citizens. Two themes interweave through this collection, within this broad palette. First are the socio-spatial constructs and their relationship to the empirical evidence of change in the physical and functional aspects of urban form. Second is what they mean for the spatial scales of governance. This latter theme explores territorially based understandings of intervention and the changing set of political concerns in selected case studies. In efforts to address these issues and improve upon knowledge, this collection brings together international scholars building new data-driven, cross-disciplinary theories to create new images of the city region that may prove to supplement if not supplant old ones. The book illustrates the dialectical interplay of theory and fact, time and space, and spatial and institutional which expands on our intellectual grasp of the theoretical debates on 'city-regions' through 'practical knowing', citing examples from Europe, the United States, Australasia, and beyond. This book was originally published as a Special Issue of *Regional Studies*.
