Key Components in the Frigidaire Affinity Washer

The Frigidaire Affinity washer consists of several key components, each playing a vital role in the machine's operation. The parts diagram breaks down these elements into manageable sections to provide a clear understanding of the washer's structure.

Wash Tub and Agitator Assembly

- Inner and outer wash tubs
- Agitator blades and shaft
- Seals and gaskets to prevent leaks

Drive Motor and Transmission

The drive motor powers the agitator and drum movement. It is connected to a transmission system that controls the speed and direction of the wash and spin cycles. The parts diagram highlights:

- Electric motor assembly
- Transmission gears and linkages
- Drive belts and pulleys

Drain Pump

The drain pump removes water from the washer after washing and rinsing. If clogged or damaged, it can cause drainage problems. The parts diagram identifies the pump's position and how it connects to the drain hose.

Seals and gaskets prevent water leakage around the door and tub. Over time, these rubber components can degrade, causing leaks. The diagram provides details on the seal placement and installation method.
