friedman spine physical therapy pc: Neuro-oncology Roger J. Packer, David Schiff, 2012-02-02 Cancer imposes daunting effects on the nervous system Brain cancer is one of the most devastating diagnoses a physician can deliver. Cancer of the nervous system can take many different forms. Treatment is specific to the type of malignancy, its location in the nervous system and, increasingly, its molecular characteristics. The challenges manifest further when management choices need to be made, and multidisciplinary approaches are required. Additional complexities arise in children, where the developing neurological system requires more sensitive treatment. Neuro-oncology unmasks the complexities to provide a straightforward guide to cancers of the nervous system. Following a general approach to diagnosis and treatment, the clinical aspects of specific cancer types in adults and children are explained in practical terms. A final section considers the effect of system cancer on the nervous system and the side effects of treatment. Clinical in approach, practical in execution, Neuro-oncology will help you diagnose and manage your patients more effectively. Neurology in Practice Series Editors Robert A Gross , MD, PhD, Department of Neurology, University of Rochester Medical Center, Rochester, New York, USA Jonathan W Mink, MD, PhD, Department of Neurology, University of Rochester Medical Center, Rochester, New York, USA The Neurology in Practice series provides clinical 'in the office' or 'at the bedside' guides to effective patient care for neurologists. The tone is practical, not academic, with authors offering guidance on what might be done and what should be avoided. The books are informed by evidence-based practice and feature: Algorithms and guidelines where they are appropriate 'Tips and Tricks' boxes - hints on improving outcomes 'Caution' warning boxes - hints on avoiding complications 'Science Revisited' - quick reminder of the basic science principles Summaries of key evidence and suggestions for further reading

friedman spine physical therapy pc: Manual Therapy of the Spine Mark Dutton, 2002 This book describes the anatomy and biomechanics of each area of the spine, pelvis and TMJ, and the theories behind the subjective and objective exams. Working from this foundation, detailed explanations on the assessment and treatment of each of the various areas are given, enabling the student and clinician to differentially diagnose, and integrate the results gleaned from the assessment, in order to formulate a working hypothesis. The sequential flow of the assessment is also detailed, with explanations as to its rationale, allowing a clinician of any proficiency level to use this book as a resource for an accurate biomechanical assessment, and the design of a specific treatment plan, based on those assessment findings. Recognizing the varying abilities between clinicians, most techniques are described with the patient sitting or lying in different positions.
