from gangster disciple to growth and development book: *Growth, Capital and New Technologies* Ronald Martin Albers, 2006 Durante los años noventa, Estados Unidos conoció un resurgir del crecimiento económico. Aunque este fenómeno se explica en parte por razones de ciclo, existen otras de orden estructural e influencia a largo plazo, en particular el papel del capital asociado a las Tecnologías de Información y Comunicación (ICT, según sus siglas en inglés), y la producción de activos en este sector. El contraste entre la tasa de crecimiento de Estados Unidos y el avance mucho más modesto de la Unión Europea se ha atribuido, en ocasiones, al retraso del Viejo Continente en el uso y la producción de activos relacionados con las nuevas tecnologías. Esta obra analiza el crecimiento, la medición del capital y las nuevas tecnologías. Para ello, reúne las ponencias presentadas y debatidas, a finales de noviembre de 2002, en un seminario internacional organizado por la Fundación BBVA y el Instituto Valenciano de Estudios Económicos (Ivie) en Valencia. Todas las ponencias se han sometido a un proceso de revisión y actualización antes de ser incluidas en el volumen. Esta colección de trabajos pretende facilitar el conocimiento y la comprensión de los factores que subyacen al crecimiento económico y a la mejora de la productividad de los años noventa y, en particular, al papel desempeñado por las ICT.

from gangster disciple to growth and development book: *Human Fetal Growth and Development* Nirranjan Bhattacharya, Phillip G. Stubblefield, 2016-05-17 This unique book delves into the mysteries of human fetal growth and maturation. Growing knowledge in genetics indicates that factors that impact on/influence fetal growth and maturation may have a role in determining a person's health and disease in later years. Placental, maternal, environmental, nutrient as well as fetal genome factors each play a role in producing a healthy, unhealthy or abnormal baby. A study of fetal growth and maturation is therefore basic to the understanding of why fetal growth problems occur, what implications these can have for adult disease, and how clinical intervention can help to reverse growth problems. The present study will be comprehensive and will be a major contribution to the fields of gynecology, genetics, obstetrics, biochemistry, molecular biology and clinical medicine. It will include cutting edge research in the field as well as explorations on clinical interventions in fetal growth, which will not only add to existing knowledge but also prompt future research. The two Editors are distinguished in their fields and both have extensive clinical and research experience. They felt that they could use their expertise to create a book that will help students, practitioners, researchers and others to understand the subject of gestation, growth and maturation and its implications from a multi-dimensional point of view, which will help them develop their own expertise in a cutting-edge and developing field. They have brought together medical scientists, clinical practitioners, embryologists, endocrinologists, immunologists, gynecologists, obstetricians, reproductive and molecular biologists, geneticists and many others to create a state-of-the-art book on a subject with increasing demand for further knowledge. from gangster disciple to growth and development book: Strategies in Neonatal Care to Promote Optimized Growth and Development: Focus on Low Birth Weight Infants Nicholas D. Embleton, Ferdinand Haschke, Lars Bode, 2022-05-10 Early and adequate nutritional support is critical to achieve appropriate rates of weight gain, which are almost twice that of a term infant. The 96th Nestlé Nutrition Institute Workshop was focused on the latest scientific knowledge in the area of neonatal care in preterm and low-birth-weight infants, including human milk oligosaccharides (HMOs) and their potential impact on the health of neonates. This 3-session workshop facilitated interactions between international experts. The first session, chaired by Prof. Nick Embleton, looked at optimizing feeding, nutrition, and growth in the neonatal intensive care unit and after discharge. Prof. Ferdinand Haschke chaired the second session, which looked at the personalized nutrition of preterm infants. The third session, chaired by Lars Bode, looked at the role of HMOs and the microbiome in the health of term and very-low-birth-weight infants. The key issues provided by this 3-day workshop offer valuable insights for healthcare providers, policy makers, and researchers on the crucial role of proper nutrition for adequate growth and consequent development of preterm infants.
