i love technology song: Love, Technology and Theology Scott A. Midson, 2020-06-25 This volume explores love in the context of today's technologies. It is difficult to separate love from romanticist ideals of authenticity, intimacy and depth of relationship. These ideals resonate with theological models of love that highlight the way God benevolently created the world and continues to love it. Technologies, which are designed in response to our desires, do not necessarily enjoy this romanticist resonance, and yet they are now remodelling the world. Are technologies then antithetical to love? In this volume, leading theologians have brought together themes of theology,

technology and love for the first time, exploring different areas where notions of love and technology are problematized. In a world where algorithms and artificial intelligences interact with us and shape our lives in ever more intricate and even intimate ways, we might feel attachments to and through machines that suggest sentiments of love while also changing how we think about love. Does love always have to be reciprocal? How can we enact love and care for others with technologies? Whose desires do technologies serve – consumers, corporations, creatures? This volume offers a systematic review of the challenges of living in a technologically saturated world, by means of critical application of, as well as reflection on, theological discussions about love.

i love technology song: Feminist in a Software Lab Tara McPherson, 2018-02-19 For over a dozen years, the Vectors Lab has experimented with digital scholarship through its online publication, Vectors, and through Scalar, a multimedia authoring platform. The history of this software lab intersects a much longer tale about computation in the humanities, as well as tensions about the role of theory in related projects. Tara McPherson considers debates around the role of cultural theory within the digital humanities and addresses Gary Hall's claim that the goals of critical theory and of quantitative or computational analysis may be irreconcilable (or at the very least require far more time and care). She then asks what it might mean to design from conception digital tools and applications that emerge from contextual concerns of cultural theory and, in particular, from a feminist concern for difference. This path leads back to the Vectors Lab and its ongoing efforts at the intersection of theory and praxis.

i love technology song: Singing the Body Electric: The Human Voice and Sound Technology Miriama Young, 2016-03-03 Singing the Body Electric explores the relationship between the human voice and technology, offering startling insights into the ways in which technological mediation affects our understanding of the voice, and more generally, the human body. From the phonograph to magnetic tape and now to digital sampling, Miriama Young visits particular musical and literary works that define a century-and-a-half of recorded sound. She discusses the way in which the human voice is captured, transformed or synthesised through technology. This includes the sampled voice, the mechanical voice, the technologically modified voice, the pliable voice of the digital era, and the phenomenon by which humans mimic the sounding traits of the machine. The book draws from key electro-vocal works spanning a range of genres - from Luciano Berio's *Thema: Omaggio a Joyce* to Radiohead, from Alvin Lucier's *I Am Sitting in a Room*, to Björk, and from Pierre Henry's *Variations on a Door and a Sigh* to Christian Marclay's *Maria Callas*. In essence, this book transcends time and musical style to reflect on the way in which the machine transforms our experience of the voice. The chapters are interpolated by conversations with five composers who work creatively with the voice and technology: Trevor Wishart, Katharine Norman, Paul Lansky, Eduardo Miranda and Bora Yoon. This book is an interdisciplinary enterprise that combines music aesthetics and musical analysis with literature and philosophy.

i love technology song: *Media, Technology, and Literature in the Nineteenth Century* Margaret Linley, 2016-04-29 Operating at the intersection where new technology meets literature, this collection discovers the relationship among image, sound, and touch in the long nineteenth century. The chapters speak to the special mixed-media properties of literature, while exploring the important interconnections of science, technology, and art at the historical moment when media was being theorized, debated, and scrutinized. Each chapter focuses on a specific visual, acoustic, or haptic dimension of media, while also calling attention to the relationships among the three. Famous works such as Wordsworth's *I wandered lonely as a cloud* and Shelley's *Frankenstein* are discussed alongside a range of lesser-known literary, scientific, and pornographic writings. Topics include the development of a print culture for the visually impaired; the relationship between photography and narrative; the kaleidoscope and modern urban experience; Christmas gift books; poetry, painting and music as remediated forms; the interface among the piano, telegraph, and typewriter; Ernst Heinrich Weber's model of rationalized tactility; and how the shift from visual to auditory

telegraphic instruments amplified anxieties about the place of women in nineteenth-century information networks. Full of surprising insights and connections, the collection offers new impetus for stimulating historical conversations and debates about nineteenth-century media, while also contributing fresh perspectives on new media and (re)mediation today.

i love technology song: *Man and Nature in God* Lloyd E. Sandelands, 2017-12-02

Contemporary American life is tinged with dissatisfaction. Increased wealth and comfort and technological advances have not made individuals happier or society more companionable. Today Americans marry later or not at all, and they fail at marriage as often as they succeed. *Man and Nature in God* is a story of contemporary American decadence, a grim tale of our flagging relation to nature, a tale confirmed at the center of our sexual lives. Sandelands grounds his critique in a modern philosophical error. We have conflated a particular metaphysical outlook--the subjective standpoint of science--with our relationship, as humans, to nature. We fail to see that however much we may learn about nature by treating it as object to our subject, we cannot in this way learn what we most want and most need to know about nature and about ourselves. Answers to such questions as How are we related to nature? and How are we to think and act truly in nature continue to elude us. Cast as ideology by the isms of humanism, naturalism, and postmodernism, today's subjective standpoint has turned the question of truth into one question of politics. The unhappy result has been and continues to be a profound and deadly misunderstanding of nature as well as man, epitomized in contemporary American culture today. Taking this as his starting point, Sandelands suggests how we can save ourselves from our mortifying philosophical error, thereby claiming our true relation to nature, and reinvigorating our sexual lives. He identifies the need for a natural philosophy that takes God to be the starting point of self-understanding. Although the book is about philosophy, it is not only for the academic philosopher. Although it is about theology, it is not only for the theologian or student of religion. And although the book takes modern biological and social sciences to task, it is not only for biological and social scientists. Instead, *Man and Nature in God* is for everyone concerned about the disma
