i effing love science: The First and Last Science G.V. Loewen, 2021-12-13 "The back-stage people must be so used to not only seeing beauty but also constructing it that they never seemed to even glance at Kristen and the other models. But with Michelle it was different. With her, one didn't

see beauty, but rather felt oneself in the presence of the Beautiful itself. The truth of beauty. For a long while, in human consciousness, beauty, truth and the good were so associated with one another as to be the same thing. Hah. Well, we now know that beauty can be deceptive, the good situational, and the truth as ugly as hell.” And the truth is about to get a lot uglier than even the veteran heroes could have imagined. With the now sisterless Seraphim returned and out for the blood of the world, with the inhuman future of sentient machine-souls archiving the vast billions of surplus spirits washed up on their post-historical shores, and with the major nations of the world gutted and paranoid, the beloved comrades embark on a climactic series of adventures that will take the very presence of the future to resolve the future of the present. Completing a major narrative arc for Kristen-Seraphim, book seven careens forward into the very crucible of human vanity and desire: immortality. That the enduring cast and crew that readers have come to know take into their ambit the world leaders themselves, is not even the most stunning event. The heroes had never known exactly what their lives really meant, thus providing the truer mystery that must be solved, lest all, including themselves, be lost.

i effing love science: Entertainment Science Thorsten Hennig-Thurau, Mark B. Houston, 2018-08-01 The entertainment industry has long been dominated by legendary screenwriter William Goldman's "Nobody-Knows-Anything" mantra, which argues that success is the result of managerial

intuition and instinct. This book builds the case that combining such intuition with data analytics and rigorous scholarly knowledge provides a source of sustainable competitive advantage – the same recipe for success that is behind the rise of firms such as Netflix and Spotify, but has also fueled Disney’s recent success. Unlocking a large repertoire of scientific studies by business scholars and entertainment economists, the authors identify essential factors, mechanisms, and methods that help a new entertainment product succeed. The book thus offers a timely alternative to “Nobody-Knows” decision-making in the digital era: while coupling a good idea with smart data analytics and entertainment theory cannot guarantee a hit, it systematically and substantially increases the probability of success in the entertainment industry. Entertainment Science is poised to inspire fresh new thinking among managers, students of entertainment, and scholars alike. Thorsten Hennig-Thurau and Mark B. Houston – two of our finest scholars in the area of entertainment marketing – have produced a definitive research-based compendium that cuts across various branches of the arts to explain the phenomena that provide consumption experiences to capture the hearts and minds of audiences. Morris B. Holbrook, W. T. Dillard Professor Emeritus of Marketing, Columbia University Entertainment Science is a must-read for everyone working in the entertainment industry today, where the impact of digital and the use of big data can’t be ignored anymore. Hennig-Thurau and Houston are the scientific frontrunners of knowledge that the industry urgently needs. Michael Kölmel, media entrepreneur and Honorary Professor of Media Economics at University of Leipzig Entertainment Science’s winning combination of creativity, theory, and data analytics offers managers in the creative industries and beyond a novel, compelling, and comprehensive approach to support their decision-making. This ground-breaking book marks the dawn of a new Golden Age of fruitful conversation between entertainment scholars, managers, and artists. i effing love science: Future Science Fiction Digest Issue 12 Jane Espenson, Alexandra Seidel, Oleg Divov, Arthur Liu, Nora Schinnerl, Stories from Austria, China, Germany, USA, and Russia. Old People's Folly features a cantankerous, disabled old lady protagonist living a difficult life many generations after the collapse of modern society. When she meets a young and idealistic woman from before the collapse, whose personality has been digitally stored, there's both a culture clash and a generational divide. Can the two find something in common in order to help a teenager in need? The Life Cycle of a Cyber-Bar is a madcap, unorthodox narrative that may have minor notes of Douglas Adams but is really unlike anything you've read. To say too much would be to spoil the story. Alexa Seidel returns to the pages of Future SF with a dark novelette about a xenoarchaeologist who finds more in an alien dig than she bargained for. I mean, does anyone ever

find nice things in a creepy alien structure? Whether or not you know Jane Espenson by name, you've probably enjoyed her work. She's written for Buffy the Vampire Slayer, Game of Thrones, Gilmore Girls, Battlestar Galactica, and, most recently, Foundation. Her epistolary story is about a despicable human being who ends up doing something very good, despite himself. Finally, there's a story by another returning author, Oleg Divov. His satirical and very Russian look at the process of elections is guaranteed to feel relevant to modern readers everywhere.
