**images of bill nye the science guy: Overcoming Barriers for Women of Color in STEM Fields: Emerging Research and Opportunities** Leggett-Robinson, Pamela M., Villa, Brandi Campbell, 2020-06-26 Despite a plethora of initiatives, policies, and procedures to increase their representation in STEM, women of color still remain largely underrepresented. In the face of institutional and societal bias, it is important to understand the various methods women of color use to navigate the STEM landscape as well as the role of their personal and professional identities in overcoming the systemic (intentional or unintentional) barriers placed before them. *Overcoming Barriers for Women of Color in STEM Fields: Emerging Research and Opportunities* is a collection of innovative research depicting the challenges of women of color professionals in STEM and identifying strategies used to overcome these barriers. The book examines the narrative of these difficulties through a reflective lens that also showcases how both the professional and personal lives of these women were changed in the process. Additionally, the text connects the process to the Butterfly Effect, a metamorphosis that brings about a dramatic change in character and perspective to those who go through it, which in the case of women of color is about rebirth, evolution, and renewal. While highlighting topics including critical race theory, institutional racism, and educational inequality, this book is ideally designed for administrators, researchers, students, and professionals working in the STEM fields.

**images of bill nye the science guy: Technology, Science Teaching, and Literacy** Kenneth P. King, 2005-12-27 This book deals with the use of technology in science teaching. The author is not, nor has ever had an intention of being a "techie." Rather, I spent the first decade of my professional life as a high school physics teacher, making occasional uses of technology to further student understanding and to automate my own teaching practices. During my graduate work, my interest in the use of technology continued. Catalyzed, to some extent by the increasing availability of graphical interfaces for computers, the realization struck that the computer was more and more becoming a tool that all teachers could use to support their teaching practice—not simply those with a passion for the technology itself. The rapid changes in the hardware and software available, however, frequently caused me to reflect on the usefulness of technology—if it were to change at such a rapid pace, would anyone, save for those who diligently focused on the development of these tools, be able to effectively use technology in science teaching? Was change too rapid to yield a useful tool for teachers? To address this interest, I examined the nature of science teaching during this century—using the equally fluid notion of "scientific literacy"—which formed the organizing principle for this study. The result is an examination of how technology was used to accomplishing this goal of producing scientifically literate citizens. What was observed is that technology, indeed, consistently came to the service of teachers as they attempted to achieve this goal.

**images of bill nye the science guy: The Planets** Nirmala Nataraj, 2017-11-07 "Might be just the book to bring out your inner astronomer . . . over 250 pages of breathtaking images from the past 50 years of NASA's space exploration." —Parade Preface by Bill Nye This magnificent volume offers a rich visual tour of the planets in our solar system. More than two-hundred breathtaking photographs from the archives of NASA are paired with extended captions detailing the science behind some of our cosmic neighborhood's most extraordinary phenomena. Images of newly discovered areas of Jupiter, fiery volcanoes on Venus, and many more reveal the astronomical marvels of space in engrossing detail. Anyone with an interest in science, astronomy, and the mysteries of the universe will delight in this awe-inspiring guide to the wonders of the solar system.

"As you turn through the pages, you're hit with true moments of awe, photos that remind you the power of nature extends beyond our own planet." —Houston Chronicle "Breathtaking pictures show the otherworldly magic of the solar system . . . The images are at once humbling and uplifting: Here in the black void of space is Saturn's frozen moon, Mimas, white and pitted like a galactic golf ball; here is the tiny golden orb called Io, casting a shadow in a perfect inky circle on the marbled surface of Jupiter; here is the great sun, flames spurting from its surface like plumes." —The Wall Street Journal "[A] gorgeous photographic tour of space . . . The collection is a remarkable reminder of how much has been learned about the planets over the past few decades, solving many mysteries yet introducing many more." —Publishers Weekly

**images of bill nye the science guy:** *The Greatest Lie on Earth (Expanded Edition)* Edward Hendrie, 2018-09-12 This book reveals the mother of all conspiracies. It sets forth biblical proof and irrefutable evidence that will cause the scales to fall from your eyes and reveal that the world you thought existed is a myth. The most universally accepted scientific belief today is that the earth is a globe, spinning on its axis at a speed of approximately 1,000 miles per hour at the equator, while at the same time it is orbiting the sun at approximately 66,600 miles per hour. All of this is happening as the sun, in turn, is supposed to be hurtling through the Milky Way galaxy at approximately 500,000 miles per hour. The Milky Way galaxy, itself, is alleged to be racing through space at a speed ranging from 300,000 to 1,340,000 miles per hour. What most people are not told is that the purported spinning, orbiting, and speeding through space has never been proven. In fact, every scientific experiment that has ever been performed to determine the motion of the earth has proven that the earth is stationary. Yet, textbooks ignore the scientific proof that contradicts the myth of a spinning and orbiting globe. Christian schools have been hoodwinked into teaching heliocentrism, despite the clear teaching in the bible that the earth is not a sphere and does not move. This book reveals the evil forces behind the heliocentric deception, and why scientists and the Christian churches have gone along with it.

Semantically, the titles are nearly synonymous—prom queen, homecoming queen, winterfest princess—as all denote the longstanding tradition in the United States of conferring royal status upon teenage popularity. Yet whatever we call it, high school royalty remains one of the most paradoxical realities of youth culture, for as fervently as it gets dismissed and discredited, it is just as frequently revered and respected. A physical manifestation of the student body's collective hegemonic efforts, the campus queen occupies a significant space in literature and culture, excavating truths both timeless and telling. A signature survey of the genre, this study traces the historical underpinnings and cultural implications of the campus queen, examining the longevity of the archetype and ultimately reimagining the narrative for future generations.

Kafai, Mitchel Resnick, 2012-11-12 The digital revolution necessitates, but also makes possible, radical changes in how and what we learn. This book describes a set of innovative educational research projects at the MIT Media Laboratory, illustrating how new computational technologies can transform our conceptions of learning, education, and knowledge. The book draws on real-world education experiments conducted in formal and informal contexts: from inner-city schools and university labs to neighborhoods and after-school clubhouses. The papers in this book are divided in four interrelated sections as follows: \* *Perspectives in Constructionism* further develops the intellectual underpinnings of constructionist theory. This section looks closely at the role of perspective-taking in learning and discusses how both cognitive and affective processes play a central role in building connections between old and new knowledge. \* *Learning through Design* analyzes the relationship between designing and learning, and discusses ways that design activities can provide personally meaningful contexts for learning. This section investigates how and why children can learn through the processes of constructing artifacts such as games, textile patterns, robots and interactive

devices. \* Learning in Communities focuses on the social aspects of constructionist learning, recognizing that how people learn is deeply influenced by the communities and cultures with which they interact. It examines the nature of learning in classroom, inner-city, and virtual communities. \* Learning about Systems examines how students make sense of biological, technological, and mathematical systems. This section explores the conceptual and epistemological barriers to learning about feedback, self-organization, and probability, and it discusses new technological tools and activities that can help people develop new ways of thinking about these phenomena.
