illinois science and technology park

illinois science and technology park stands as a premier hub for innovation and technological advancement in the Midwest. This dynamic research and development environment fosters collaboration among startups, established corporations, academic institutions, and government agencies. The park is strategically designed to accelerate scientific discovery, support cutting-edge technology development, and drive economic growth in Illinois and beyond. Featuring state-of-the-art facilities and a vibrant ecosystem, the Illinois Science and Technology Park attracts a diverse range of industries including biotechnology, information technology, clean energy, and advanced manufacturing. This article explores the park’s history, infrastructure, key sectors, economic impact, and future prospects. Understanding the unique attributes of the Illinois Science and Technology Park provides insight into its role as a catalyst for innovation and regional competitiveness.

Overview and History of Illinois Science and Technology Park

The Illinois Science and Technology Park (ISTP) was established to create a dedicated space for innovation and technology-driven enterprises. Located in the Chicago metropolitan area, the park was developed to support research initiatives and commercialization efforts, bridging the gap between academic research and market-ready technologies. Since its inception, ISTP has evolved into a vibrant ecosystem that nurtures startups and attracts major corporations seeking to leverage cutting-edge research. The park’s strategic vision emphasizes fostering collaboration, promoting entrepreneurship, and facilitating access to resources that accelerate innovation.

Founding and Evolution

The origins of the Illinois Science and Technology Park date back to the early 2000s when state and local leaders identified the need for a dedicated innovation hub. The park was

envisioned as a catalyst for economic development by attracting technology companies and research institutions. Over time, ISTP has expanded its footprint and enhanced its offerings to accommodate a growing number of tenants and research programs. The park’s growth reflects Illinois’s commitment to maintaining a competitive edge in science and technology sectors.

Mission and Vision

ISTP’s mission focuses on fostering innovation, supporting entrepreneurship, and driving technology commercialization. The vision centers on creating a collaborative environment where researchers, entrepreneurs, and industry leaders work together to solve complex challenges. This mission has guided the park’s development and continues to shape its strategic priorities, ensuring that it remains a leading destination for innovation.

Infrastructure and Facilities

The Illinois Science and Technology Park offers advanced infrastructure designed to meet the needs of diverse technology companies and research entities. The facilities provide flexible laboratory spaces, office environments, and shared resources that promote collaboration and efficiency. Cutting-edge amenities and support services enhance the park’s attractiveness to tenants from various sectors including biotech, IT, and clean energy.

Laboratory and Office Spaces

ISTP features customizable laboratory spaces equipped with modern scientific instruments and safety systems to accommodate a wide range of research activities. These labs support biotechnology research, chemical analysis, and engineering projects. Additionally, the office spaces are designed to foster communication and collaboration among tenants while providing access to necessary business amenities.

Shared Resources and Support Services

The park provides shared facilities such as conference rooms, meeting areas, and communal lounges to encourage interaction and networking. Support services including business development assistance, grant writing support, and access to venture capital networks are integral to the park’s infrastructure. These resources help startups and established companies alike to scale their innovations effectively.

Key Industries and Research Focus

The Illinois Science and Technology Park hosts a diverse array of industries that contribute to its dynamic innovation ecosystem. The park’s strategic focus includes biotechnology, information technology, clean energy, advanced manufacturing, and

healthcare technologies. By concentrating on these sectors, ISTP supports high-impact research and commercialization efforts that address critical societal needs.

Biotechnology and Life Sciences

Biotechnology is a cornerstone of ISTP's research activities, with many tenants engaged in drug development, medical devices, diagnostics, and genomics. The park's advanced laboratory facilities and proximity to leading academic institutions make it an ideal location for life sciences innovation. Collaborative projects often focus on improving healthcare outcomes and developing novel therapies.

Information Technology and Software Development

ISTP supports companies specializing in software engineering, data analytics, and cybersecurity. These firms leverage the park's collaborative environment to develop innovative IT solutions that enhance business processes and protect digital assets. The presence of IT startups alongside established technology firms fosters knowledge exchange and accelerates product development.

Clean Energy and Sustainability

Environmental sustainability and clean energy technologies are key research areas within the park. Tenants work on renewable energy solutions, energy efficiency improvements, and sustainable materials development. ISTP's commitment to green innovation aligns with broader global efforts to address climate change and promote sustainable economic growth.

Economic and Community Impact

The Illinois Science and Technology Park plays a significant role in driving economic development and job creation in the region. By attracting innovative companies and facilitating technology commercialization, ISTP contributes to the growth of high-skilled employment opportunities. The park also supports local communities by promoting STEM education and workforce development initiatives.

Job Creation and Economic Growth

ISTP has generated thousands of jobs across technology sectors, ranging from research scientists to business professionals. The park's tenants contribute to the state's economy through investment, tax revenues, and increased demand for ancillary services. The economic multiplier effect extends beyond the park, benefiting surrounding communities and regional industries.

Educational and Workforce Development Initiatives

The park actively collaborates with universities, community colleges, and workforce organizations to create training programs that prepare individuals for careers in science and technology. Internship opportunities, mentorship programs, and STEM outreach events are part of ISTP’s commitment to building a skilled talent pipeline that supports its tenant companies.

Collaborations and Partnerships

Collaboration is at the heart of the Illinois Science and Technology Park’s success. The park fosters partnerships among academic institutions, government agencies, private sector companies, and nonprofit organizations. These collaborations enhance research capabilities, facilitate funding access, and accelerate the translation of ideas into market-ready products.

Academic and Research Institution Partnerships

ISTP maintains strong ties with universities and research centers, enabling tenants to leverage academic expertise and infrastructure. Joint research projects, technology transfer agreements, and shared facilities contribute to a robust innovation pipeline. These partnerships support the advancement of scientific knowledge and practical applications.

Industry and Government Collaboration

Government agencies provide funding, regulatory guidance, and policy support that enable ISTP to thrive as an innovation hub. Industry partnerships facilitate commercialization opportunities, pilot projects, and market access. This multi-sector collaboration creates a synergistic environment conducive to sustained technological progress.

Future Developments and Opportunities

The Illinois Science and Technology Park continues to evolve with plans for expansion and enhanced service offerings. Future developments focus on increasing capacity, integrating emerging technologies, and strengthening the innovation ecosystem. These initiatives aim to maintain ISTP’s position as a leading destination for science and technology enterprises.

Expansion Plans

Planned expansions include additional laboratory and office space, improved infrastructure, and upgraded facilities to accommodate growing demand. The park aims to

attract more diverse tenants and support cross-disciplinary collaboration. Expansion efforts are aligned with regional economic development strategies and technological trends.

Emerging Technology Integration

ISTP is actively exploring opportunities to incorporate emerging technologies such as artificial intelligence, advanced materials, and digital health innovations. By fostering an environment that embraces technological advances, the park seeks to accelerate the development of transformative solutions with global impact.

Opportunities for Entrepreneurs and Investors

The park offers numerous opportunities for startups, entrepreneurs, and investors to engage with a vibrant innovation community. Access to capital, mentorship, and business support services empowers innovators to grow and scale their ventures. ISTP’s ecosystem is designed to nurture the next generation of technology leaders and disruptive enterprises.

- State-of-the-art laboratory and office infrastructure
- Collaborative research environment with academic partnerships
- Focus on biotechnology, IT, clean energy, and advanced manufacturing
- Strong economic impact and job creation in Illinois
- Continuous growth with expansion and technology integration plans

Frequently Asked Questions

What is the Illinois Science and Technology Park?

The Illinois Science and Technology Park is a leading innovation hub located in Chicago, dedicated to fostering research, development, and commercialization of new technologies by providing office, laboratory, and collaborative spaces for startups and established companies.

Where is the Illinois Science and Technology Park located?

It is located on the campus of the University of Illinois at Chicago, adjacent to the medical center and near downtown Chicago, providing strategic access to academic and research

institutions.

What types of companies and research are hosted at the Illinois Science and Technology Park?

The park hosts companies focused on biotechnology, pharmaceuticals, healthcare, information technology, and other advanced technology sectors, supporting innovative research and product development.

How does the Illinois Science and Technology Park support startups and entrepreneurs?

The park offers flexible office and laboratory spaces, access to cutting-edge facilities, networking opportunities, business development resources, and connections to investors and university research to help startups grow and succeed.

What recent developments or expansions have occurred at the Illinois Science and Technology Park?

Recent expansions include new lab and office buildings designed to accommodate growing demand from life science and tech companies, as well as enhanced collaborative spaces and infrastructure to support innovation and partnerships.

Additional Resources

1. *Innovation Hubs: The Rise of Illinois Science and Technology Park*
This book explores the development and growth of the Illinois Science and Technology Park as a premier innovation hub. It covers the park's history, key milestones, and its impact on technology startups and research institutions. Readers will gain insight into how collaboration between academia, industry, and government fueled regional economic growth.

2. *Biotech Breakthroughs at Illinois Science and Technology Park*
Focusing on the biotechnology sector, this book highlights groundbreaking research and companies that originated from the Illinois Science and Technology Park. It delves into the park's role in advancing medical technology, drug development, and life sciences. The narrative includes interviews with leading scientists and entrepreneurs driving innovation.

3. *Smart Cities and Sustainable Tech: Innovations from Illinois Science and Technology Park*
This title examines the contributions of the Illinois Science and Technology Park to smart city technologies and sustainable development. It discusses projects related to clean energy, urban planning, and IoT applications developed within the park. The book provides a forward-looking view of how technology can shape future urban environments.

4. *Entrepreneurship and Startups at Illinois Science and Technology Park*
An in-depth look at the startup ecosystem nurtured by the Illinois Science and Technology

Park, this book covers strategies for launching and scaling tech companies. It features case studies of successful startups, funding approaches, and mentorship programs available at the park. Readers interested in entrepreneurship will find practical advice and inspiration.

5. *The Role of Universities in Illinois Science and Technology Park Innovation*
This book highlights the collaboration between universities and the Illinois Science and Technology Park. It explores how academic research translates into commercial technology and the importance of educational partnerships. The book also profiles joint research centers and student-led innovation initiatives within the park.

6. *Technology Transfer and Commercialization at Illinois Science and Technology Park*
Focusing on the processes that turn scientific discoveries into marketable products, this book details the technology transfer mechanisms at the Illinois Science and Technology Park. It explains intellectual property management, licensing, and industry collaborations. The book is essential reading for those interested in bridging science and business.

7. *Advanced Manufacturing Innovations in Illinois Science and Technology Park*
This title covers the cutting-edge manufacturing technologies developed and tested at the Illinois Science and Technology Park. Topics include robotics, automation, and materials science advancements. It highlights how these innovations contribute to making manufacturing more efficient and competitive.

8. *Data Science and Analytics at Illinois Science and Technology Park*
Exploring the growing field of data science, this book showcases projects and companies focused on big data, artificial intelligence, and machine learning within the Illinois Science and Technology Park. It discusses how data-driven solutions are transforming industries such as healthcare, finance, and logistics.

9. *The Future of Innovation Ecosystems: Lessons from Illinois Science and Technology Park*
This forward-thinking book analyzes the Illinois Science and Technology Park as a model for innovation ecosystems worldwide. It discusses best practices, challenges, and policy implications for fostering technological growth. The book provides valuable insights for policymakers, entrepreneurs, and researchers aiming to build vibrant innovation communities.

Illinois Science And Technology Park

illinois science and technology park: Building the Illinois Innovation Economy National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Competing in the 21st Century: Best Practice in State and Regional Innovation

Initiatives, 2013-05-06 Responding to the challenges of fostering regional growth and employment in an increasingly competitive global economy, many U.S. states and regions have developed programs to attract and grow companies as well as attract the talent and resources necessary to develop innovation clusters. These state and regionally based initiatives have a broad range of goals and increasingly include significant resources, often with a sector focus and often in partnership with foundations and universities. These are being joined by recent initiatives to coordinate and concentrate investments from a variety of federal agencies that provide significant resources to develop regional centers of innovation, business incubators, and other strategies to encourage entrepreneurship and high-tech development. Building the Illinois Innovation Economy is a study of selected state and regional programs to identify best practices with regard to their goals, structures, instruments, modes of operation, synergies across private and public programs, funding mechanisms and levels, and evaluation efforts. This report reviews selected state and regional efforts to capitalize on federal and state investments in areas of critical national needs. This review includes both efforts to strengthen existing industries as well as specific new technology focus areas such as nanotechnology, stem cells, and energy in order to improve our understanding of program goals, challenges, and accomplishments. As a part of this review, The Committee on Competing in the 21st Century: Best Practice in State and Regional Innovation Initiatives is convening a series of public workshops and symposia involving responsible local, state, and federal officials and other stakeholders. These meetings and symposia will enable an exchange of views, information, experience, and analysis to identify best practice in the range of programs and incentives adopted. Building the Illinois Innovation Economy summarizes discussions at these symposia, fact-finding meetings, and commissioned analyses of existing state and regional programs and technology focus areas, the committee will subsequently produce a final report with findings and recommendations focused on lessons, issues, and opportunities for complementary U.S. policies created by these state and regional initiatives.

illinois science and technology park: Science and Technology Parks and Regional Economic Development Sara Amoroso, Albert N. Link, Mike Wright, 2019-12-11 This book is the first collection of scholarly writings on science and technology parks (STPs) that has an international perspective. It explores concrete ways to systematically collect information on public and private organizations related to their support of and activities in STPs, including incubation to start-up and scale-up, and collaborations with centers of knowledge creation. Rather than perpetuate the qualitative assessment of successful practices, the focus of this book is to present quantitative and qualitative evidence of the impact of STPs on regional development and to raise awareness on the importance of systematic data collection and analysis. Only through a systematic collection of data on fiscal identification numbers of companies, universities, and university spin-offs will it be possible to conduct current and especially future analyses on the impact of STPs on entrepreneurship, effectiveness of technology transfer, and regional economic development. To this extent, the synergistic views of academics, representatives from STPs, and policy experts are crucial.

illinois science and technology park: Best Practices in State and Regional Innovation Initiatives National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Competing in the 21st Century: Best Practice in State and Regional Innovation Initiatives, 2013-06-04 Most of the policy discussion about stimulating innovation has focused on the federal level. This study focuses on the significant activity at the state level, with the goal of improving the public's understanding of key policy strategies and exemplary practices. Based on a series of workshops and conferences that brought together policymakers along with leaders of industry and academia in a select number of states, the study highlights a rich variety of policy initiatives underway at the state and regional level to foster knowledge based growth and employment. Perhaps what distinguishes this effort at the state level is most of all the high degree of pragmatism. Operating out of necessity, innovation policies at the state level often involve taking advantage of existing resources and recombining them in new ways, forging innovative partnerships among universities, industry and government organizations, growing the skill base, and investing in

the infrastructure to develop new technologies and new industries. Many of these initiatives are being guided by leaders from the private sector and universities. The objective of Best Practices in State and Regional Innovation Initiatives: Competing in the 21st Century is not to do an empirical review of the inputs and outputs of various state programs. Nor is it to evaluate which programs are superior. Indeed, some of the notable successes, such as the Albany nanotechnology cluster, represent a leap of leadership, investment, and sustained commitment that has had remarkable results in an industry that is actively pursued by many countries. The study's goal is to illustrate the approaches taken by a variety of highly diverse states as they confront the increasing challenges of global competition for the industries and jobs of today and tomorrow.

illinois science and technology park: *OECD Territorial Reviews: The Chicago Tri-State Metropolitan Area, United States 2012* OECD, 2012-08-17 The OECD Territorial Review of the Chicago Tri-State metropolitan area assesses the region’s capacity to contribute effectively to regional and national economic performance and quality of life.

illinois science and technology park: U.S. Army Corps of Engineers Proposed Reorganization Plan United States. Congress. House. Committee on Public Works and Transportation. Subcommittee on Investigations and Oversight, 1994

illinois science and technology park: *The Capacity to Innovate* Sarah Giest, 2021 In The Capacity to Innovate, Sarah Giest provides insight into the collaborative and absorptive capacities needed to provide public support to local innovation through cluster organizations. The book offers a detailed view of the vertical, multi-level, and horizontal dynamics in clusters and cluster policy and addresses how they are managed and supported. Using the biotechnology field as an example, Giest highlights challenges in the collaborative efforts of public bodies, private companies, and research institutes to establish a successful eco-system of innovation in this sector. The book argues that cluster policy in collaboration with cluster organizations should focus on absorptive and collaborative capacity elements missing in the cluster context in order to improve performance. Currently, governments operate at different levels--local to supranational--in order to support clusters, and cluster policies are often pursued in parallel to other programs. As the book shows, this can lead to uncoordinated efforts and ineffective cluster strategies. Relational dynamics are often overlooked when working backwards from performance indicators, since their effects are largely indirect but Giest demonstrates that both the cluster organization and the cluster eco-system play a role. The Capacity to Innovate advocates for a coordinated effort by government and cluster organizations to support capacity elements lacking within the specific cluster context.--

illinois science and technology park: Nanotechnology Intellectual Property Rights Prabuddha Ganguli, Siddharth Jabade, 2017-12-19 We need to seamlessly integrate IPR in the standard graduate/post graduate courses in science, technology, commerce, creative arts, etc., without over burdening the students with law—Dr Prabuddha Ganguli, CEO, VISION-IPR Nanotechnology Intellectual Property Rights: Research, Design, and Commercialization offers an overview of the dynamics of development and commercialization in nanotech, where strategic integration of IP, R&D, and commercialization has become imperative. It demystifies issues of intellectual property rights (IPR) associated with research, design, technology transfer, and commercialization of innovations in technology-led areas such as nanotech. Gives all stakeholders vital information to instill confidence by helping them better understand their individual roles in the IPR process Designed for a diverse readership that may not have background knowledge of the legal nuances of IPR, this book clearly articulates techno-legal aspects of nano-related innovations to aid their effective integration into businesses. This resource stands apart by using numerous case studies and pictorial illustrations, addressing aspects ranging from ideation to commercialization of IP-enabled nanotechnology. It illustrates the evolving patent landscape in nanotechnology, explores the international patent classification system, and details patenting procedures in a range of

jurisdictions, including search for nanotechnology prior art and creation of search strategies. The authors discuss patent-led nanotechnology businesses, presenting a wide range of case studies that address construction of valuable patent portfolios, growth of start-ups, and consolidation of IP-led nanobusinesses through mergers, acquisitions, joint ventures, strategic investments, etc. They also cover patent litigations in nanotechnologies and the significance of strategically crafting agreements related to IP transactions. In addition, they address compliance with contractual obligations, the importance of well-drafted patent specifications, and sensitive aspects of conducting techno-legal due diligence prior to the development and marketing of products. Also covered are vulnerabilities in challenging/defending the validity of patents and negotiating settlements. Integrating use of the IPRinternalise® model for capacity building in human and infrastructural resources, the authors assess the future of IP landscaping in nanotechnology. Here, they focus on patentability, public perception of risks to health and ecosystems, institutionalized management of intellectual property rights, and the steps that will be necessary to meet these and other such challenges on the way to realizing profits in nanotech.

illinois science and technology park: Technology in the Garden Michael I. Luger, Harvey A. Goldstein, 2000-11-09 More than half of the 116 research parks now operating in the United States were established during the 1980s, with the aim of boosting regional economic growth. But until now no one has systematically analyzed whether research parks do in fact generate new businesses and jobs. Using their own surveys of all existing parks and case studies of three of the most successful--Research Triangle Park in North Carolina, Stanford Research Park in California, and the University of Utah Research Park--Michael Luger and Harvey Goldstein examine the economic impact of such facilities. As the name suggests, a research park is typically meant to provide a spacious setting where basic and applied technological research can be quietly pursued. Because of the experience of a few older and prominent research parks, new parks are expected to generate economic growth for their regions. New or old, most parks have close ties to universities, which join in such ventures to enhance their capabilities as centers of research, provide outlets for entrepreneurial faculty members, and increase job opportunities for graduate students. Too often, the authors say, the vision of incubating economic growth in a gardenlike preserve of research and development has failed because of poor planning, lack of firm leadership, and bad luck. Although the longest-lasting parks have met their original goals, the newer ones have enjoyed at best only slight success. Luger and Goldstein conclude that the older facilities have captured much of the market for concentrations of research and development firms, and they discuss alternative strategies that could achieve some of the same goals as research parks, but in a less costly way. Many of these alternatives continue to include a role for universities, and Luger and Goldstein shed fresh light on the linkage between higher education and the use of knowledge for profit.

illinois science and technology park: The Power of the Plan Richard F. Galehouse, 2019-07-01 The history and future of the unique partnership between the City of Columbia and the University of South Carolina State universities are more than just places of higher learning, more indeed than just campuses or buildings, and more than just students scurrying from class to class. They are a symbol of the future of the nation and a statement about the commitment the sponsoring state has made to its people. In turn each city or town that hosts, develops, and nurtures these institutions recognizes that it holds within the community one of the more precious jewels in a state's crown. So it is with the city of Columbia and the University of South Carolina. Richard F. Galehouse has been involved in the university's master planning work for more than twenty-five years, making him more than qualified to take a lapidary look not only at the present and unfolding

plans for the university, but also at the historic path that has brought it to its current luster. Encompassing its earliest days as Columbia College in 1801 (almost two decades before Thomas Jefferson's University of Virginia); the devastating effects of the Civil War; the crisis years between 1861 and 1915, when the institution was closed twice and reorganized five times; and some bungled urban planning in the 1950s and 60s, Galehouse's candid examination details the growth of the university and speaks hopefully about its present and its future. The city of Columbia and the University of South Carolina are unique in how they were designed to grow together, yet cosmopolitan in how they grapple collectively with the challenges and difficulties of combining the city's needs with the university's to create a symbiotic but nevertheless holistic community. The plan for this meeting of minds and needs is the meat of this narrative. The original and iconic Horseshoe grid of the city is echoed in the Innovista master plan outlined here, which will create in the city a shining setting for the university, one of its own most highly prized treasures. A foreword is provided by Patrick L. Phillips, global chief executive officer of the Urban Land Institute (2009–2018) and an instructor at the Harvard Graduate School of Design Executive Education Program and at the Carey Business School at Johns Hopkins University.

illinois science and technology park: Skokie Amanda J. Hanson, Richard J. Witry, 2010 Settled in the late 1840s and incorporated as Niles Centre in 1888, Skokie was founded by immigrants from Germany and Luxembourg who created a small-town rural community filled with farms and greenhouses. A short-lived real estate boom in the 1920s gave Skokie its current boundaries, streets, and sewer systems. Due to the Great Depression, however, these paved roadways remained vacant until after World War II. Aided by the construction of the Edens Expressway, Skokie experienced tremendous growth and became a bustling suburban community. Many of the families that settled in Skokie during this time were Jewish. In the last quarter century, other families moved to the suburb, many with Indo-Asian origins, leading to the ethnically diverse community that Skokie has become today.

illinois science and technology park: *Masterplanning Futures* Lucy Bullivant, 2012 Lucy Bullivant analyses the ideals and processes of international masterplans, and their role in the evolution of many different types of urban contexts in both the developed and developing world. Among the book's key themes are landscape-driven schemes, social equity through the reevaluation of spatial planning, and the evolution of strategies responding to a range of ecological issues and the demands of social growth. The author's research was enabled by grants from the Commission for Architecture and the Built Environment (CABE), the SfA (the Netherlands Architecture Fund), the Danish Embassy and support from the Alfred Herrhausen Society.

illinois science and technology park: Collaborative Innovation in Drug Discovery Rathnam Chaguturu, 2014-03-28 Can academia save the pharmaceutical industry? The pharmaceutical industry is at a crossroads. The urgent need for novel therapies cannot stem the skyrocketing costs and plummeting productivity plaguing R&D, and many key products are facing patent expiration. Dr. Rathnam Chaguturu presents a case for collaboration between the pharmaceutical industry and academia that could reverse the industry's decline. Collaborative Innovation in Drug Discovery: Strategies for Public and Private Partnerships provides insight into the potential synergy of basing R&D in academia while leaving drug companies to turn hits into marketable products. As Founder and CEO of iDDPartners, focused on pharmaceutical innovation, Founding president of the International Chemical Biology Society, and Senior Director-Discovery Sciences, SRI International, Dr. Chaguturu has assembled a panel of experts from around the world to weigh in on issues that affect the two driving forces in medical advancement. Gain global perspectives on the benefits and potential issues surrounding collaborative innovation Discover how industries can come together to prevent another Pharma Cliff Learn how nonprofits are becoming the driving force behind innovation Read case studies of specific academia-pharma partnerships for real-life examples of successful collaboration Explore government initiatives that help foster cooperation between industry and academia Dr. Chaguturu’s thirty-five years of experience in academia and industry, managing new lead discovery projects and forging collaborative

partnerships with academia, disease foundations, nonprofits, and government agencies lend him an informative perspective into the issues facing pharmaceutical progress. In Collaborative Innovation in Drug Discovery: Strategies for Public and Private Partnerships, he and his expert team provide insight into the various nuances of the debate.
