imperial family medicine durham: Ovarian Cancer 3 Frank Sharp, Peter Mason, Tony Blackett, Jonathan Berek, 2012-12-06 The Helene Harris Memorial Trust has become recognized as providing one of the most important international fora for the presentation of research in ovarian cancer. Four biennial meetings have taken place, the most recent of which was held between May 11-14, 1993, in Toronto, Canada. This forum has grown in stature from its inception in 1987 and has brought together interdisciplinary clinical and scientific researchers from around the world who are endeavouring to perform 'cutting edge' studies in the field. The assembled group of prestigious investigators met on this occasion to present their data, to exchange ideas, and to arrange collaborations with the goal of developing new means of detection, treatment and cure of ovarian cancer. The incentive for the establishment of the Trust and its international forum was the premature loss through ovarian cancer of Helene Harris, the wife of Mr John Harris. Mr Harris and the Trustees looked for a meaningful way to honour the memory of Helene and to advance the noble cause of gaining an increase in the scientific knowledge of the subject. For those of us who spend most of our waking hours assisting patients and their families who are devastated by this disease, the Trust's generosity provides inspiration, hope and the opportunity for their practical application in a unique professional forum.

imperial family medicine durham: *Imperial Pharmakon* Sandhya Shetty, 2025-09-26 In *Imperial Pharmakon*, Sandhya Shetty tells a story of western medicine in colonial India that is multi-sided, full of surprises, and unexpected detours. Highlighting side effects and complications, she nuances the conventional narrative that medicine in colonial places was consistently oppressive and evenly commanding, or unrelievedly prosaic in its articulations. Bringing into focus its official and informal entanglement in projects of colonial poesis, the book explicates medicine's grand rhetoric, sluggish humors, and often violent administrative argot, on one hand and its seductive address, its creation of new desires and proximities, and its allyship with endeavors beyond its remit, on the other. This examination of medicine's reversible moods is anchored in British India, a colony that had the longest exposure to imperial rule and administration. India offers a unique set of historical materials that permits Shetty's long and wide view of her subject. While a transimperial lens articulates colonial and metropolitan medical history, making the networked relationality of medicine newly visible and meaningful, the book's longue durée approach illumines broad shifts that develop and disclose themselves over time. The singularity of the British Indian case also prompts this study's reimagination of geographies, actors, and issues deemed relevant in established scholarship on colonial medicine and studies of literature and medicine. *Imperial Pharmakon* de-provincializes the latter and deepens the former by rendering the colonial medical past in a different key. Insisting on the analytic salience of literary and post/colonial forms of knowing, this book also brings a fresh ecological perspective to its reading. Moving across individual and collective scales and human/nonhuman divides, Shetty offers granular readings of historical events and figures, simultaneously keeping an eye on perimedical figures (the animal), unacknowledged connections (America), and structuring concepts (friend/enemy) that take us beyond colonial medicine proper, yet reveal themselves to be elements of its ecological unconscious, its thanatopolitical grammar, or its primordial capacity for hospitality.

imperial family medicine durham: *Cardiovascular Disease and Steroid Hormone Contraception*, 1998 Evaluates the strength and significance of evidence linking use of combined oral contraceptives to an increased risk of cardiovascular disease in women. Recommendations and conclusions reflect the consensus reached by a group of scientists, including researchers directly involved in several recent large-scale investigations of cardiovascular disease and hormone contraception. The experts also considered evidence that other factors, such as smoking, hypertension, diabetes, age, and family history, might influence the risk of cardiovascular disease in

users of combined oral contraceptives. In view of major recent changes in the hormonal content of these contraceptives and the prescribing patterns of providers, the assessment concentrates on data collected after 1980. The experts also aimed to determine whether the risk of disease is influenced by the estrogen or progestogen content of different preparations. To facilitate the comparison and interpretation of study results, the report opens with a discussion of the strengths and weaknesses of the different epidemiological approaches used to assess the safety of steroid contraceptives. Also discussed is the important distinction between the use of relative risk to examine epidemiological associations and the use of absolute risk to examine clinical importance. Against this background, the main part of the report examines the strength of evidence linking steroid contraceptives to an increased risk of acute myocardial infarction, ischaemic stroke, haemorrhagic stroke, and venous thromboembolism. Studies of combined oral contraceptives and progestogen-only contraceptives are considered separately for each disease. An effort is also made to determine whether conclusions, based on studies conducted in industrialized countries, are also valid for women living in the developing world. The assessment of findings from epidemiological studies is complemented by a review of possible biological explanations for the effects of combined oral contraceptives on cardiovascular functions. On the basis of all available evidence, the report concludes that mortality rates from cardiovascular disease are extremely low among women of reproductive age and that the added risk of using steroid contraceptives is also very low in users who do not smoke or have other risk factors for cardiovascular disease. A final section places these risks in perspective and offers balanced advice useful to providers of family planning when helping women to make informed choices about the use of hormonal contraceptives.

imperial family medicine durham: Global Surgery Adrian Park, Raymond Price, 2017-05-02 This text was developed as a book aimed at surgeons and allied health professionals that provides an introduction to the unmet needs, epidemiological, socioeconomic and even political factors that frame Global Surgery. Following upon an understanding of these issues, the text is a practical guide that enables the reader on several levels: to work cross culturally, build relationships and negotiate the logistical challenges of bringing surgical care to low resource settings; to develop an approach to the management of various clinical conditions that would be unfamiliar to most "western" surgeons. Global Surgery is a recently coined term that encompasses many potential meanings. Most would agree that it focuses on the growing recognition of the crisis of access to quality surgical care in low resource settings. Such scenarios exist on every continent. Increasingly surgeons, allied health professionals (NGO), Public Health / Health Policy professionals as well as governmental and non-governmental organizations are engaging in this field. Many surgeons have an interest in Global Health and a desire to become involved but feel ill equipped to do so and unsure where to start. Global Surgery: The Essentials serves as a ready resource to equip surgeons to manage clinical scenarios that lie beyond the scope of their training or current practice but that they would reasonably be expected to encounter in the field.

imperial family medicine durham: J. F. Bosher, 2010-04 During the century 1850-1950 Vancouver Island attracted Imperial officers and other Imperials from India, the British Isles, and elsewhere in the Empire. Victoria was the main British port on the north-west Pacific Coast for forty years before the city of Vancouver was founded in 1886 to be the coastal terminus of the Canadian Pacific Railway. These two coastal cities were historically and geographically different. The Island joined Canada in 1871 and thirty-five years later the Royal Navy withdrew from Esquimalt, but Island communities did not lose their Imperial character until the 1950s.--P. [4] of cover.
