indian test ride event: India's Nuclear Policy Bharat Karnad, 2008-10-30 This book examines the Indian nuclear policy, doctrine, strategy and posture, clarifying the elastic concept of credible minimum deterrence at the center of the country's approach to nuclear security. This concept, Karnad demonstrates, permits the Indian nuclear forces to be beefed up, size and quality-wise, and to acquire strategic reach and clout, even as the qualifier minimum suggests an overarching concern for moderation and economical use of resources, and strengthens India's claims to be a responsible nuclear weapon state. Based on interviews with Indian political leaders, nuclear scientists, and military and civilian nuclear policy planners, it provides unique insights into the workings of India's nuclear decision-making and deterrence system. Moreover, by juxtaposing the Indian nuclear policy and thinking against the theories of nuclear war and strategic deterrence, nuclear escalation, and nuclear coercion, offers a strong theoretical grounding for the Indian approach to nuclear war and peace, nuclear deterrence and escalation, nonproliferation and disarmament, and to limited war in a nuclearized environment. It refutes the alarmist notions about a nuclear flashpoint in South Asia, etc. which derive from stereotyped analysis of India-Pakistan wars, and examines India's likely conflict scenarios involving China and, minorly, Pakistan.

patent at 22, started his own bicycle company at 28, and at 32 was producing one of the most innovative bicycle lines in the world in a state-of-the-art factory. Along the way he flirted with baseball, briefly playing in the major leagues and patenting the game's rubberized home plate. In early 1901 Keating developed and marketed a ground-breaking motorcycle before either Indian or Harley-Davidson, and later successfully sued both companies for patent infringement. His company also manufactured automobiles beginning in 1898, producing both electric and gasoline powered vehicles. At the time of his death at 59, Keating held 49 patents--everything from bicycle and motorcycle designs to lunch-chairs to a modern flushing device for toilets. This book tells the story of Keating and his Keating Wheel Company, a Gilded Age story of unbridled inventiveness that encapsulates America's transformation into a society that would forever move on wheels.
