we stay or should we go? Millions of parents with children in public schools can't believe they're asking this question. But they are. And you should be asking it too. Almost overnight, America's public schools have become morally toxic. And they are especially poisonous for the hearts and minds of children from religious families of every faith—ordinary families who value traditional morality and plain old common sense. Parents' first duty is to their children—to their intellect, their character, their souls. The facts on the ground point to one conclusion: get out now.

math state exam 2017: Public and Private Education in America Casey D. Cobb, Gene V Glass, 2021-09-23 This title will give students and other readers a clear understanding of the true state of public and private education systems in the United States by refuting falsehoods, misunderstandings, and exaggerations—and confirming the validity of other assertions. This work is part of a series that uses evidence-based documentation to examine the veracity of claims and beliefs about high-profile issues in American culture and politics. Each book in the Contemporary Debates series is intended to puncture rather than perpetuate myths that diminish our understanding of important policies and positions; to provide needed context for misleading statements and claims; and to confirm the factual accuracy of other assertions. This particular volume examines beliefs, claims, and myths about public and private K-12 education in the United States. Issues covered include categories of public and private schools and variations in academic performance and socioeconomic status therein; controversies surrounding school choice, including school vouchers and charter schools; accountability and assessment of private and public schools;

debates about school environment, safety, and curricula; and teacher and administrator quality. All of these issues are examined in individualized entries, with objective responses grounded in up-to-date evidence.

math state exam 2017: Primary Mathematics Pedagogy at the Intersection of Education Reform, Policy, and Culture Sarah Murray, Princess Allotey, 2021-11-29 This volume provides an in-depth, comparative examination of how primary mathematics education is influenced by national education reform, policy, local resources, and culture in three different countries. By drawing on first-hand observations and interviews, as well as analysis of policy documents and learning resources, the book considers the viability of transferring best practices in primary mathematics education across global contexts. Three diverse countries – Ghana, the US, and Singapore – are explored. Similarities and differences are highlighted, and the influence of national and regional initiatives related to pedagogical strategies, teacher education, and cultural expectations are considered, to offer an insightful examination of how best practices might be shared across borders. This book will benefit researchers, academics, and postgraduate scholars with an interest in international and comparative education, mathematics, and educational policy. Those with a specialization in primary mathematics education, including pedagogy and teacher preparation, will also benefit from this book.

math state exam 2017: The School-to-Prison Pipeline Peter Thalheim, 2022-05-02 The school-to-prison pipeline is not what it is popularly advertised to be by the major media, whereby the installation of safety officers and security personnel in schools to protect the learning environment for all the students leads to mostly young men of color getting a record for disruptive behavior and being channeled into prison as the logical result of attending K-12 public schools. Rather, the school-to-prison pipeline is a conduit opened and maintained by the statists, those who promote the state before the citizen, to keep as many students as possible in the public school monopoly so that the two leading teacher unions, the National Education Association and the American Federation of Teachers, maintain as many dues-paying members as possible and to increase the number of dues payers, regardless of its impact on our children. The promoters of the school-to-prison pipeline deny African American, Hispanic, Asian, white, and other students of color from high-needs socioeconomic backgrounds a choice of where to go to school. If these parents or guardians want their children to go to a public charter or to use a voucher to select another private option, that is where the inquiry should end--the simple choice by their parents and guardians. Instead, the state wins by keeping more people in the state-run pipeline. The public unions win by keeping more unionized school staff and keeping the dues gravy train coming in to support unions, who in turn use their political strength to help elect candidates who favor unionized public schools versus school choice for our children and young people. How do the children win if their education options are artificially restricted? The students lose by being blocked in sometimes failing public schools with no viable choice to go elsewhere. And the poorer you are, the fewer choices you generally have. This denial of school choice would particularly impact black students, as blacks have disproportionately less money than the average American.

math state exam 2017: Grading for Equity Joe Feldman, 2018-09-25 “Joe Feldman shows us how we can use grading to help students become the leaders of their own learning and lift the veil on how to succeed. . . . This must-have book will help teachers learn to implement improved, equity-focused grading for impact.” --Zaretta Hammond, Author of Culturally Responsive Teaching & The Brain Crack open the grading conversation Here at last—and none too soon—is a resource that delivers the research base, tools, and courage to tackle one of the most challenging and emotionally charged conversations in today’s schools: our inconsistent grading practices and the ways they can inadvertently perpetuate the achievement and opportunity gaps among our students. With Grading for Equity, Joe Feldman cuts to the core of the conversation, revealing how grading practices that are accurate, bias-resistant, and motivational will improve learning, minimize grade inflation, reduce

failure rates, and become a lever for creating stronger teacher-student relationships and more caring classrooms. Essential reading for schoolwide and individual book study or for student advocates, *Grading for Equity* provides A critical historical backdrop, describing how our inherited system of grading was originally set up as a sorting mechanism to provide or deny opportunity, control students, and endorse a “fixed mindset” about students’ academic potential—practices that are still in place a century later A summary of the research on motivation and equitable teaching and learning, establishing a rock-solid foundation and a “true north” orientation toward equitable grading practices Specific grading practices that are more equitable, along with teacher examples, strategies to solve common hiccups and concerns, and evidence of effectiveness Reflection tools for facilitating individual or group engagement and understanding As Joe writes, “Grading practices are a mirror not just for students, but for us as their teachers.” Each one of us should start by asking, “What do my grading practices say about who I am and what I believe?” Then, let’s make the choice to do things differently . . . with *Grading for Equity* as a dog-eared reference.

math state exam 2017: Changing the Course of Failure Sandra Stotsky, 2018-05-18 The basic purpose of this book is to help policy makers at all levels of government understand that (1) widespread adolescent underachievement is not susceptible to solution by educational interventions no matter how much money is allocated to public education; and (2) there are unidentified educational and civic costs to focusing on low achievement and to expecting public institutions of education (for K-12 and college) to solve a growing social problem. Many policy makers seem to think that teachers/schools are the primary cause of low achievement. Educational institutions still cannot solve a non-education-caused problem and haven’t done so for over fifty years despite all the public and private money that has been allocated. The book concludes with suggested policies for addressing the damage to public education from “gap-closing” standards and with suggested areas for policy making in order to change the current course of failure for many low-achieving students.

math state exam 2017: The Buying and Selling of American Education Susan Tave Zelman, Margaret Erlandson Sorensen, 2022-10-17 American educators and policy makers have grown increasingly frustrated in recent decades as attempts to enhance equity and bring American student learning to the level experienced in other countries have faltered. Recent efforts have included the standards movement as well as broad expansion of “school choice.” These endeavors, which largely rely on market-based thinking, assume that individual schools and teachers have the will and ability to do better, if only prodded by competition and other sticks and carrots. Such attempts overlook flaws in a system developed to provide a “common” education while also subdividing resources to maintain privilege for some. This book traces the history of American education as a foundation to examining persistent weaknesses in education today. Meaningful reform and improvement, which are urgent needs, will require broad, systemic change, based on the engagement of many sectors. This book offers a vision for such reform. Following successful models in other countries suggests options for moving away from current, deeply enmired, systemic inequities, to a system better suited to meeting a broad range of educational needs. A portfolio of diverse schools, regionally administered and held accountable for student learning, presents an option for moving away from inequitable district structures and scatter-shot “choice” options. The critical questions are how to get there from here, and do we have the will to do so? The book concludes with suggestions on how to start the process.

math state exam 2017: *Mentoring at Minority Serving Institutions (MSIs)* Jeton McClinton, David S. B. Mitchell, Mark A. Melton, Gerunda B. Hughes, Tyrell Carr, 2018-05-01 The primary thrust of the proposed volume is to provide information for higher education minority serving institutions (MSIs) and other institutions and individuals interested in providing and/or improving mentoring programs and services to a variety of target groups. The editors are interested in how mentorship can produce beneficial outcomes for the mentor that may be similar to or different from outcomes in other educational contexts. Thus, the purpose of this volume is to showcase, through case studies and other forms of empirical research, how successful mentoring programs and relationships at MSIs have been designed and implemented. Additionally, we will examine the various definitions and slight variations of the meaning of the construct of mentoring within the MSI context. It is our intent to share aspects of mentoring programs and relationships as well as their outcomes that have heretofore been underrepresented and underreported in the research literature.
