math is hard meme: Handbook of Digital Resources in Mathematics Education Birgit Pepin, Ghislaine Gueudet, Jeffrey Choppin, 2024-06-21 This handbook presents the state-of-the art scholarship on theoretical frames, mathematical content, learning environments, pedagogic practices, teacher professional learning, and policy issues related to the development and use of digital resources in mathematics education. With the advent of more and more open access digital resources, teachers choose from the web what they see fit for their classroom; students choose 'in the moment' what they need for their projects and learning paths. However, educators and students often find it difficult to choose from the abundance of materials on offer, as they are uncertain about their quality and beneficial use. Their interdisciplinary research is based on two notions. First, that culture is crucial for understanding human behavior; unlike other organisms, socially transmitted beliefs, attitudes, and values heavily influence our behavior. Secondly, culture is part of biology: the capacity to acquire and transmit culture is a derived component of human psychology, and the contents of culture are deeply intertwined with our biology. Culture then is a pool of information, stored in the brains of the population that gets transmitted from one brain to another by social learning processes. Therefore, culture can account for both our outstanding ecological success as well as the maladaptations that characterize much of human behavior. math is hard meme: *The Art of Teaching Children* Phillip Done, 2023-07-18 An essential guide for teachers and parents that’s destined to become a classic, The Art of Teaching Children is one of those rare and masterful books that not only defines a craft but offers a magical reading experience. After more than thirty years in the classroom, award-winning teacher Phillip Done decided that it was time to retire. But a teacher’s job is never truly finished, and he set out to write the greatest lesson of his career: a book for educators and parents that would pass along everything he learned about working with kids. From the first-day-of-school jitters to the last day’s tears, Done writes about the teacher’s craft, classrooms and curriculums, the challenges of the profession, and the reason all teachers do it—the children. Drawing upon decades of experience, Done shares time-tested tips and sage advice: Real learning is messy, not linear. Greeting kids in the morning as they enter the classroom is an important part of the school day. If a student is having trouble, look at what you can do differently before pointing the finger at the child. Ask yourself: Would I want to be a student in my class? When children watch you, they are learning how to be people, and one of the most important things we can do for our students is to model the kind of people we would like them to be. Done tackles topics you won’t find in any other teaching book, including Back to School Night nerves, teacher pride, the Sunday Blues, Pinterest envy, teacher guilt, and the things they never warn you about in “teacher school” but should, like how to survive recess duty, field trips, and lunch supervision. Done also addresses some of the most important issues schools face today: bullying, excessive screen time, the system’s obsession with testing, teacher burnout, and the ever-increasing demands of meeting the diverse learning needs of students. But The Art of Teaching Children is

more than a guide to educating today's young learners. These pages are alive with inspiration, humor, and tales of humanity. Done welcomes us like visitors at Open House Night to the world of elementary school, where we witness lessons that go well and others that flop, periods that run smoothly and ones that go haywire when a bee flies into the room. We meet master teachers and new ones, librarians and lunch supervisors, principals and parents (some with too much time on their hands). We get to know kids who want to hold a ball and those who'd rather hold a marker, students with difficult home lives and children with disabilities, youngsters who need drawing out and those who happily announce (in the middle of a math lesson) that they have a loose tooth. With great wit and wisdom, irresistible storytelling, and boundless compassion, The Art of Teaching Children is the new educator's bible for teachers, parents, and all who work with kids and care about their learning and success.

math is hard meme: Claiming Space Sheila Bock, 2023-10-09 Claiming Space examines the growing tradition of decorating mortarboards at college graduations, offering a performance-centered approach to these material sites of display. Taking mortarboard displays seriously as public performances of the personal, this book highlights the creative, playful, and powerful ways graduates use their caps to fashion their personal engagement with notions of self, community, education, and the unknown future. Claiming the space of these graduation caps is a popular and widespread way that individuals make their voices heard, or rather seen, in the visual landscape of commencement ceremonies. The forms and meanings of these material displays take shape in relation to broader, ongoing conversations about higher education in the United States, conversations grounded in discourses of belonging, citizenship, and the promises of the American Dream. Integrating observational fieldwork with extensive interviews and surveys, author Sheila Bock highlights the interpretations of individuals participating in this tradition. She also attends to the public framings of this tradition, including how images of mortarboards have grounded online enactments of community through hashtags such as #LatinxGradCaps and #LetTheFeathersFly, as well as what rhetorical framings are employed in news coverage and legal documents in cases where the value of the practice is both called into question and justified. As university administrators and cultural commentators seek to make sense of the current state of higher education, these forms of material expression offer insight into how students themselves are grappling with higher ed's promises and shortcomings. Claiming Space is a meaningful contribution to folklore, cultural studies, media studies, and education.
