math lab ole miss: UNIVERSITY PAST TIME GLENN G. TUCKER, 2005-11-17 Dr. Tom Gorham

is a professor at Central States University located on the Mississippi River below St. Louis. One of his assignments is to secure funding for research projects in the College of Science and Engineering. Dr. John "Raj" Jhangli, a Professor of Physics, tries an experiment with an experimental powerful electromagnet with results that open a new realm in Physics. Tom's job is to coordinate the efforts to solve the dilemma of the experiment. The Navy Department lends an old escort destroyer to the University to supply added D.C. power to expand the experiment while the Pentagon tries to obtain control over the experiment as a defense project. One of their observers, an officious naval captain, interferes with the experiment and causes the experiment to blow up, sending a portion of the University back in time. Efforts to return only puts the group further into the past and the people and a portion of the university winds up in the year 1003 A.D. One of the primary problems facing the colony is the need for more people and children so the colony will not die out and the knowledge lost. Since women far outnumber men, much debate occurs as to how they can have more children when there are not enough males. This is solved by a sharing arrangement where a woman asks permission of a wife to share her husband for purposes of insemination, after which the man must

have nothing more to do with the woman. This arrangement makes many women unhappy and requires modification. The colony meets the Cahokian Indians and establish a common ground of support for each other when the colonists defeat a warring Indian tribe who attack the Cahokians. Further complications arise when the Indians desire to become "one people" which requires the council members to take an Indian "princess" and some women to marry an Indian "prince." This is done to make "One People" and thus seal the pact. The people struggle to survive; scrounging seeds, food and clothing from various sources and changing cars and trucks into fanning and mining equipment. By the end of the second year the colony is in good enough shape to search for and find oil, gold, coal and iron ore. The third year they are able to send the destroyer to Europe for supplies and more people and children. The book details the efforts for the colony to survive and grow and to reshape the direction of the world by having as their primary goal education of the people. The conditions of the various countries and the living conditions in the world in 1005 A.D. are described and the history of many of the plants and foods used by Americans today.

math lab ole miss: *Unsung Valor* A. Cleveland Harrison, 2009-09-28 Winner of the 2001 Forrest C. Pogue Prize from the Eisenhower Center for American Studies When drafted into the army in 1943, A. Cleveland Harrison was a reluctant eighteen-year-old Arkansas student sure that he would not make a good soldier. But inside thirty months he manfully bore arms and more. This book is his memoir about becoming a soldier, a common infantryman among the ranks of those who truly won the war. After the Allied victory in 1945, books by and about the major statesmen, generals, and heroes of World War II appeared regularly. Yet millions of American soldiers who helped achieve and secure victory slipped silently into civilian life, trying to forget the war and what they had done. Most remain unsung, for virtually none thought of themselves as exceptional. During the war ordinary soldiers had only done what they believed their country expected. Harrison's firsthand account is the full history of what happened to him in three units from 1943 to 1946, disclosing the sensibilities, the conflicting emotions, and the humor that coalesced within the naive draftee. He details the induction and basic training procedures, his student experiences in Army pre-engineering school, his infantry training and overseas combat, battle wounds and the complete medical pipeline of hospitalization and recovery, the waits in replacement depots, life in the Army of Occupation, and his discharge. Wrenched from college and denied the Army Specialized Training Program's promise of individual choice in assignment, students were thrust into the infantry. Harrison's memoir describes training in the Ninety-fourth Infantry Division in the U.S., their first combat holding action at Lorient, France, and the division's race to join Patton's Third Army, where Harrison's company was decimated, and he was wounded while attacking the Siegfried Line. Reassigned to the U.S. Group Control Council, he had a unique opportunity to observe both the highest echelons in military government and the ordinary soldiers as Allied troops occupied Berlin. This veteran's memoir reveals all aspects of military life and sings of those valorous but ordinary soldiers who achieved the victory.
