It will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school. Two veteran home educators outline the classical pattern of education -- the trivium -- which organizes learning around the maturing capacity of the child's mind. With this model, you will be able to instruct your child in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. math u see videos: The Homeschooling Parent Teaches MATH! Kerridwen Mangala McNamara, 2023-11-10 We all worry about our kids learning math. Even if the kids are in school, there's always a concern. Sometimes it's about the kid's concern... sometimes it's about their teacher's concern (parent-teacher or otherwise). But a lot of the time it's about US. It's about our own math-phobias - those 'fears, dislikes, or aversions' that we picked up from our own math experiences and that we inadvertently pass on to our kids. We don't want them to be afraid of math - we know that limits their opportunities and makes their lives harder and costs them more money - but we just can't help it. This book is here to help you deal with your own math-phobias and come to - if not outright enjoy math, to at least appreciate it and be able to convey it to your kids without passing on the fear. Kerridwen Mangala McNamara is NOT a 'math-lover' but she is a math-appreciator and has worked through most of these issues herself. Let her help you along your homeschooling journey and show you how to fight the Fear-of-Math monster so that it no longer intimidates you - or your kids!

math u see videos: Unschooling To University Judy L. Arnall, 2018-09-21 School is one option for education; homeschooling is the second, and unschooling is the third. Many parents are frustrated by the school system, perhaps because of bullying, crowded classrooms, and outdated, dull, online courses. Disengaged learners that have no say in their coerced curriculum tend to act out, tune out, or drop out. Education must change and unschooling is the fastest-growing alternative method of learning. Two decades ago, students registered with their local school based on their

house address. Now, with the internet, students are borderless. Learning can occur anywhere, anytime, anyway and from anyone—including self-taught. Self-directing their education, unschoolers learn through: - Play - Projects - Reading - Volunteering - Video games - Sports - Mentorship - Travel - Life This book explores the path of 30 unschooled children who self-directed all or part of their education and were accepted by universities, colleges, and other postsecondary schools. Most have already graduated. What children need most are close relationships—parents, teachers, siblings, relatives, coaches, and mentors within a wider community, not just within an institutional school. Educational content is everywhere. Caring relationships are not. Families that embrace unschooling, do not have to choose between a quality education and a relaxed, connected family lifestyle. They can have both.

Chapters include discussions on the uniqueness of each child, practical advice on teaching children of different ages at the same time, the centrality of the Bible in the education process, and approaches to teaching various subjects, and much more.
