med first health insurance: Setting the Course Institute of Medicine, Division of Health Care Services, Committee on the Immunization Finance Dissemination Workshops, 2002-10-17 Immunization is essential to disease prevention efforts in public health, but the U.S. health care system faces financial challenges that are affecting the delivery of immunization services. An earlier report from the Institute of Medicine (IOM), *Calling the Shots: Immunization Finance Policies and Practices*, pointed to the instability of the fundamental infrastructure that supports immunization programs throughout the United States, including growing financial burdens and operational complexities in immunization services, shortcomings in public- and private-sector investments in vaccine purchases and immunization programs, and fluctuations in insurance plans in the public and private health care sectors that create uncertainties regarding coverage of vaccine purchase and service delivery arrangements. In October 2001, a group of about 50 health officials, public health experts, health care providers, health plan representatives and purchasers, state legislative officials, and community leaders met at the Texas Medical Association in Austin to explore the implications of the IOM findings and recommendations for Texas. The 1-day workshop was the second in a series of four meetings organized by IOM with support from the Centers for Disease Control and Prevention to foster informed discussions about challenges for immunization finance and future strategies for strengthening immunization activities and the public health infrastructure that supports those activities. This report of the Austin workshop summarizes the findings of the previous IOM report and reviews continuing challenges in immunization finance for the nation and for individual states, with a particular focus on Texas. The report also highlights strategies proposed by individual workshop participants that can be used to address those challenges. Several presenters and discussants emphasized that adequate funding is necessary for immunization programs but that financial resources alone are not sufficient to guarantee success. Similarly, they indicated that no single agency or group in the public or the private sector should expect, or should be expected, to solve immunization problems. Speakers from both public and private health agencies observed that collaboration, consultation, and partnership efforts across levels of government and between the public and private sectors are essential.

med first health insurance: The Encyclopedia of New York State Peter Eisenstadt, 2005-05-19 The Encyclopedia of New York State is one of the most complete works on the Empire State to be published in a half-century. In nearly 2,000 pages and 4,000 signed entries, this single volume captures the impressive complexity of New York State as a historic crossroads of people and ideas, as a cradle of abolitionism and feminism, and as an apex of modern urban, suburban, and rural life. The Encyclopedia is packed with fascinating details from fields ranging from sociology and geography to history. Did you know that Manhattan's Lower East Side was once the most populated neighborhood in the world, but Hamilton County in the Adirondacks is the least densely populated county east of the Mississippi; New York is the only state to border both the Great Lakes and the Atlantic Ocean; the Erie Canal opened New York City to rich farmland upstate . . . and to the west.

Entries by experts chronicle New York's varied areas, politics, and persuasions with a cornucopia of subjects from environmentalism to higher education to railroads, weaving the state's diverse regions and peoples into one idea of New York State. Lavishly illustrated with 500 photographs and figures, 120 maps, and 140 tables, the Encyclopedia is key to understanding the state's past, present, and future. It is a crucial reference for students, teachers, historians, and business people, for New Yorkers of all persuasions, and for anyone interested in finding out more about New York State.

med first health insurance: The Workers' Health Fund in Eretz Israel Shifra Shvarts, 2002
The first study to research the history of the health funds established by Jewish laborers in Israel. The history of Kupat Holim, the health organization of workers in Israel, began at the 2nd Convention of Jewish agricultural workers in Judea in December 1911. Due to the lack of health services within the economic means of the workers, and the refusal of the farmer-employers to extend health services to their employees, the Jewish agricultural workers in Eretz-Israel -- at that time, a distant province of the far-flung Ottoman empire -- decided to establish a workers' health fund [kupat holim in Hebrew]. In the years 1912-15, two funds similar to the ones in Judea were also established in the north and center of the country. In the first years, the health funds did not provide workers with medical assistance on their own. Only in 1913, with the outbreak of the First World War, were the health funds transformed from insuring organizations into ones that provided medical assistance services themselves. With the establishment of the General Federation of Labor [1920], the health funds were amalgamated into a single organization -- the Federation's Kupat Holim [1921]. The unification of Kupat Holim ultimately determined the organization's future -- transforming it from a small, local, temporary body with a few dozen members into a national entity and a key factor in health services in Israel to this day. This volume seeks to describe the growth of Kupat Holim up to the point where it was transformed into a central health organization in Israel; its relationship with its parent-organization, the General Federation of Labor and its rivalry with its competitor in the health field, Hadassah; its evolution from an organization solely for laborers to one open to all; the efforts on the part of Kupat Holim during the British Mandate [1918-1948] to bring about legislation for a compulsory health insurance law; and the formulation of the basic principle that underlie the work of Kupat Holim to this day -- the principle of national and social responsibility for the provision of equal health services to all. Dr. Shifra Shvarts is the head of the Health Systems Management Department of the Faculty of Health Sciences and School of Management at Ben-Gurion University.

med first health insurance: *Holding Health Care Accountable* E. Haavi Morreim, 2001-08-16
Health care in the US and elsewhere has been rocked by economic upheaval. Cost-cuts, care-cuts, and confusion abound. Traditional tort and contract law have not kept pace. Physicians are still expected to deliver the same standard of care -- including costly resources - to everyone, regardless whether it is paid for. Health plans can now face litigation for virtually any unfortunate outcome, even those stemming from society's mandate to keep costs down while improving population health. This book cuts through the chaos and offers a clear, persuasive resolution. Part I explains why new economic realities have rendered prevailing malpractice and contract law largely anachronistic. Part II argues that pointing the legal finger of blame blindly or hastily can hinder good medical care. Instead of whom do we want to hold liable, we should focus first on who should be doing what, for the best delivery of health care. When things go wrong, each should be liable only for those aspects of care they could and should have controlled. Once a good division of labor is identified, what kind

of liability should be imposed depends on what kind of mistake was made. Failures to exercise adequate expertise (knowledge, skill, care effort) should be addressed as torts, while failures to provide promised resources should be resolved under contract. Part III shows that this approach, though novel, fits remarkably well with basic common law doctrines, and can even enlighten ERISA issues. With extensive documentation from current case law, commentary, and empirical literature, the book will also serve as a comprehensive reference for attorneys, law professors, physicians, administrators, bioethicists, and students.
