med in early childhood education: Developmental Psychology and Early Childhood Education David Whitebread, 2011-12-01 The importance of high quality early childhood education is now universally recognised, and this quality crucially depends upon the practitioners who work with our young children, and their deep understanding of how children develop and learn. This book makes a vital contribution to this understanding, providing authoritative reviews of key areas of research in developmental psychology, and demonstrating how these can inform practice in early years educational settings. The book's major theme is the fundamental importance of young children developing as independent, self-regulating learners. It illustrates how good practice is based on four key principles which support and encourage this central aspect of development: - secure attachment and emotional warmth - feelings of control and agency - cognitive challenge, adults supporting learning and children learning from one another - articulation about learning, and opportunities for self-expression. Each chapter includes: - typical and significant questions which arise in practice related to that area of development - an up-to-date review of key research, including insights from observational and experimental work with young children, from evolutionary psychology, and from neuroscientific studies of the developing brain - practical exercises intended to deepen understanding and to inform practice - questions for discussion - recommended further reading. This book provides an invaluable resource for early years students and practitioners, by summarizing new research findings and demonstrating how they can be translated into excellent early years practice. David Whitebread is Senior Lecturer in Developmental Psychology and Early Years Education in the Faculty of Education, University of Cambridge.

med in early childhood education: Handbook of Early Childhood Education Robert C. Pianta, W. Steven Barnett, Laura M. Justice, 2012-03-16 Early childhood education receives more attention and funding today than ever before, yet the quality of available programs varies widely. What interventions are most effective for promoting young children's school readiness? How can

educators partner successfully with diverse families to help close the income- and race-based achievement gap? What are the obstacles to dissemination of evidence-based child care and preschool practices, and how can these obstacles be overcome? Bringing together foremost experts, this forward-thinking book reviews the breadth of current knowledge about early education and identifies important priorities for practice and policy. Part I describes the contemporary landscape of early education in the United States: what programs are in place; how they are utilized, administered, and funded; and their educational aims. Part II presents cutting-edge research on curricula and teaching methods that work. Coverage encompasses strategies for fostering specific skills--including language, literacy, and early mathematics and science--and for enhancing academic development overall. Next, Part III turns to the critical areas of social development and the family context of early education. Chapters describe exemplary approaches to supporting young children's executive functioning, self-regulation, social-emotional learning, and mental health. Rounding out the volume, Part IV addresses ways to better serve children with special needs, as well as how to strengthen the roles of early educators through professional development, higher education, and certification. Comprehensive and authoritative, this volume combines an impeccable research grounding with a strong applied focus. It belongs on the desks of researchers, teacher educators, and graduate students in early education, early literacy, child development, and special education; school and child care administrators; and education policymakers.

med in early childhood education: Methodology for Research with Early Childhood Education and Care Professionals Cecilia Wallerstedt, Eva Brooks, Elin Eriksen Ødegaard, Niklas Pramling, 2022-11-28 This open access book addresses the growing trend in the field of early childhood education and care (ECEC) research named collaborative knowledge building in which researchers and ECEC personnel collaborate. This kind of research encompasses a number of approaches, such as design studies, action studies, Learning Studies, Lesson Studies, and combined research and development studies. There are important differences between these approaches, but they also share some features, which makes it possible to see them as examples of a particular tradition of knowledge building. Collaborative knowledge building constitutes close ties between developing practices of early childhood education and care, and generating empirically grounded theoretical knowledge. This book contributes to the methodology of practices-developing research by mapping this movement through exemplifying themes actualised in such studies, and through conceptualizing important and recurring gains and challenges. It also describes how the latter can be taken on.

med in early childhood education: Promoting Transformative Practices for Sustainability in Early Childhood Education and Care Fabio Dovigo, Sule Alici, 2025-09-30 Offering a fresh perspective on sustainability in the realm of Early Childhood Education and Care (ECEC), Promoting Transformative Practices for Sustainability in Early Childhood Education and Care invites educators, policymakers and researchers to rethink how young children's engagement with sustainability extends beyond nature experiences, promoting a richer, multi-dimensional understanding. This

unique book provides a wider understanding of the relationship between early childhood education and sustainability through a multi-faceted picture of the political, economic, social, cultural and natural dimensions embedded in sustainable policies and practices. Aligning with UNESCO's vision of sustainability, this book recognises the interdependencies between these dimensions, emphasising the importance of addressing intergenerational equity and social justice, especially for children to be prepared for and thrive in a rapidly evolving world. This book is structured in two main sections – the first explores innovative methodologies like sensory ethnography, constructivist Grounded Theory and critical participatory action research, while offering frameworks for effective education for sustainability (ECEfS); the second part evaluates recent ECEfS projects, focusing on promoting children's rights, agency and well-being, and highlights how shared leadership and advocacy can drive sustainable futures in ECEC settings. By combining research-based insights with practical examples, this book is a valuable resource for educators seeking to implement transformative practices in ECEC. Its focus on empowering educators and fostering child-centred advocacy makes it an essential read for those committed to building a sustainable future through early education.
