medical research institute kitano hospital: Regenerative Medicine in Otolaryngology
Juichi Ito, 2015-05-07 This book describes an exciting new movement using regenerative medicine to treat patients with otolaryngological diseases. The emerging field of regenerative medicine uses tissue engineering, which combines medicine and engineering not only to treat the diseases themselves but also to enable recovery of the function of affected areas. As otolaryngology covers wide regions, including many diseases of the head and neck, the book is divided into sections, each corresponding to a different anatomical structure — the ear, nose, oral cavity, pharynx, larynx and head and neck. The structural developments of each region, the underlying mechanisms of diseases specific to these regions, their experimental models and proposals for new regenerative treatment are all discussed in detail. The various diseases and symptoms considered in the book include inner ear and middle ear diseases, rhinitis, nasal sinusitis and otolaryngological cancers. To date there have been few clinical studies reporting regenerative medical applications in the field of otolaryngology, but in this volume leading authors present the latest research findings to help provide new therapies for patients in the future. This state-of-the-art information makes the book a valuable professional reference work for all doctors and researchers who focus on regenerative treatments in the field of otolaryngology and neuroscience.

medical research institute kitano hospital: IgA Nephropathy Today Yasuhiko Tomino,

2007-01-01 A further step towards unraveling this mysterious disease Primary IgA nephropathy has first been described as a new disease entity almost 40 years ago. This disorder, considered to be an immune-complex-mediated glomerulonephritis, is characterized by granular deposition of IgA (mainly IgA1) and C3 in the glomerular mesangial areas and is defined as nephropathy showing proliferative changes in the glomerular mesangial cells and increases in the mesangial matrices. Apart from being one of the most common types of chronic glomerulonephritis, it is also the most frequent case of end-stage renal disease. But even though continuing efforts have gradually clarified various aspects of the pathogenesis of the disease, specific treatment is not yet available. In this publication, international nephrologists and basic scientists report the most recent data on IgA nephropathy. Starting with clinical reviews on topics such as the clinico-pathological classification, new treatment approaches, and the role of renal biopsies, the focus then shifts towards basic reviews on, for example, candidate genes, the pathogenic role of IgA receptors or immune complex formation. Updates on clinical and basic advances, discussing among other things the influence of obesity or various therapeutic approaches, make up the second part of the book. Presenting up-to-date information on this still mysterious disease, the publication at hand constitutes a valuable source of information for nephrologists, general practitioners, residents and interns.

medical research institute kitano hospital: Practical Guide to Hereditary Breast and Ovarian Cancer Daisuke Aoki, Seigo Nakamura, Yoshio Miki, 2023-10-31 This book shares cutting-edge evidence on Hereditary Breast and Ovarian Cancer (HBOC) treatment, delivering facts on breast cancer, gynecologic oncology, and basic research to contribute to clinicians' practices. Each chapter presents the latest clinical techniques, basic experimental results, and the best-chosen research findings. The book is based on the works presented at the Japanese Organization of Hereditary Breast and Ovarian Cancer (JOHBOC) and a special chapter delivers a study based on the extensive data from the Japanese HBOC patients registered in the society's database, presenting novel evidence for further advancement in the field. The practice for HBOC has been rapidly increasing due to the clinical development of poly(ADP-ribose) polymerase inhibitors and the spread of companion diagnostics. In addition, the insurance coverage of a part of HBOC treatment raised social awareness in Japan, and the book illustrates not only clinical efforts but also issues related to the social system and the efforts of the association of related organizations. Hereditary Breast and Ovarian Cancer – Annual meeting of JOHBOC will be of interest to breast surgeons, obstetricians and gynecologists, pancreatic cancer surgeons, and urologists engaged in HBOC treatment through the implementation of companion diagnostics for PARP inhibitors administration. Also, physicians occupied in genetic medicine who perform genetic testing and medical staff practicing HBOC will find this book insightful. It is also for HBOC patients and their families, medical administrators in the social system of HBOC practice. Editors and authors hope to contribute to the equalization and widespread of HBOC practice and serve as a foundation for future advances in the disease's treatment and medical practice.

medical research institute kitano hospital: The development of deep brain stimulation for neurological and psychiatric disorders: clinical, societal and ethical issues Thomas E. Schlaepfer, Chiara Saviane, To date more than eighty thousand patients worldwide have received deep brain stimulation (DBS), mainly in order to alleviate symptoms of treatment-resistant disorders such as tremor associated with Parkinson's disease, essential tremor, chronic pain, epilepsy, obsessive compulsive disorder, major depression and Tourette syndrome. The number of indications for neurological and psychiatric conditions using this technology is rapidly increasing, raising important societal and ethical issues that cannot be dealt with by scientists and clinicians on their own, but need discussions among all possible stakeholders on questions such as: what are the comprehensive risks and benefits of this technology? what is the real impact on patients' life, in terms of health, quality of life and personal identity? This Research Topic provides an overview of potentials and limitations of deep brain stimulation as used to treat neurological and psychiatric conditions, bringing together Mini Reviews, Perspectives and Opinion papers from key stakeholders interested in the development and social impact of this technology. It is also a continuation of the debate that started among scientists, clinicians, patients, sociologists, journalists, philosophers and other experts during the "brains in dialogue on deep brain stimulation" workshop that was organized in September 2010 in Warsaw, Poland, by the FP7 project bid - brains in dialogue (www.neuromedia.eu) coordinated by the Interdisciplinary Laboratory of SISSA (Trieste, Italy).

medical research institute kitano hospital: *Personalized Medicine and Neurosurgery* M. Yashar S. Kalani, Nicholas Theodore, 2017-11-22 The Precision Medicine Initiative, which was instituted by President Barack Obama on January 20, 2015, highlighted the importance that advances in genomics and related “-omic” approaches have made to science and medicine, and it set the stage for their federally funded and mandated integration into the delivery of health care. Whether these advances comprise large-scale approaches, such as The Cancer Genome Atlas, which provides a modern classification of cancers based on molecular profiles, or genealogy initiatives, which seek to trace the movement of our early ancestors out of Africa, genomic technology has taken us closer to developing targeted therapies and a refined understanding of our evolutionary journey. It is against this backdrop that we summarized some of the recent advances in the field of precision medicine, or personalized medicine, as they pertain to neurosurgery. In this e-Book collection provided by Frontiers in Surgery: Neurosurgery, we present a collection of articles by leaders in the field of neurosurgery that highlight domains using a personalized approach for the treatment of patients or avenues when personalization is possible and when it will likely alter the care of patients with neurological diseases.
