medicine for business and industry: Making Medicine a Business Pierre-Yves Donzé, 2018-03-24 This book goes back to the origins of the transformation of health and medicine into a business, during the first part of the twentieth century, focusing on the example of Japan. In the past hundred years, medicine has gone from being a charitable activity to a large economic sector, amounting to 12-15% of the GDP in many developed countries, and one of the fastest-growing businesses around the world. Despite the mounting presence of the medical industry, there is a lack of academic work detailing this major transformation. The objective of this book is to fill this gap and address the following question: how did medicine become a business? Using over ten years of research in the field, Pierre-Yves Donzé argues that economic factors and business factors were decisive in transforming the way that medicine enters our lives. This book will be of interest to historians of medicine, business historians, health economists, scholars in medical humanities, and more.

medicine for business and industry: Asian Medical Industries Stephan Kloos, Calum Blaikie, 2022-02-28 This book develops the concept of Asian Medical Industries as a novel perspective on traditional Asian medicines. Complementing and updating existing work in this field,

the book provides a critical and comparative analytic framework for understanding Chinese Medicine, Ayurveda, Sowa Rigpa, and Japanese Kampo in the 21st century. No longer subaltern health resources or conservative systems of traditional knowledge, these medicines have become an integral part of modern Asia as innovative, lucrative industries. Ten original case studies employ insights from anthropology, history, geography, pharmaceutical sciences, botany, and economics to trace the transformation of Asian medical traditions into rapidly growing and dynamic pharmaceutical industries. Collectively, these contributions identify this as a major phenomenon impacting Asian and global healthcare, economics, cultural politics, and environments. The book suggests that we can learn more about Asian medicines today by approaching them as industries rather than as cultural or epistemic systems. Asian Medical Industries is a highly original resource for students and scholars across a range of academic fields such as anthropology, history, and Asian studies, as well as medical practitioners, health sector actors, and policymakers.

medicine for business and industry: The Business of Health Pierre-Yves Donzé, Paloma Fernández Pérez, 2022-02-23 This book offers a discussion about the dramatic development of healthcare business around the world during the twentieth century. Through a broad range of cases in Asia, Europe and the US, it shows how health was transformed into a fast-growing and diversified industry. Health and medicine have developed as one of the fastest growing sectors of the economy around the world during the twentieth century. However, very little is known about the conditions of their transformation in a big, globalized business. This book discusses the development of health industries, tackling the various activities in manufacturing (drugs, biotechnology, medical devices, etc.), infrastructure (hospital design and construction) and services (nursing care, insurances, hospital management, etc.) in relation to healthcare. The business history of health carried out in this book offers a systemic perspective that includes the producers (companies), practitioners (medical doctors) and users (patients and hospitals) of medical technology, as well as the providers of capital and the bodies responsible for regulating the health system (government). The chapters in this book were originally published as a special issue of the journal Business History.

medicine for business and industry: The Ethos of Medicine in Postmodern America Arnold R. Eiser, 2013-12-24 Has postmodern American culture so altered the terrain of medical care that moral confusion and deflated morale multiply faster than both technological advancements and ethical resolutions? The Ethos of Medicine in Postmodern America is an attempt to examine this question with reference to the cultural touchstones of our postmodern era: consumerism, computerization, corporatization, and destruction of meta-narratives. The cultural insights of postmodern thinkers—such as Foucault, Deleuze and Guattari, Lyotard, Baudrillard, Bauman, and Levinas—help elucidate the changes in healthcare delivery that are occurring early in the twenty-first century. Although only Foucault among this group actually focused his critique on medical care itself, their combined analysis provides a valuable perspective for gaining understanding of contemporary changes in healthcare delivery. It is often difficult to envision what is happening in the psychosocial, cultural dynamic of an epoch as you experience it. Therefore it is useful to have a technique for refracting those observations through the lens of another system of thought. The prism of postmodern thought offers such a device with which to “view the eclipse” of changing medical practice. Any professional practice is always thoroughly embedded in the social and cultural matrix of its society, and the medical profession in America is no exception. In drawing upon the insights of key Continental thinkers such and American scholars, this book does not necessarily endorse the views of postmodernism but trusts that much can be learned from their insight. Furthermore, its analysis is informed by empirical information from health services research and the sociology of medicine. Arnold R. Eiser develops a new understanding of healthcare delivery in the twenty-first century and suggests positive developments that might be nurtured to avoid the barren “Silicon Cage” of corporate, bureaucratized medical practice. Central to this analysis are current healthcare issues such as the patient-centered medical home, clinical practice guidelines, and electronic health records. This interdisciplinary examination reveals insights valuable to anyone working in postmodern thought, medical sociology, bioethics, or health services research.
