political science research ideas: Finding your Social Science Project John Gerring, Jason Seawright, 2022-10-13 The most important step in social science research is the first step - finding a topic. Unfortunately, little guidance on this crucial and difficult challenge is available. Methodological studies and courses tend to focus on theory testing rather than theory generation. This book aims to redress that imbalance. The first part of the book offers an overview of the book's central concerns. How do social scientists arrive at ideas for their work? What are the different ways in which a study can contribute to knowledge in a field? The second part of the book offers suggestions about how to think creatively, including general strategies for finding a topic and heuristics for discovery. The third part of the book shows how data exploration may assist in generating theories and hypotheses. The fourth part of the book offers suggestions about how to fashion disparate ideas into a theory.

political science research ideas: *Public Policy Lessons from the AIDS Response in Africa* Fred Eboko, 2020-10-29 *Public Policy Lessons from the AIDS Response in Africa* examines how the interplay between national state dynamics in Africa and the global political arena has shaped the global AIDS response, and in this context develops a framework for analysing public policy action more broadly in contemporary Africa. By applying comparative political sociology to AIDS public action, this book identifies four political models that are applicable to public initiatives. Fred Eboko goes on to test these in other domains – namely, the malaria and tuberculosis health subsectors, and the education and environment sectors. By articulating global and national connections and contributing a critical perspective grounded in African scholarship and French political science, the author builds a bold and ambitious framework with the potential to enable coherent and effective public policy action in Africa. political science research ideas: Developing Creativity in the Classroom Todd Kettler, Kristen N. Lamb, Dianna R. Mullet, 2021-09-03 Developing Creativity in the Classroom applies the most current theory and research on creativity to support the design of teaching and learning. Creative thinking and problem solving are at the heart of learning and application as students prepare for innovation-driven careers. This text debunks myths about creativity and teaching and, instead, illustrates productive conceptions of creative thinking and innovation, including a constructivist learning approach in which creative thinking enhances and strengthens conceptual understanding of the curriculum. Through models of teaching that support creativity and problem solving, this book extends the idea of a creative pedagogy to the four core curriculum domains. Developing Creativity in the Classroom focuses on explanations and examples of how creative thinking and deep learning merge to support engaging learning environments, rising to the challenge of developing 21st-century competencies.

political science research ideas: Ethics and Experiments Scott Desposato, 2015-12-22 For most of political science's history, discussions about professional ethics had nothing to do with human subjects. Professional ethics involved integrity in the classroom, fair tenure and promotion rule, and the careful avoidance of plagiarism. As most research was observational, there was little need for attention to how scholarly activities might directly affect the subjects of our work. Times have changed. The dramatic growth in the use of experiments in social science, especially overseas, is generating unexpected ethical controversies. The purpose of this volume is to identify, debate, and propose practical solutions to the most critical of these new ethical issues. A leading team of internationally distinguished political science scholars presents the first examination of the practical and ethical challenges of research with human subjects in social science and policy studies. Part 1 examines contextual challenges provided by experiments conducted overseas - questions of culture, religion, security, and poverty. Part 2 examines questions of legal constraints on research, focusing on questions of foreign review of international experiments. Part 3 tackles the critical issues in field experiments, including deception and consent, impact on elections and careers, the boundaries of the public officials' exemption, and the use of partner organizations to avoid Institutional Review Body (IRB) review. Part 4 considers strategies for the future, including training and education, IRB reform, institutional changes, and norm development.

political science research ideas: Making Economics Public Vicki Macknight, Fabien Medvecky, 2023-05-22 Economics - macro, micro and mysterious - is integral to everyday life. But despite its importance for personal and collective decision making, it is a discipline often viewed as technical, arcane and inaccessible and thus overlooked in public discourse. This book is a call to arms to bring the discipline of economics more into the public domain. It calls on economists to think about how to make their knowledge of the economics public. And it calls on those who specialise in communicating expert knowledge to help us learn to communicate about economics. The book brings together scholars and practitioners working at the early stages of an emerging field: the public communication of, and public engagement with, economics. Through a series of short essays from academics and practitioners, the book has two key goals: first and foremost, it will make a case for why we need to make economics public and for the importance of having a clear vision of what it means to make economics public. Secondly, it suggests some ways that this can be done featuring contributions from practitioners, including economists, who are engaging audiences

in newspapers, museums and beyond. This book is essential reading for those in economics with an interest in making economics public and those already in the many fields dedicated to communicating expert knowledge in public spaces who have an interest in where economics can fit.
