pop pop the final solution: Serial Killing on Screen Sarah E. Fanning, Claire O'Callaghan, 2022-11-30 This book explores the representation of real-life serial murders as adapted for the screen and popular culture. Bringing together a selection of essays from international scholars, *Serial Killing on Screen: Adaptation, True Crime and Popular Culture* examines the ways in which the screen has become a crucial site through which the most troubling of real-life crimes are represented, (re)constructed and made accessible to the public. Situated at the nexus of film and screen studies, theatre studies, cultural studies, criminology and sociology, this interdisciplinary collection raises questions about, and implications for, thinking about the adaptation and representation of true crime in popular culture, and the ideologies at stake in such narratives. It discusses the ways in which the adaptation of real-life serial murder intersects with other markers of cultural identity (gender, race, class, disability), as well as aspects of criminology (offenders, victims, policing, and profiling) and psychology (psychopathy, sociopathy, and paraphilia). This collection is unique in its combined focus on the adaptation of crimes committed by real-life criminal figures who have gained international notoriety for their plural offences, including, for example, Ted Bundy, Ian Brady and Myra Hindley, Aileen Wuornos, Jack the Ripper, and the Zodiac, and for situating the tales of these crimes and their victims' stories within the field of adaptation studies.

pop pop the final solution: Metaheuristics Mauricio G.C. Resende, J. Pinho de Sousa, 2013-06-29 Combinatorial optimization is the process of finding the best, or optimal, solution for problems with a discrete set of feasible solutions. Applications arise in numerous settings involving operations management and logistics, such as routing, scheduling, packing, inventory and production management, location, logic, and assignment of resources. The economic impact of combinatorial optimization is profound, affecting sectors as diverse as transportation (airlines, trucking, rail, and shipping), forestry, manufacturing, logistics, aerospace, energy (electrical power,

petroleum, and natural gas), telecommunications, biotechnology, financial services, and agriculture. While much progress has been made in finding exact (provably optimal) solutions to some combinatorial optimization problems, using techniques such as dynamic programming, cutting planes, and branch and cut methods, many hard combinatorial problems are still not solved exactly and require good heuristic methods. Moreover, reaching optimal solutions is in many cases meaningless, as in practice we are often dealing with models that are rough simplifications of reality. The aim of heuristic methods for combinatorial optimization is to quickly produce good-quality solutions, without necessarily providing any guarantee of solution quality.

Metaheuristics are high level procedures that coordinate simple heuristics, such as local search, to find solutions that are of better quality than those found by the simple heuristics alone: Modern metaheuristics include simulated annealing, genetic algorithms, tabu search, GRASP, scatter search, ant colony optimization, variable neighborhood search, and their hybrids.

Alexandru Florian and an international group of contributors unveil how and why Romania, a place where large segments of the Jewish and Roma populations perished, still fails to address its recent past. Coming from a variety of perspectives, these essays provide a compelling view of what memories exist, how they are sustained, how they can be distorted, and how public remembrance of the Holocaust can be encouraged in Romanian society today.
