We have not made much progress in learning how to cooperate with one another more effectively or how to conduct our conflicts more peacefully. Instead, we have increased the lethality of our combat through revolutions in weapons technology and military training. political science at ucla: Identities Matter Angela Ju, 2025-03-21 Grandchildren of immigrants belonging to groups that have achieved high socioeconomic status choose which identities to leverage in the host country's political arena. The scholarship about political incorporation often assumes that immigrant groups and their descendants find it in their best interest to pursue mainstream political incorporation. Those immigrants who belong to ethnic minority groups might choose to engage politically in a number of ways, depending on their racial or economic status; Identities Matter: The Politics of Immigration and Incorporation looks at how descendants of minoritized groups who have achieved, generally speaking, high socioeconomic status choose to identify politically in their adopted nations. Contrary to many expectations about political and social incorporation of immigrants, it finds that assimilation is not necessarily advantageous for groups who are from or associated with countries that are more economically developed than their host country. When this is the case, these immigrant communities may choose to strategically associate themselves with the heritage country over the one in which they reside. The book draws on original research among third-generation Japanese and Jewish Brazilians to determine the seemingly paradoxical ways in which the descendants of immigrants choose which identities to emphasize in the political arena. It shows that immigrant communities' strategies of political incorporation and social integration are framed within where they fall in existing ethno-racial and socioeconomic hierarchies, and that perceptions of discrimination drive third-generation descendants to vote in line with their ethnic interests. One particularly interesting finding is that in Brazil, a country that suffers from high levels of political corruption, Japanese Brazilian politicians are often incentivized to emphasize their Japanese-ness over their Brazilian-ness to convey to voters that they are more honest as political candidates than their more Brazilian opponents. Finally, ethnic community-based organizations allow these groups to leverage their identities transnationally.

political science at ucla: Comparing autocracies in the early Twenty-first Century Aurel Croissant, Steffen Kailitz, Patrick Koellner, Stefan Wurster, 2016-03-17 Authoritarianism research has evolved into one of the fastest growing research fields in comparative politics. The newly awakened interest in autocratic regimes goes hand in hand with a lack of systematic research on the results of the political and substantive policy performance of variants of autocratic regimes. The contributions in this second volume of Comparing Autocracies are united by the assumption that the performance of political regimes and their persistence are related. Furthermore, autocratic institutions and the specific configurations of elite actors within authoritarian regime coalitions induce dictators to undertake certain policies, and that different authoritarian institutions are therefore an important piece of the puzzle of government performance in dictatorships. Based on these two prepositions, the contributions explore the differences between autocracies and democracies, as well as between different forms of non-democratic regimes, in regard to their outcome performance in selected policy fields; how political institutions affect autocratic performance and persistence; whether policy performance matter for the persistence of authoritarian rule; and what happens to dictators once autocratic regimes fall. This book is an amalgam of articles from the journals Democratization, Contemporary Politics and Politische Vierteljahresschrift.

political science at ucla: The Human Face of Global Mobility Adrian Favell, 2017-07-12 Alongside flows of trade and capital, the free movement of professionals, technical personnel, and students is seen as a key aspect of globalization. Yet not much detailed empirical research has been completed about the trajectories and experiences of these highly skilled or highly educated international migrants. What little is known about these forms of global mobility, and the politics that surround them, contrasts with the abundant theories and accounts of other types of international migration--such as low income economic migration from less developed to core countries in the international political economy. Drawing on the work of a long-standing discussion group at the Center for Comparative and Global Research of UCLA's International Institute, this collection bridges conventional methodological divides, bringing together political scientists, sociologists, demographers, and ethnographers. It explores the reality behind assumptions about these new global migration trends. It challenges widely held views about the elite characteristics of these migrants, the costs and consequences of the brain drain said to follow from the migration of skilled workers, the determinants of national policies on high skilled migrants, and the presumed effortlessness of professional mobility in an integrating world. The volume also sheds new light on international student migration, the politics of temporary, non-immigrant workers in the United States, new international forms of regulating movement, and the realities of the everyday lives of multinational employees in the world's transnational cities. Key differences between the regional contexts of this migration in Europe, North America, and the Asia-Pacific are also emphasized.
