pre employment assessment for progressive: The Ethics of Employment Screening for Psychopathy Brian K. Steverson, 2020-10-14 In 2006, Babiak and Hare alerted the public to the danger of "corporate psychopaths," psychopathic individuals occupying positions of power in business organizations. Since then, academicians and the public media have advertised their presence, documented the harm they can cause, and issued a call to arms to identify corporate psychopaths and eliminate their presence in the workplace. Very little attention has been paid, however, to the ethics of such a "seek and destroy" mission. The Ethics of Employment Screening for Psychopathy argues that employment screening for psychopathy would be illegal and unethical. On legal grounds, Brian K Steverson argues that psychopathy would qualify as a protected disability under the Americans with Disabilities Act, and, hence, medical screening to identify potential corporate psychopaths would be in violation of the ADA. On ethical grounds, the case is made that such screening would violate a social commitment to equal opportunity, would constitute a morally unjustified violation of personal privacy, and would, in practice, not produce the intended benefits, while at the same time inflicting harm on the subjects of the screening.

pre employment assessment for progressive: Vocational Rehabilitation Charles Gobelet, Franco Franchignoni, 2006-01-02 It gives us great pleasure to write the preface to this book, the second in the series of monographs produced by the European Academy of Rehabilitation Medicine. No part of medicine, no clinical intervention, is complete without thinking about its effect on the person's life and the quality thereof. One of the most powerful determinants of this is work; a source not only of income, but of satisfaction and a sense of purpose and worth. The Academy, founded in 1969, is composed of senior European doctors specializing in Rehabilitation and Physical Medicine. It meets regularly to discuss matters of importance in the field, including teaching, research and ethical matters. It recognises that the ability of the speciality and of related ones to decrease dependency and increase autonomy and quality of life needs to be better known. Hence the production of these monographs. They will help readers access a vast amount of literature on the practice of rehabilitation and its effectiveness. They should be particularly useful to young doctors preparing for the European Boards certification in Physical and Rehabilitation Medicine as they are authoritative and cover subjects in depth. Topics covered in the series range from basic sciences to the most applied areas.
