Airlines in China have increasingly incorporated premium economy sections on long-haul and select medium-haul flights to appeal to a wider market. The introduction of this class reflects a global trend towards more diversified seating options that balance comfort and cost.

Definition and Market Position

Premium economy on China air carriers typically includes wider seats, increased pitch (legroom), and upgraded meal services compared to economy class. It bridges the gap between economy and business, often attracting frequent flyers, professionals, and families traveling internationally.

Growth and Demand Factors

The growth of the middle class in China and the expansion of international travel have fueled demand for premium economy seats. Airlines have responded by expanding their fleets with aircraft equipped with dedicated premium economy cabins. However, for decades airlines have been collapsing around the globe as the business of managing airline operations has become stressed due to price competition. This is detrimental to air carriers since air transport products and services are the same. Moreover, it impacts other industries such as tourism, hotels, and restaurants, which contribute to the derailment

of economic and social activities. Post-financial crisis, China has emerged as the largest or second largest trading partner for most countries. It has become the second largest market for Fortune 500 companies like Starbucks, Apple, and Nike and drives growth for Hollywood and commodity products. Yet the profits come at a price for countries and companies alike—they must adhere to the political goals of Beijing or else face economic punishment or outright banishment. Using primary research from

interviews with hundreds of business executives and government officials, *The War for China's Wallet* will help companies understand how to profit from China's outbound economic plans as well as a shifting consumer base that is increasingly nationalistic.
