premium economy lan airlines: The Airline Revolution Gordon Mills, 2016-07-15 When starting new airlines in response to government deregulation, entrepreneurs in the U.S. and Europe reduced some traditional service qualities (to reduce costs), concentrated on non-stop services between city pairs not already so connected, improved on-time performance, and offered low fares

to win leisure travelers from the incumbents and to encourage more travel. In recent developments, some of the new airlines have offered optional extras (at higher fares) to attract business travelers and entered major routes alongside the legacy carriers. Within both the U.S. and Europe, deregulation removed most geographical barriers to expansion by short-haul airlines. Later, limited deregulation spread to other world regions, where many short-haul routes connect city pairs in different countries, and where governments have retained traditional two-country mechanisms restricting who may fly. To gain access to domestic routes in other countries, some new airlines are setting up affiliate companies in neighboring countries, with each company legally controlled in the country of domicile. With air travel growing strongly, especially in Asia, a common result is intense, but potentially short-lived, competition on major routes. The recent developments give clear signposts to likely mid-term outcomes, and make this an opportune time to report on the new-airline scene. The Airline Revolution will provide valuable economic analysis of this climate to students, airline professionals advancing to senior positions, public servants and others who provide advice to governments.

premium economy lan airlines: Competitive Dynamics Of Air Transport In Brazil:

2008-2014 Luiz Fernando Abel, 2021-06-04 Commercial aviation in Brazil has been facing great changes in the past years, from the regulatory point of view to a competition perspective, given the increase in demand, revision of past legislation and the rise of new players in this market. The airline business has showed to be very dynamic in Brazil, with the rise and fall of a number of companies. One of them specifically, called VARIG - Portuguese acronym for Viação Aérea Rio-Grandense -, which stopped operating domestic and international routes in 2006, changed the market significantly, since it was the longest standing air company in the country and also the market leader. This scenario of disruption, after VARIG's bankruptcy, gave room to the consolidation of other major companies already operating at that time - TAM and Gol -, as well as the emergence of Avianca Brazil and Azul, which absorbed part of the increasing demand for air transport in the country and placed this market into a new era of competition. All these factors combined with the flexibility given, due to revision of legislation - referring to prices and alliances, for example -, have transformed the way business in the industry are run. Hence the changes in the way air companies operate nowadays and provide different types of services. Thus, the purpose of this work is to understand what are the competitive advantages of the Brazilian airline companies to face the local competition, given the changes between 2008 and 2014 in this sector's environment. In addition, this work aims to identify competitive changes with possible new entrants to this market in the future.

premium economy lan airlines: *Looking Beyond the Runway* Nawal K. Taneja, 2016-12-05 The global airline industry, facing significant changes and discontinuity is prompted and forced to deal with a new normal. Who would have imagined a few years ago that: - a significant percentage of consumers in the US now prefer to fly low-cost airlines instead of full-service airlines because they perceive the product to be better, - airlines would generate up to a third of their total income from non-ticket revenue, - many low-cost airlines would add complexity to their original simple business models through the development of code-share agreements, the use of global distribution systems, and travel agents to distribute their seats, - Jetstar, a low-cost subsidiary of Qantas, would grow faster and be more profitable than its parent, - a survey carried out by Ryanair would show that 42 percent of passengers would be willing to stand on short (one hour) flights if they could pay 50 percent less than seated passengers, - passengers could pay as little as US\$2,000 for a transatlantic

Business Class ticket on top-brand airlines, - Lufthansa would have ownership in airlines based in Austria, Belgium, Italy, Switzerland, Turkey, the UK, and the US, and that it would continue to pursue equity ownership in airlines based in Poland and Scandinavia, or - the Japanese and Canadian governments would struggle to find different ways to bail out their heretofore flag carriers? To deal with this upcoming new normal, airlines have to go beyond their short-term circumstantial strategies - they need strategic renewal of their ageing business model. In this candidly-written book, Nawal Taneja explains what will separate the winners from the losers. He maintains the leaders will be the airlines that: (1) exploit this crisis-driven change to their best advantage, (2) learn to work around the airline-inherent constraints that prevent them from running their businesses just like other businesses, (3) learn from successes and failures of other global enterprises, (4) sharpen their business intelligence, analytics, and strategic agility, and (5) proactively explore the pockets of growth in this emerging-markets century. To help airline executives become informed of new competitive games, the author analyzes numerous business sectors such as auto, hospitality, retail, technology, and entertainment. For example, relevant lessons can be learned from the strategic mistakes made by the US automakers. Likewise, emergent and compelling insights can be gained in superior customer experience from Ritz Carlton and Zappos, and in value-creating innovation from Cirque du Soleil and Zipcar. The book also features a multitude of forewords from airlines and related businesses to provide readers with multiple perspectives on the changing landscape in the global airline industry. Nawal Taneja is a career analyst of the global airline industry with wide-ranging experience in the aviation industry, academia, and public policy. Encouraged by industry executives, he has written five other books for practitioners in the global airline industry, including FASTEN YOUR SEATBELT: The Passenger is Flying the Plane and Flying Ahead of the Airplane.

premium economy lan airlines: Air Transport in the 21st Century John F. O'Connell, George Williams, 2016-12-05 Airlines are buffeted by fluctuating political and economic landscapes, ever-changing competition, technology developments, globalization, increasing deregulation and evolving customer requirements. As a consequence all sectors of the air transport industry are in a constant state of flux. The principle aim of this book is to review current trends in the airline industry and its related suppliers, thereby providing an insight into the forces that are changing its dynamics. The factors that are reshaping the structure of the industry are examined with a view to identifying the key issues whose impact will be critical in the future. The book features two very distinct sections. The first contains short contributions from industry executives at CEO/VP level from airlines, aircraft/engine manufacturers, safety and navigational provider organisations, who have set out their take of where the airline industry is heading. This commercial input sets the scene for the book and provides the bridge to the second section, which is composed of 18 chapters written by distinguished academic authors. Each chapter presents a valuable insight into a specific area of the air transport industry, including: airlines, airports, cargo, deregulation, the environment, navigation, strategy, information technology, security and tourism. The shared objective of the authors is to describe and explain the core competencies that are determining the current shape of the industry and to examine the forces that will change its direction going forward. The book is written in a management style and will appeal to all levels of personnel who work for airlines across the world. It is also written for airport authorities, aerospace manufacturers, regulatory and government transportation agencies, researchers and students of aviation management, transport studies, tourism and the wider air transport industry.
