premium economy air france 777: Skyteam Leon E. Pennington, 2000 This paper began with a brief history of the development of the airplane and the airline industry in the United States and Europe. Use of aircraft for mail delivery and passenger travel was discussed as well as political environments and stages of development which led to the emergence of airlines themselves. As airlines developed and international travel became common, international political considerations of this activity were examined. This activity impacted the development of use of strategic alliances in the airline industry. Market-based economics were discussed, and the permitted level of cooperative effort among the airlines was examined from a historical and current point of view. To determine the impact of strategic alliances in the air transport industry, a detailed examination of the structure and operational aspects of two member airlines in a newly formed alliance was conducted using historical and current information from industry sources in English and French. Each member airline, Delta Air Lines, and Air France, was examined with comparative reasoning in order to evaluate their operations in a standardized fashion. The analysis chapter, an evaluation of the effectiveness of the strategic alliances the member airlines had formed, was conducted using objective, industry-wide criteria. This analysis led to a conclusion that strategic alliances in the air transport industry are beneficial and essential to provide an Anywhere to Everywhere service to customers.--Abstract

premium economy air france 777: Liberalization in Aviation Hartmut Wolf, Peter Forsyth, David Gillen, Kai Hüscherlath, Hans-Martin Niemeier, 2016-05-06 The last few decades have witnessed substantial liberalization trends in various industries and countries. Starting with the deregulation of the US airline industry in 1978, regulatory restructuring took place in further network industries such as telecommunications, electricity or railways in various countries around the world. Although most of the liberalization movements were initially triggered by the worrying performances of the respective regulatory frameworks, increases in competition and corresponding improvements in allocative and productive efficiency were typically associated with the respective liberalization efforts. From an academic perspective, the transition from regulated industries to liberalized industries has attracted a substantial amount of research reflected in many books and research articles which can be distilled to three main questions: (1) What are the forces that have given rise to regulatory reform? (2) What is the structure of the regulatory change which has occurred to date and is likely to occur in the immediate future? (3) What have been the effects on industry efficiency, prices and profits of the reforms which have occurred to date? Liberalization in Aviation brings together renowned academics and practitioners from around the world to address all three questions and draw policy conclusions. The book is divided into five sections, in turn dealing with aspects of competition in various liberalized markets, the emergence and growth of low-cost carriers, horizontal mergers and alliances, infrastructures, and concluding with economic assessments of liberalization steps so far and proposed steps in the future.
