Definition of Prejudice in AP Psychology

In AP Psychology, prejudice is defined as a preconceived negative judgment or attitude toward a person or group based solely on their membership in a particular social category. This social category can be based on race, ethnicity, gender, religion, age, or other distinguishing characteristics. Unlike stereotypes, which represent generalized beliefs about a group, prejudice involves an evaluative component—often emotional—that results in bias or discrimination. Prejudice is considered an affective response, meaning it is rooted in feelings such as hostility, fear, or dislike, rather than objective reasoning.

The prejudice AP Psychology definition emphasizes that prejudice is an unfair and irrational attitude, frequently resistant to change even when contradictory evidence is presented. This concept is distinct from discrimination, which refers to the behavioral manifestation of prejudice through actions that disadvantage targeted groups. Understanding this distinction is critical for comprehending how cognitive and emotional processes translate into social behaviors.

Theories Explaining Prejudice

Several psychological theories have been proposed to explain the origins and persistence of prejudice. These theories provide insight into how prejudice develops at individual and group levels, highlighting cognitive, motivational, and social factors.

Social Identity Theory

Social Identity Theory posits that individuals derive part of their self-concept from their membership in social groups. To boost self-esteem, people favor their in-group (the group to which they belong) by enhancing its status relative to out-groups. This favoritism can lead to prejudice against members of out-groups, as it reinforces positive identity and group cohesion.

Realistic Conflict Theory

Realistic Conflict Theory suggests that prejudice arises from competition between groups for limited resources such as jobs, territory, or power. When groups perceive that their goals are incompatible, hostility and negative attitudes toward the competing group increase, fostering prejudice and discrimination.

Cognitive Theories

Cognitive approaches focus on how mental processes contribute to prejudice. Stereotyping is a key mechanism, as it simplifies social information by categorizing people into groups, often leading to overgeneralizations and biased perceptions. Schema theory explains how existing mental frameworks influence how new information about a group is interpreted, often reinforcing prejudiced beliefs.

Causes and Sources of Prejudice

Prejudice develops through a complex interplay of psychological, social, and environmental factors. Identifying these causes helps in understanding why prejudice is pervasive and often resistant to change.

Socialization and Cultural Influences

From an early age, individuals learn prejudiced attitudes through family, peers, media, and cultural norms. Socialization processes transmit societal values and stereotypes that shape how groups are perceived. Cultural narratives may perpetuate certain biases, continuing cycles of prejudice across generations.

Economic and Political Factors

Economic insecurity and political instability can heighten intergroup tensions, as groups compete for resources and influence. Leaders or institutions may exploit these tensions to promote divisive ideologies, reinforcing prejudiced attitudes to maintain power.

Psychological Needs and Motivations

Prejudice may satisfy psychological needs such as the desire for certainty, control, and self-esteem. For example, categorizing people into groups reduces ambiguity in social perception, while derogating out-groups can elevate one's own social standing.

- Fear of the unknown or unfamiliar
- Need to justify social inequalities
- Desire to conform to in-group norms
- Projection of personal insecurities

Effects and Consequences of Prejudice

The presence of prejudice has profound effects on both individuals and society. These consequences can be psychological, social, and systemic, often perpetuating inequality and social conflict.

Impact on Targeted Individuals

Victims of prejudice frequently experience stress, reduced self-esteem, and mental health challenges such as anxiety and depression. Discrimination resulting from prejudice limits access to education, employment, and social opportunities, affecting life outcomes and well-being.

Social and Institutional Consequences

Prejudice contributes to social division, conflict, and the marginalization of groups. It can become institutionalized in laws, policies, and practices that systematically disadvantage certain populations. This institutional prejudice undermines social cohesion and perpetuates cycles of discrimination.

Reinforcement of Stereotypes

Prejudice sustains stereotypes by selectively confirming biased beliefs about groups. This confirmation bias makes it difficult to challenge or change prejudiced attitudes, as individuals interpret ambiguous behavior in ways that support their existing views.

Reducing Prejudice: Psychological Interventions

Addressing prejudice requires deliberate psychological and social interventions aimed at promoting understanding, empathy, and equality. Several evidence-based strategies have been identified to reduce prejudicial attitudes and behaviors.

Intergroup Contact Theory

According to Intergroup Contact Theory, positive interaction between members of different groups under conditions of equal status, common goals, and cooperation can reduce prejudice. Such contact helps dismantle stereotypes and build empathy.

Education and Awareness Programs

Educational initiatives that promote diversity awareness, critical thinking, and cultural competence can challenge existing prejudices. These programs encourage individuals to reflect on their biases and develop more inclusive attitudes.

Cognitive Retraining and Perspective-Taking

Cognitive retraining techniques involve confronting and modifying automatic prejudiced thoughts.

Perspective-taking exercises encourage individuals to see situations from the viewpoint of out-group members, fostering empathy and reducing bias.

1. Promote meaningful intergroup interactions
2. Implement diversity and inclusion training
3. Encourage self-reflection on biases
4. Support policies that reduce social inequalities
