preschool meet the teacher template free: Outdoor Learning Environments Helen Little, 2020-07-25 Educators have a key pedagogical role in promoting early years outdoor play in natural environments. Active outdoor play involving risk-taking has been linked to positive effects on social health and behaviour, and encourages physical activity and motor skill development. At the same time, it has been recognised that opportunities for children to experience outdoor learning have been reduced in recent decades due to the impacts of technology, urbanisation and social change. This book brings together renowned authors, with research and professional experience in a range of disciplines, to provide a comprehensive guide to developing positive and engaging outdoor learning environments in the early years. Part 1 looks at pedagogy and outdoor environments, and considers the value of risk-taking and developing a young child's appreciation of the natural world. Part 2 examines the key principles involved in the design and planning of these spaces, such as applying the relevant equipment standards and regulations. Part 3 explores how educators can develop an understanding of children's own perspectives on outdoor spaces, including promoting agency and recognising the importance of private playspaces. Part 4 examines different cultural perspectives on outdoor play, including Indigenous approaches, while Part 5 considers the range of experiences possible beyond purposefully-designed spaces, from visiting nature reserves to exploring urban environments. 'A much needed and comprehensive resource for pre-service teachers and educators of young children that encompasses philosophies, theories, pedagogy and practice for purposeful engagement of children in all kinds of outdoor spaces in Australia.' - Dr Kumara Ward, Director of Academic Program: Early Childhood Education, Western Sydney University 'This seminal work will provide a shared language and framework for educators, policy developers, community builders and researchers in exploring the justifications for engaging children in well considered outdoor learning places and spaces.' - Leanne Grogan, School of Education, Outdoor and Environmental Studies, La Trobe University.

preschool meet the teacher template free: It's about Time Phyllis Moen, 2018-08-06 How do two-career couples manage in a one-career world? It's about Time examines this mismatch between outdated scripts and the experiences of dual-earner couples. It broadens our understanding of occupational and family career strategies couples use in light of the widening gap between their real lives and the outdated work-hour and career-path roles, rules, and regulations they confront. It's about Time draws on the data from the Cornell Couples and Careers Study to demonstrate that: *Regardless of income, time is a scarce commodity in dual-earner households. With two jobs, two commutes, often long work hours, high job demands, business travel, several cars, children, ailing relatives, and/or pets - time is always an issue. *Time is built into jobs and career paths in ways that make continuous full-time (40 or typically more hours a week) paid work a fact of life in American society. *The multiple strands of life—career, family and personal—unfold over time. Spouses move through their life courses in tandem, with early choices - to have children or not, to work long hours or not, to switch jobs or not, to relocate for his or her career or not—all having long-term consequences for life quality and for gender inequality. The evidence from this book suggests that it is about time for the United States to confront the realities and needs of contemporary working couples and indeed, all members of the new workforce. To do so requires more than Band-Aid, short-term (and often short-sighted) policy remedies. It's about Time argues that it is essential to re-imagine and reconfigure work hours, workweeks, and occupational career paths in ways that address the widening gaps between the time needs and goals of workers and their families, at all ages and stages of the life course.

preschool meet the teacher template free: Handbook of Research on Using Educational Robotics to Facilitate Student Learning Papadakis, Stamatios, Kalogiannakis, Michail, 2020-12-05 Over the last few years, increasing attention has been focused on the development of children's acquisition of 21st-century skills and digital competences. Consequently, many education scholars have argued that teaching technology to young children is vital in keeping up with 21st-century employment patterns. Technologies, such as those that involve robotics or coding apps, come at a time when the demand for computing jobs around the globe is at an all-time high while its supply is at an all-time low. There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking, algorithmic thinking, and project management. Additionally, recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering. The Handbook of Research on Using Educational Robotics to Facilitate Student Learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps. The book argues that while learning about computing, young people should also have opportunities to create with computing, which have a direct impact on their lives and their communities. It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action: (1) computational identity, which shows the importance of young people's development of scientific identity for future STEM growth; and (2) digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways. Covering subthemes including student competency and assessment, programming education, and teacher and mentor development, this book is ideal for teachers, instructional designers, educational technology developers, school administrators, academicians, researchers, and students.
