preserve at research park: *Whispers in the Pines* Joanna Burger, 2006 In this book, naturalist Joanna Burger takes us on a series of delightful trips through the Pine Barrens. From the Albany Pine Bush, the Long Island Barrens, and the New Jersey Pine Barrens in the Northeast, to the pinelands of South Carolina and Florida, Burger describes in lively detail how these habitats have come to harbor such a unique assemblage of species. She introduces us to amphibians and reptiles, neotropical migrants and other birds, and a range of common and unusual mammals. Burger also traces the regions' historic and geologic backgrounds, and the impact of human occupation from the time of the paleo-Indians to the present. She revisits the tension between development and preservation, reminding us that a healthy pine barren region requires uninterrupted land and rejuvenating fires, both of which are increasingly jeopardized. *Whispers in the Pines* is essential reading for everyone concerned with the history and preservation of these unique landscapes and their wildlife.

preserve at research park: Urban Ecology John Marzluff, Eric Shulenberger, Wilfried Endlicher, marina Alberti, Gordon Bradley, Clare Ryan, Craig ZumBrunnen, Ute Simon, 2008-01-03 Urban Ecology is a rapidly growing field of academic and practical significance. Urban ecologists have published several conference proceedings and regularly contribute to the ecological, architectural, planning, and geography literature. However, important papers in the field that set the foundation for the discipline and illustrate modern approaches from a variety of perspectives and regions of the world have not been collected in a single, accessible book. *Foundations of Urban Ecology* does this by reprinting important European and American publications, filling gaps in the published literature with a few, targeted original works, and translating key works originally published in German. This edited volume will provide students and professionals with a rich background in all facets of urban ecology. The editors emphasize the drivers, patterns, processes and effects of human settlement. The papers they synthesize provide readers with a broad understanding of the local and global aspects of settlement through traditional natural and social science lenses. This interdisciplinary vision gives the reader a comprehensive view of the urban ecosystem by introducing drivers, patterns, processes and effects of human settlements and the relationships between humans and other animals, plants, ecosystem processes, and abiotic conditions. The reader learns how human institutions, health, and preferences influence, and are influenced by, the others members of their shared urban ecosystem.

Meyer, 2002 Environmental impacts associated with the degradation of off-highway vehicle (OHV) trails have become a serious concern in many regions. Such areas are referred to as degraded trail segments. Degraded trails develop when trail use exceeds the trail's natural carrying capacity. This document provides land managers and trail users with an introduction to OHV trail

degradation and outlines a framework for management responses.
