Definition and Importance of AUM

Assets under management, or AUM, quantify the total value of assets that an investment firm manages on behalf of its clients. It is an essential measure used by investors and industry analysts to assess the size and success of an asset management company. Higher AUM often correlates with increased revenue through management fees and greater influence in financial markets. For Principal Asset Management, maintaining and growing AUM is vital for sustaining operational scalability and competitive advantage.

Market Performance Impact

Market conditions directly affect the value of assets managed by Principal Asset Management. Bull markets typically increase the valuation of equity holdings and other growth-oriented investments, boosting AUM. Conversely, bear markets or economic downturns can reduce asset values and temporarily shrink AUM. The firm's portfolio diversification strategies aim to mitigate these market volatilities, ensuring more stable asset growth.

Client Inflows and Retention

Principal Asset Management leverages strong client relationships and reputation to attract fresh capital from both institutional and individual investors. Effective communication, transparency, and consistent returns are critical factors that influence investor confidence and sustained inflows.

Fee Structures and Revenue Models

The asset management fees charged by Principal Asset Management, typically a percentage of AUM, incentivize the firm to grow and maintain its asset base. Competitive fee structures aligned with industry standards ensure that clients receive value while the firm secures steady revenue streams. Fee reductions or performance-based fees can also impact AUM growth dynamics.

principal asset management aum: Global Financial Stability Report, April 2015

International Monetary Fund. Monetary and Capital Markets Department, 2015-04-15 The current report finds that, despite an improvement in economic prospects in some key advanced economies, new challenges to global financial stability have arisen. The global financial system is being buffeted by a series of changes, including lower oil prices and, in some cases, diverging growth patterns and monetary policies. Expectations for rising U.S. policy rates sparked a significant appreciation of the U.S. dollar, while long term bond yields in many advanced economies have decreased—and have turned negative for almost a third of euro area sovereign bonds—on disinflation concerns and the prospect of continued monetary accommodation. Emerging markets are caught in these global cross currents, with some oil exporters and others facing new stability challenges, while others have gained more policy space as a result of lower fuel prices and reduced inflationary pressures. The report also examines changes in international banking since the global financial crisis and finds that these changes are likely to promote more stable bank lending in host countries. Finally, the report finds that the asset management industry needs to strengthen its oversight framework to address financial stability risks from incentive problems between end-investors and portfolio managers and

the risk of runs due to liquidity mismatches.

principal asset management aum: EU Securities and Financial Markets Regulation

Niamh Moloney, 2023 Over the decade or so since the global financial crisis rocked EU financial markets and led to wide-ranging reforms, EU securities and financial markets regulation has continued to evolve. The legislative framework has been refined and administrative rulemaking has expanded. Alongside, the Capital Markets Union agenda has developed, the UK has left the EU, and ESMA has emerged as a decisive influence on EU financial markets governance. All these developments, as well as the Covid-19 pandemic, have shaped the regulatory landscape and how supervision is organized. EU Securities and Financial Markets Regulation provides a comprehensive, critical, and contextual account of the intricate rulebook that governs EU financial markets and its supporting institutional arrangements. It is framed by an assessment of how the regime has evolved over the decade or so since the global financial crisis and considers, among other matters, the post-crisis reforms to key legislative measures, the massive expansion of administrative rulemaking and of soft law, the Capital Markets Union agenda, the development of supervisory convergence as the means for organizing pan-EU supervision, and ESMA's role in EU financial markets governance. Its coverage extends from capital-raising and the Prospectus Regulation to financial market intermediation and the MiFID II/MiFIR and IFD/IFR regimes, to the new regulatory regimes adopted since the global financial crisis (including for benchmarks and their administrators), to retail market regulation and the PRIIPs Regulation, and on to the EU's third country regime and the implications of the UK's departure from the EU. This is the fourth edition of the highly successful and authoritative monograph first published as EC Securities Regulation. Heavily revised from the third edition to reflect developments since the global financial crisis, it adopts the in-depth contextual and analytical approach of earlier editions and so considers the market, political, institutional, and international context of the regulatory and supervisory regime.

principal asset management aum: Local Currency Bonds and Infrastructure Finance in ASEAN+3

Asian Development Bank, 2015-07-01 The Asian Development Bank (ADB) is working closely with the Association of Southeast Asian Nations (ASEAN) and the People's Republic of China (PRC), Japan, and the Republic of Korea---collectively known as ASEAN+3---to develop local currency bond markets and facilitate regional bond market integration under the Asian Bond Markets Initiative (ABMI). ABMI was launched in 2002 to strengthen the resilience of the region's financial system by developing local currency bond markets as an alternative source to foreign currency-denominated, short-term bank loans for long-term investment financing. The need for infrastructure investment among ASEAN+3 members is well documented, with estimates for needed investment through 2020 reaching as high as \$550 billion. Local currency financing of infrastructure projects has the important advantage of avoiding the currency risk that can arise when a project generating revenues in the domestic currency has foreign currency-denominated debt service requirements. This study was undertaken under ABMI and funded by the Government of the PRC. It addresses two key questions: (i) Why is local currency bond financing not more widely used for infrastructure projects in ASEAN+3? and (ii) What can be done to promote infrastructure bond financing?

principal asset management aum: Our Lives in Their Portfolios

Brett Christophers, 2024-08-13 All hail the new masters of Capitalism: How asset managers acquired the world Banks have taken a backseat since the global financial crisis over a decade ago. Today, our new financial masters are asset managers, like Blackstone and BlackRock. And they don't just own financial assets. The roads we drive on; the pipes that supply our drinking water; the farmland that provides

our food; energy systems for electricity and heat; hospitals, schools, and even the homes in which many of us live—all now swell asset managers' bulging investment portfolios. As the owners of more and more of the basic building blocks of everyday life, asset managers shape the lives of each and every one of us in profound and disturbing ways. In this eye-opening follow-up to *Rentier Capitalism*, Brett Christophers peels back the veil on "asset manager society." Asset managers, he shows, are unlike traditional owners of housing and other essential infrastructure. Buying and selling these life-supporting assets at a dizzying pace, the crux of their business model is not long-term investment and careful custodianship but making quick profits for themselves and the investors that back them. In asset manager society, the natural and built environments that sustain us become one more vehicle for siphoning money from the many to the few.
