teacher and apple quotes: When Nobody Brings You an Apple Joseph Butts, 2012-04-02

This book is dedicated to teachers. The unsung heroes of our nation, our society, and our world as we know it. To the people that care without being cared for. Who love without sometimes being loved in return. And who give without any thought of receiving. This book was compiled and written to encourage and inspire our nation's teachers. You (they) are truly the backbone of our society whether society admits it or not. Teaching can be a very lonely profession at times. Even though you are constantly around children all day there are times when you can feel like you're the only person in the world. You work in isolation from your peers for most of the day, and the burdens of the world inside the classroom are solely on your shoulders. There is a great satisfaction. But there are many times that your efforts go unrewarded. And often, the fruits of your labor are delayed until times when you may or may not see them. You truly have to work by faith knowing that the seeds that you plant today will bring an abundant harvest in the future. And they do! This book is a pick-me-up for those days when you wonder if it is really all worth it. It is! This book is for teachers, principals, and support staff for those days when nobody brings you an apple.

teacher and apple quotes: Proactive Images for Pre-Service Teachers Jeremy Delamarter, 2019-03-23 This book provides tools to help pre-service teachers and teacher-preparation programs identify, evaluate, and respond to misaligned expectations early in the teacher-preparation sequence. Plato tells the story of prisoners who mistake the shadows on the wall of their cave for flesh-and-blood reality. These "shadow narratives" dominated their expectations, and when confronted with a three-dimensional reality that bore little resemblance to the shadows, the prisoners were blinded by the light. Surrounded by images and rhetoric that reduce the fullness of teaching to flat, two-dimensional representations, today's pre-service teachers tend to develop expectations of teaching that resemble the shadows more than they resemble reality. These misaligned expectations often lead to practice shock: the painful and disillusioning cognitive dissonance that comes about when unsustainable expectations collide with real-world practice. Intended as a proactive manual for mitigating practice shock, this book shines a light on the shadows by giving pre-service teachers the tools to examine, confront, and revise their own misaligned expectations of teaching before they reach the point of crisis.

teacher and apple quotes: *Coteaching in Teacher Education* Colette Murphy, 2025-02-28 This
book provides a concise and comprehensive overview of the practice of coteaching, including its
benefits and educational and social implications. Coteaching plays an important role in enhancing
the experience and effectiveness of pre-service and in-service teachers during school experience at a
time when teacher retention rates are a concern both nationally and internationally. Traditional
practice in school experience, generally comprising observation followed by complete take-over of
classes, has not altered in more than a century, despite significant changes in the role of the
teacher, the needs of students, the learning environment and the functioning of schools. Coteaching
provides a pedagogy which supports pre-service teachers more actively and promotes teacher
professional development, as they work together in co-planning, co-practice and co-evaluating
lessons during school-based experience. Co-teaching in Teacher Education is part of the successful

teacher and apple quotes: Drawing for Science Education Phyllis Katz, 2017-03-23 This
book argues for the essential use of drawing as a tool for science teaching and learning. The authors
are working in schools, universities, and continual science learning (CSL) settings around the world.
They have written of their experiences using a variety of prompts to encourage people to take pen to
paper and draw their thinking – sometimes direct observation and in other instances, their
memories. The result is a collection of research and essays that offer theory, techniques, outcomes,
and models for the reader. Young children have provided evidence of the perceptions that they have
accumulated from families and the media before they reach classrooms. Secondary students
describe their ideas of chemistry and physics. Teacher educators use drawings to consider the
progress of their undergraduates' understanding of science teaching and even their moral/ethical
responses to teaching about climate change. Museum visitors have drawn their understanding of the
physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has
been a critical tool to medical education and doctor-patient communications. Each chapter contains
samples, insights, and where applicable, analysis techniques. The chapters in this book should be
helpful to researchers and teachers alike, across the teaching and learning continuum. The sections
are divided by the kinds of activities for which drawing has historically been used in science

education: An instance of observation (Audubon, Linnaeus); A process (how plants grow over time, what happens when chemicals combine); Conceptions of what science is and who does it; Images of identity development in science teaching and learning.
