team mental health on russell: Issues in Providing Services to Trauma-Affected Veterans In and Out of Veterans Treatment Courts Faye S Taxman, Don Hummer, 2024-12-06 Justice-involved veterans face a number of challenges in the criminal-legal system, including receiving the proper care and treatment for trauma experienced during their service to the nation. This book examines novel approaches to care for veterans and identifies some of the barriers they face. One strategy toward ameliorating these challenges was the formation of specialized Veterans Treatment Courts (VTC) in 2008. Now numbering well over 600 courts nationwide, VTCs streamline the justice process and provide the necessary structure, services, and support to address the underlying issues behind their offending behaviors. The project upon which this volume is based involved in-depth interviews with 145 stakeholders in 20 geographically dispersed and characteristically unique VTCs in the United States. Interviewees included judges, court coordinators, prosecutors, treatment providers, defense counsel, probation officers, and others working as coordinated teams to provide a network of care enabling the justice-involved veterans to address their specific criminogenic needs and to promote behaviors resulting in subsequent desistance from crime. In addition to the voices of those working daily in the specialty court realm, the book also includes chapters on an issue that was broached often during semi-structured interviews: military sexual assault. Survivors of sexual abuse in the military report substantial trauma associated with in-service victimization, and these final chapters shed light on the extent of military sexual assault and its impacts on veterans as they transition to civilian life. This book will be an invaluable resource for scholars, researchers and practitioners of law, criminology and criminal justice, public affairs and psychology. It was originally published as a special issue of *Victims & Offenders*.

team mental health on russell: *The Cognitive Era in Sports Performance: Mental Fatigue, Cognitive Training, and Psychological Ergogenic Substances* Dalton de Lima-Junior, Samuele Maria Marcora, Fábio Yuzo Nakamura, Leonardo De Sousa Fortes, Thiago Ribeiro Lopes, 2025-09-08 In the past century, numerous articles have explored enhancing sports performance, primarily focusing on aspects such as physical training, fatigue, and physiological parameters. Nevertheless, in recent decades, there has been a notable recognition of the pivotal role played by cognitive parameters in achieving superior results. Over the last decade, the volume of articles specifically addressing mental fatigue has surged into the thousands. Consequently, various strategies aimed at mitigating its adverse effects have emerged in the literature. These strategies encompass cognitive training and the use of substances such as caffeine. Furthermore, it has been observed that these interventions may not only alleviate the negative impact of mental fatigue but also enhance performance concerning baseline values. Despite these advancements, a comprehensive

understanding of these phenomena remains elusive, and there is a pressing need for the development of a substantial body of evidence to unravel the intricacies involved.

team mental health on russell: Play in Hospitals Nicky Everett, Cath Hubbuck, Fraser Brown, 2023-04-10 Exploring how practitioners make use of play's developmental benefits and therapeutic healing properties to aid the child's healthcare journey, this reflective book expands and enhances the knowledge base underlying the practice of play in hospitals. The work of health play specialists and child life specialists in hospitals in the UK and around the world requires a deep level of clinical knowledge, so that preparing children for procedures can be done with skill and precision. It builds on an understanding of both child development and the impact of traumatic experiences so that children's deepest fears and biggest emotions can be faced without flinching. It also relies on an acceptance that play is the foundation of everything - the child's safest, most natural space - and from this trust, strength and resilience can grow and be nurtured. This new edited text explores the breadth, depth and skills of these trained healthcare practitioners providing play for babies, children, young people and adults, and places the power of play squarely at the centre of most clinical settings. Its starting point of the theory that underpins practice is explored and developed through a combination of reflective essays, case study chapters from the UK and around the world, and the newly emerging use of play in diverse settings. Drawing on the collective work of over 30 play specialists, child life specialists, play service managers, lecturers and researchers, this book is unique in all it offers to paediatric practitioners and settings, in training and in practice. It is an important resource for healthcare play specialists, playworkers, children's nurses, occupational therapists and more.

Merritts, 2017-03-30 This highly practical resource integrates the powerful dynamics of family into residential treatment and outdoors-based therapy for young people. Recognizing both the family as the systemic base for promoting change in adolescents and the therapeutic potential of the residential/wilderness setting, experts show how aligning the two can enhance the healing value of the program while promoting higher standards for care. Chapters describe innovative, science-based interventions and techniques for treating common behavioral and emotional problems along a continuum of family involvement and separation, to address issues affecting the family as well as the identified patient. With its accessible ideas and compelling case studies, the book ably demonstrates the critical role of family in adolescent patients' successful transition to post-treatment life. Among the topics covered: • A parallel process: home therapy while the adolescent or young adult is in residential care. • Intentional separation of families: increasing differentiation through wilderness therapy. • Emerging family therapy models utilized in residential settings. • Engaging families in Outdoor Behavioral Healthcare. • Research on coping skills used by youth with emotional and behavioral disorders. • Expanding our understanding of the place of family therapy in residential treatment. Family Therapy with Adolescents in Residential Treatment offers novel, exciting, and effective strategies and techniques for practitioners and mental health professionals particularly interested in family therapy with adolescents, and in related interventions and research.

team mental health on russell: Open Dialogue Around the World - Implementation,

Outcomes, Experiences, and Perspectives David Mosse, Raffaella Pocobello, Rob Saunders, Jaakko Seikkula, Sebastian von Peter, 2025-07-30 Open Dialogue (OD) is a low hierarchical, mental health service model that originated in Finland in the 1980s, following a change on two different levels: First, a culture of dialogical communication between staff, users, and caregivers was established. Secondly, community-based, multi-disciplinary teams were organized to offer primarily outpatient services. Immediate help in crisis, continuity of support by the same team, a low medication and primarily psychotherapeutically oriented approach are key principles of OD that have been further elaborated upon overtime during the past decades. OD promotes mutual trust and open exchange between the involved stakeholders. It is based on a mental health care epistemology that prioritizes human values, everyday relationships, and context-bound understandings over symptoms and clinical diagnostics. Transparency is of high value: All information is shared, and all voices are to be heard, thereby recognizing diversity and reflecting power differentials during the whole process of support. OD is now practiced in various regions around the globe, i.e. in several countries in Europe as well as in Australia, Japan, Latin America and the USA. Studies in Western Lapland demonstrated various outcomes, such as reducing the prevalence and incidence of so-called chronic mental illness, need for disability benefits and intake of neuroleptic medication while increasing functional remission and taking up work on the first labour market. However, these outcomes primarily originate in studies that have investigated the OD in countries of its origin leading to the question of whether they are transferrable to other healthcare contexts. This question is crucial since OD, varies internationally in its adaption to local health care systems and contingencies instead of representing a clearly demarcated intervention. This Research Topic is interested in gaining an international perspective on OD. It will assemble papers and contributions that report and comment on local OD practices, describe and analyze their outcomes and impact, and inform future directions worldwide. Manuscripts that are (co-)authored by peers, survivors, and user researchers are especially welcomed. All manuscripts will be peer-reviewed. We are interested in: - Qualitative, quantitative, and mixed-method original research on OD, reporting on empirical research, such as the results of intervention studies, clinical or pilot trials; - Systematic reviews or mini-reviews that summarize the results of empirical studies on OD; - Case reports that highlight an unexpected situation or outcome of an OD course of support; - Policy and practice reviews on local regulations and guidelines that are relevant for OD; - Hypotheses papers that present novel arguments, interpretations or theoretical models in relation to OD; - Perspective articles that present a viewpoint on a specific area of investigation in relation to OD; - Conceptual analysis articles that explore the concepts and issues behind OD; - Papers on training and instructions that describe innovative curricula, courses and teaching formats concerning OD; - Data report, presenting a description or a research dataset on OD; - Brief research report that presents original research and/or preliminary findings on OD with fewer detail; - Commentary and opinion papers that provide critical comments or contribute viewpoints on recent research findings.
