teanda foster physical therapist: International Partnerships for Strengthening Health Care Workforce Capacity: Models of Collaborative Education Jeanne Mahoney Leffers, Jennifer Gail Audette, Kevin S. Hardwick, William Van Cleve, 2018-07-31 A critical problem in resource-scarce countries across the globe is the shortage of appropriately trained health care providers. According to the World Health Organization, the current global health workforce shortage of 7.2 million providers is estimated to increase to 12.9 million by 2035. This disproportionately affects resource-scarce countries, denying basic health care to millions and limiting access to life-saving treatments. Due to limited resources in these countries, not enough health professionals receive training, few have the opportunity for continuing education, and the ability to develop or implement educational programs and curricula is constrained. Additionally, many existing providers choose to emigrate in pursuit of professional advancement opportunities, contributing to the overall shortage of qualified health care providers in these environments. Efforts to strengthen health workforce capacity not only increases access, safety and availability of care, but is critical to building resilient health systems capable of caring for the world's neediest populations. This requires not only cultivating new health care providers, but also providing ongoing professional development to retain and support current providers, advancing the level of practice in accordance with current clinical science, cultivating educators, and enhancing training curricula. It is critical also to contribute to the limited body of research documenting the effectiveness and impact of various models of collaborative education and partnership to improve health worker training and retention. This Research Topic examines strategies for building health workforce capacity through the prism of educational partnerships, offering significant examples of effective models of international collaborative education as well as insight and guidance on the structure and operation of successful global partnerships. Collectively, the 31 articles accepted and included in this eBook represent a diversity of health professions and geographies across academic, non-governmental organizations and other global partnership forms. The published manuscripts highlight various

elements of partnerships with several consistent themes emerging: capacity building, local empowerment, mutual trust and respect, long-term commitment, equity, collaboration, and the importance of integrating theory and practice, for a balance of academic and clinical development. The manuscripts provide examples of partnership and educational programs that are in the formative, early stages of implementation and others which have been sustained long term, some for decades. The following eBook is divided into two parts, with each part broken down into sections. Part I of the eBook includes 18 manuscripts that showcase long-term educational programs that strongly exemplify multiple, foundational aspects of international partnerships in education including mutual collaboration and project management, empowerment of host partners to lead and sustain programs, and capacity building. While individual manuscripts included in Part I look broadly at multiple aspects of successful, international partnerships in education, Part II manuscripts focus intently on one-two elements. Part II includes 13 articles that highlight partnership through short- rather than long-term educational initiatives as well as program development and broad academic partnerships. This Research Topic was sponsored by Health Volunteers Overseas – a United States based non-profit that collaborates with over eighty international universities and health institutions to send volunteer health professionals to low-resource countries to provide continuing education, train the trainer courses, professional support, and consultation on academic program and curricula development.

Led by renowned expert Rosemary Crouch, this edition embraces an inclusive perspective on human functionality, social inclusion, and participation in everyday life. Highlighting the pressing need for occupational therapy's role in addressing the burden of mental health disorders, it forecasts the staggering economic impact and emphasises prevention, resilience-building, and adaptive participation in daily activities. Featuring thirty interconnected chapters by seasoned practitioners and academics, this book: Aligns with international mental health standards and sustainable development policies, emphasising universal health access and human rights Covers key aspects of occupational therapy, exploring theoretical perspectives for mental health care practice, ethical considerations and cultural sensitivity, advocating for occupational justice, and breaking barriers in mental health care Introduces case studies and reflective questions at the end of each chapter to foster the integration of theory with practical application for different age groups Reflects upon emerging trends such as human ecosystem disruptions, spirituality and mental health, the impact of trauma on individuals and collectives, and maternal mental health concerns Crouch and Alers Occupational Therapy in Psychiatry and Mental Health is ideal for occupational therapy students and newly qualified practitioners, as well as any health professional looking for an up-to-date, evidence-based resource on this aspect of mental health care.

teanda foster physical therapist: Conservation in the 21st Century: Gorillas as a Case Study T.S. Stoinski, H. D. Steklis, P.T. Mehlman, 2009-07-09 Like other fields of science, wildlife conservation is a changing field. Threats facing wild populations of apes and other species, say 20 years ago, are likely not the same ones most pressing today, and even where threats have remained unchanged, more effective means of addressing them may be available now. Conservation scientists have learned from many years of experience, and both theoretical and technological advances today provide conservation tools not available in the past. This volume identifies the primary problems faced in conserving wild populations of gorillas throughout Africa, pinpointing new approaches to solving these problems and outlining the increased role that zoos can play in gorilla conservation. It includes expertise of field scientists in a variety of disciplines to discuss current conservation threats, novel approaches to conservation, and potential solutions.

teanda foster physical therapist: Women, Armed Conflict and International Law Judith G. Gardam, Michelle J. Jarvis, 2021-08-04 The role that gender plays in determining the experience of those caught up in armed conflict has long been overlooked. Moreover, the extent to which gender influences the international legal regime designed to address the humanitarian problems arising from armed conflict has similarly been ignored. In the early 1990s, prompted by extensive media coverage of the rape of women during the conflict in Bosnia Herzegovina, the international community was forced to critically examine the capacity of international law to respond to such crimes. The prevalence of sexual violence, is, however, merely one aspect of the distinctive impact of conflict on women. Although a range of factors influence the way individual women experience armed conflict, the endemic gender discrimination that exists in all societies is a common theme: from Cambodia, where women land-mine victims are less likely to receive treatment for their injuries than are men; to South Africa, where women widowed during the Apartheid years have become outcasts in their own society. To date, the extent to which international law addresses the myriad of

ways in which women are affected by armed conflict has received little attention. This work takes the experience of women of armed conflict, matches it with existing provisions of international law, and investigates reasons for the silence of the latter in relation to these events for women. It is the first broad-based critique of international humanitarian law from a gender perspective. The contribution of the United Nations, through its focus on human rights, to improving the protection of women in armed conflict is also considered. The authors underscore the need for new approaches to the issue of women and armed conflict, and canvass a range of options for moving forward.

teanda foster physical therapist: Counseling and Coaching in Times of Crisis and Transition Laura Nota, Salvatore Soresi, 2017-08-10 Counseling and Coaching in Times of Crisis and Transition explores how threats and challenges caused by rapid social and technological changes require counselors and coaches to rethink their usual ways of working, and, in some cases, even abandon their traditional theoretical anchors. The authors of this forward-thinking book argue that practitioners who aim to help others strengthen their resources can no longer afford to wait for clients in their offices or offer them protected, objective and neutral professional relationships. Contributors from around the world argue that there is a real need for new counseling and coaching actions to be delivered in different contexts: counselors and coaches should be able to use heterogeneous languages and interventions, as well as numerous relationship modalities and activities in order to streamline the support that they offer to people in sectors as diverse as health and well-being, life and career design, prevention and community inclusion, work inclusion, and schools. The book provides an evidence-based framework, with numerous counseling and coaching examples that are capable of promoting people's strengths, whether this be face-to-face, in groups, or online. This book will appeal to academics, researchers and postgraduate students in the fields of counseling and coaching, as well as those with an interest in psychological, social and educational science. It should also be essential reading for practitioners and policymakers in a diverse range of contexts, including those working on intervention and support for vulnerable people, non-traditional and disadvantaged students, and people with disabilities.

teanda foster physical therapist: Helping Skills for Social Work Direct Practice Jacqueline Corcoran, 2011-09-29 Direct practice foundation courses in social work prepare students for every step of the problem-solving process, yet too often emphasize the what and the why of practice at the expense of the how. This practical, easy-to-use, and hands-on guide bridges this gap by illustrating the helping skills that practitioners can actually use to influence people's lives in positive ways. Integrating two major helping models--motivational interviewing and solution-focused therapy--it equips students with the techniques and skills necessary for activating client strengths throughout the problem-solving process. Helping Skills for Social Work Direct Practice presents a wealth of sample dialogue, exercises, tips, and do's and don'ts, all designed to encourage learning by doing. This workbook helps make the links between theory and practice with these unique features: - Chapters logically organized by phases of the problem-solving process - Case demonstrations involving a variety of roles, including case manager, crisis intervention counselor, medical social worker, and school social worker - Practice exercises that prompt students to apply and generalize skills to different practice settings and client problems - Exhibits and reflection questions facilitate integration between classroom learning and the internship experience - An online instructor's

manual (www.oup.com/us/helpingskills) with detailed answers to discussion questions From the first meeting with clients, to assessment, goal-setting, evaluation, and the ethics that guide the process throughout, this is the nuts-and-bolts guide to helping clients using a strengths-based perspective.

teanda foster physical therapist: Africa and Sustainable Global Value Chains Regina Frei, Sherwat Ibrahim, Temidayo Akenroye, 2022-02-07 This book contains a collection of studies on the interactions between businesses in Africa and Global Value Chains (GVCs) in terms of social, environmental and economic sustainability. This is particularly pertinent given the asymmetrical power distribution between the global buyer and the African supplier, their governance relationships and the ongoing competitive pressures to reduce costs and increase flexibility to meet GVC demands. Rather than focusing on the sustainability of a single organization, GVCs address the sustainability of inter-firm value chains and global industries as a whole. With little differentiation between value chain creation and social / environmental degradation extending to people and raw material extraction (upstream) and disposal or recycling (downstream), sustainability issues need to be at the forefront of African business research interests. Nowadays, sustainability is considered a competitive advantage for a firm looking to join a GVC. Whether sustainability is approached from the viewpoint of an exporting firm motivated to join a GVC in its respective industry or whether a firm's continuing contractual or collaborative relationship with a buyer depends on its compliance with sustainability standards, both approaches focus on the ability of firms in Africa to benefit from joining sustainable GVCs.

teanda foster physical therapist: Encyclopedia of Trauma Charles R. Figley, 2012-06-19 Trauma is defined as a sudden, potentially deadly experience, often leaving lasting, troubling memories. Traumatology (the study of trauma, its effects, and methods to modify effects) is exploding in terms of published works and expanding in terms of scope. Originally a narrow specialty within emergency medicine, the field now extends to trauma psychology, military psychiatry and behavioral health, post-traumatic stress and stress disorders, trauma social work, disaster mental health, and, most recently, the subfield of history and trauma, with sociohistorical examination of long-term effects and meanings of major traumas experienced by whole communities and nations, both natural (Pompeii, Hurricane Katrina) and man-made (the Holocaust, 9/11). One reason for this expansion involves important scientific breakthroughs in detecting the neurobiology of trauma that is connecting biology with human behavior, which in turn, is applicable to all fields involving human thought and response, including but not limited to psychiatry, medicine and the health sciences, the social and behavioral sciences, the humanities, and law. Researchers within these fields and more can contribute to a universal understanding of immediate and long-term consequences-both good and bad-of trauma, both for individuals and for broader communities and institutions. Trauma encyclopedias published to date all center around psychological trauma and its emotional effects on the individual as a disabling or mental disorder requiring mental health services. This element is vital and has benefited from scientific and professional breakthroughs in theory, research, and applications. Our encyclopedia certainly will cover this central element, but our expanded conceptualization will include the other disciplines and will move beyond the individual.

teanda foster physical therapist: The Door of Last Resort Frances Ward, 2013-03-14 Having spent decades in urban clinical practice while working simultaneously as an academic administrator, teacher, and writer, Frances Ward is especially well equipped to analyze the American health care system. In this memoir, she explores the practice of nurse practitioners through her experiences in Newark and Camden, New Jersey, and in north Philadelphia. Ward views nurse practitioners as important providers of primary health care (including the prevention of and attention to the root causes of ill health) in independent practice and as equal members of professional teams of physicians, registered nurses, and other health care personnel. She describes the education of nurse practitioners, their scope of practice, their abilities to prescribe medications and diagnostic tests,

and their overall management of patients' acute and chronic illnesses. Also explored are the battles that nurse practitioners have waged to win the right to practice—battles with physicians, health insurance companies, and even other nurses. *The Door of Last Resort*, though informed by Ward's experiences, is not a traditional memoir. Rather, it explores issues in primary health care delivery to poor, urban populations from the perspective of nurse practitioners and is intended to be their voice. In doing so, it investigates the factors affecting health care delivery in the United States that have remained obscure throughout the current national debate

teanda foster physical therapist: *The Oxford Handbook of Poverty and Child Development* Valerie Maholmes, Ph.D., CAS Ph.D., Rosalind B. King, Ph.D., 2012-04-01 Over 15 million children live in families subsisting below the federal poverty level, and there are nearly 4 million more children living in poverty today than in the turn of the 21st century. When compared to their more affluent counterparts, children living in fragile circumstances—including homeless children, children in foster care, and children living in families affected by chronic physical or mental health problems—are more likely to have low academic achievement, to drop out of school, and to have health and behavioral problems. *The Oxford Handbook of Poverty and Child Development* provides a comprehensive analysis of the mechanisms through which socioeconomic, cultural, familial, and community-level factors impact the early and long-term cognitive, neurobiological, socio-emotional, and physical development of children living in poverty. Leading contributors from various disciplines review basic and applied multidisciplinary research and propose questions and answers regarding the short and long-term impact of poverty, contexts and policies on child developmental trajectories. In addition, the book features analyses involving diverse children of all ages, particularly those from understudied groups (e.g. Pacific Islanders, Native Americans, immigrants) and those from understudied geographic areas (e.g., the rural U.S; international humanitarian settings). Each of the 7 sections begins with an overview of basic biological and behavioral research on child development and poverty, followed by applied analyses of contemporary issues that are currently at the heart of public debates on child health and well-being, and concluded with suggestions for policy reform. Through collaborative, interdisciplinary research, this book identifies the most pressing scientific issues involving poverty and child development, and offers new ideas and research questions that could lead us to develop a new science of research that is multidisciplinary, longitudinal, and that embraces an ecological approach to the study of child development.

teanda foster physical therapist: *Issues in Aging* Mark Novak, 2015-07-22 Opportunities and optimism in Aging. *Issues in Aging*, 3rd edition takes an optimistic view of aging and human potential in later life. This book presents the most up-to-date facts on aging today, the issues raised by these facts, and the societal and individual responses that will create a successful old age for us all. Mark Novak presents the full picture of aging--exhibiting both the problems and the opportunities that accompany older age. The text illustrates how generations are dependent on one another and how social conditions affect both the individual and social institutions. Learning Goals -Upon completing this book, readers will be able to: -Understand how large-scale social issues--social attitudes, the study of aging, and demographic issues--affect individuals and social institutions -Identify the political responses to aging and how individuals can create a better old age for themselves and the people they know -Separate the myths from the realities of aging -Recognize the human side of aging -Trace the transformation of pension plans, health, and opportunities for personal expression and social engagement to the new ecology of aging today
