tears are a language song: The Language of Tears David Runcorn, 2018-07-30 Tears are a common experience we rarely discuss, and then only in relation to pain and loss. David Runcorn draws upon a long Christian tradition of seeing tears as a gift to explore their deeper meaning and purpose, their place in human life and their significance for prayer and spirituality. In the early centuries of the church tears were regarded as an extension of baptism or a gift of the Spirit. They were integral to prayer and a vital part of human integration and maturing. Jesus said that those who mourn were 'blessed'. The Language of Tears explores how tears are a natural and important way of processing loss, uncertainty and anxiety, drawing upon theology, scripture, psychology and biology. This accessible and sensitive guide is for all engaged in spiritual direction, counselling or pastoral care.

tears are a language song: *Pastor's Musings* Rev. Mario Perez, 2021-07-28 According to most dictionaries, "Musings" are periods of reflection or thought. After so many years of living (a lot of years!) I've been able to experience God in so many incredible ways. In my Family, my Marriage, my Kids and Grandkids, my Ministry and my Music. Call me simple, but I look for God in all activity in my life. From my greatest victories to the most horrible failures, God has been right there in the mix. Nothing happens to me without Him knowing about it. There are still plenty of things I cannot figure out: Why does the creator of the universe who named all the stars think about me - and why so often? Why does He lavish such love on me? Why is He working behind the scenes orchestrating all things for my own good. I just don't get it. You? There I go again 'Musing'. That's the story of my life. Enjoy my Musings; hopefully they will bring a smile, an "LOL" or a tear as you read some of my most intimate moments with God.

tears are a language song: *Tears* MD Hseham, 2025-07-27 This book explores the profound meaning behind tears—far beyond water and salt. From the first cry at birth to the final tears at life's end, it reveals how tears speak when words fail, carrying stories of joy, sorrow, love, and release. Through science, we learn that emotional tears contain stress hormones and natural painkillers, serving as both a physical and emotional relief. The book journeys through cultural traditions—Roman tear vials, Hindu rituals, Christian prayers—and poetic symbols in art, music, and literature. It uncovers myths, spiritual meanings, and how tears unite people in grief and beauty. While animals do not shed emotional tears like humans, their grief behaviors remind us of shared bonds. Ultimately, tears emerge as universal messengers of connection, honesty, and healing. They are not signs of weakness but proof of life's depth—a silent language that dares to feel when words cannot.

tears are a language song: Tears of Longing Christine Yano, 2002-07-01 Enka, a sentimental ballad genre, epitomizes for many the *nihonjin no kokoro* (heart/soul of Japanese). To older members of the Japanese public, who constitute enka's primary audience, this music—of parted lovers, long unseen rural hometowns, and self-sacrificing mothers—evokes a direct connection to the traditional roots of "Japaneseness." Overlooked in this emotional invocation of the past, however, are the powerful commercial forces that, since the 1970s, have shaped the consumption of enka and its version of national identity. Informed by theories of nostalgia, collective memory, cultural nationalism, and gender, this book draws on the author's extensive fieldwork in probing the practice of identity-making and the processes at work when Japan becomes "Japan."

tears are a language song: Structure Discovery in Natural Language Chris Biemann, 2011-12-08 Current language technology is dominated by approaches that either enumerate a large set of rules, or are focused on a large amount of manually labelled data. The creation of both is time-consuming and expensive, which is commonly thought to be the reason why automated natural language understanding has still not made its way into "real-life" applications yet. This book sets an ambitious goal: to shift the development of language processing systems to a much more automated setting than previous works. A new approach is defined: what if computers analysed large samples of language data on their own, identifying structural regularities that perform the necessary abstractions and generalisations in order to better understand language in the process? After defining the framework of Structure Discovery and shedding light on the nature and the graphic

structure of natural language data, several procedures are described that do exactly this: let the computer discover structures without supervision in order to boost the performance of language technology applications. Here, multilingual documents are sorted by language, word classes are identified, and semantic ambiguities are discovered and resolved without using a dictionary or other explicit human input. The book concludes with an outlook on the possibilities implied by this paradigm and sets the methods in perspective to human computer interaction. The target audience are academics on all levels (undergraduate and graduate students, lecturers and professors) working in the fields of natural language processing and computational linguistics, as well as natural language engineers who are seeking to improve their systems.

tears are a language song: Heidegger and Language Jeffrey Powell, 2013-02-07 The essays collected in this volume take a new look at the role of language in the thought of Martin Heidegger to reassess its significance for contemporary philosophy. They consider such topics as Heidegger's engagement with the Greeks, expression in language, poetry, the language of art and politics, and the question of truth. Heidegger left his unique stamp on language, giving it its own force and shape, especially with reference to concepts such as Dasein, understanding, and attunement, which have a distinctive place in his philosophy.

tears are a language song: Reading Time in Music Sarah Cash, 2023-03-27 In this book, Sarah Cash examines the intersection of music and temporality in British literature of the long nineteenth century. The sound spaces created at these intersections function as antimimetic resistance to hegemonic structures. Through its temporal multiplicity, music resonates in excess of linear time, revealing a metaphoric soundedness in the text that subverts reader expectation and reveals how seemingly realist nineteenth-century novels transgress the limitations of their classic narratological structures. In even the most apparently realist texts, the most extravagant, excessive, and hyperbolic elements exceed the bounds of what we often consider real, disrupting mimetic bias. Cash argues that music offers the most dynamic way to expose this vexed temporality in the text. Through scholarly intervention a disruption of historic classifications show that Victorians are heirs of Romanticism's musical ideals, including the power of music to penetrate and transform space and time and the permanence of sound as it reverberates beyond human perception. Scholars of nineteenth-century literature, temporality, and gender studies will find this book of particular interest.

tears are a language song: God in the Fray Walter Brueggemann, Tod Linafelt, Timothy Kandler Beal, This volume engages the work of Walter Brueggemann, most of which has been published by Fortress Press. The volume centers on the character of God in the text of the Old Testament as a site of theological tension and even ambivalence. Biblical faith never experiences God as entirely above the fray but rather as entangled in history, astonishingly transformative, and impinged upon by the voices of the suffering. Brueggemann's monumental *Theology of the Old Testament* addresses this fact with great theological insight and rigor, and the internationally renowned biblical scholars writing here engage and extend his insights into the unsettled Character . . . at the center of the text.
